I had searched the Internet, got a flic CD ROM and and saw the IBM's play AVI (not so smootly with sound) I wanted do do this on my beloved bird. I know the Falcon could do it because I saw the ARE YOU DEMO and Mouse.prg demos of animation with sound.

Well, I have some news and a simple method to trigger several samples from within Apex Media. The method is so simple that it does not require any extra programs or hardware! Here is how:

1-Enhable the SAM.PRG that should be in your AUTO Folder and also the SAMFIG.ACC on the root directory.
2-Call the SAM Setup ACC and click on Extras.
3-Select "Define Keys"
4-Select "New key Set" and name the key set.
5-Press the key you want to assign the sample to and click the mouse button.
6-Now you will see the name of your key set on the "Current Key Sets" window
7-Click OK

NOTE: You can create any number of sets containing one or more keys, but to stay simple just define a set with one key for now.

8-Scroll the System Events Window to find the set you just created.
9- Assign the Sample by selecting it from the "Sound Assignment window, click OK

SAM may need to reconfigure the memory buffer and you may need to reboot your computer for the samples to be activated. Use the

built in Recording feature to record your own samples.

Please read the instructions on the Atari System Audio Manager manual.

Once you EXIT the SAM Setup Acc. you will be able to play the samples by pressing the keys you assigned the samples to. You can play this samples from within any program.

Load Apex Media and load a FLI/FLH animation and press your sample Key. Surprise! You have got Sound and Video. Your Falcon is a great machine!

Also you can play another sample on the fly. Try it, works very smoothly. I have played samples 1 minute long and even changed resolutions and the sample kept going without a glitch.

I hope you find this tips fun and helpful.

Raymond Lohengrin Tue September 5 1995

NOTE: I use a sampling frequency of 20Khz in 8 bits MONO to save Disk space. This is the same rate that is use in IBM multimedia CD's

Me too. I'm not even thinking about selling it, although it always
hurts to walk into a huge computer store and see pentia almost for
nothing.

In fact, I'm going to order N.AES and have lots of fun with my Falcon
for many many years to come. I might buy a Falcon clone, when that
ever arrives (juest read about a Wizztronics project...). A Speedup
or an FX card will most probably find a place in my Tower case, as
well as a nice SCSI harddisk and maybe a CD-ROM player.

Regards, and keep on Falconing!

Yes, it does. The video system of the Falcon is not toughed in any way.

> Is there an option to switch back to the 030? Devpack's Mon
> will not run on an 040.
No, you cannot switch back. You COULD if you put in a switcher and put
your solding iron to some SMD-pins at the 68030...:-(

> How is the 030 disabled? Are the PAL's for the 68000 bus master

Charlie Mike wrote:
>
> Hi,
> Please anyone tell me is there a way to fix the sequence of programs
> being loaded from the AUTO folder? Thanks.
>
There are several free/shareware programs about which will allow you
to sort your Auto folder (autosort comes to mind). Neodesk (tm) from
Gribnif has this facility built in.
Failing that, rename your Auto folder to something else, create a
new Auto folder, then copy/move the programs over one by one in the
order in which you want them to execute, as TOS/GEM execute Auto
programs in the order in which they appear in the Auto folder.
Finally, delete the old folder.

Hope this is of some help

Two weeks ago, Steve Cohen said that they should have the cache work back from the manufacture soon. He also stated that the Hawk runs faster than the Barracuda did (yes, they do have prototypes that work, but not on all Falcons). I have a GE-Soft product now, and after the problems I have had with it, and the lack of support, I will also wait a little longer. The 040 sounds nice, but so does the Video Funnel and the upgrade policy for the Hawk. Buy one and get a trade in allowance on the Barracuda, or more likely, their Falcon clone (Steve said they have a prototype board that works and is much smaller than the Atari Falcon board). Yes, you read that correctly, a Falcon clone, not a 3.xx clone.

>Afterburner hasn't been approved by Steinberg yet and my greatest
concern is

Probably very wise :).

In the mean time I'll go for a CD-ROM writer
>instead ;) -a Philips CDD2000, together with SoundPool's CDRecorder Pro
>software for the Falcon. It will all be delivered in about 2 weeks from
now.

I know that CDRecorder does not advertise for the HP W/R CD-Rom, (as of yet), but HP has a 4x/2x? recorder for $999.00. What is the price for the Philips? (I think I mailed you a while ago on this, and now have seen the ad in the PC Trader for the drive).

>Then I can start making both music and data CD's - as well as fool-proof
>backups of the hard disks :)))))))

Speeking of backups, my Linux just finished installing on my Falcon. (again):).

From: mbecroft@iconz.co.nz
Message-ID: <4akrr1$2tt@status.gen.nz>
Source record: 154638

I will need to access my email and usenet via uucp in the near future,
and would like some advice on what software to use, and how to set it up.

I recently downloaded UUCPPoint-Light, but the documentation and
programme was in German. With my extremely limited understanding of
German, I was at a loss as to what some of the options and text entry
fields did. To make matters worse, I have no way of testing UUCP until
UUCP is my only email and usenet access!

Perhaps some poeple experienced with UUCP may be able to suggest what
software I need, and how to set it up?

Thanks for any help.

Hello!

After discovering the amount of shareware on the Net I happily started
downloading. I loaded down to a UNIX workstation, unzipped the files and
copied the files to disk with softwin_std PC emulator.

Now I'm experiencing a problem I've never seen before:
When trying to copy files to a disk, the ST can tell me there is no space
left on the disk, but when I check it out, the disk info box shows that
(in the worst case) 99K is used and that 82K is remaining...

Does anybody know what this is?
There was _some_ problems with directories made on the UNIX machine,
not deleting the files in the directory when deleting it, but in the case
above, the one archive file was the only item on the disk, and located
in the root. The disks were formatted on the ST, not the UNIX.

I'm thankful for all help...

In comp.sys.atari.st you write:
>Jeepers, you learn something every day. I had assumed that this job would
>have been as difficult as speech-recognition what with chords, arpeggios
>and fast runs of overlapping notes.
These systems are usually based on a hexaphonic pickup, ie a separate
pickup for each string. So (for each string) the sound to be analysed
is monophonic. Most systems can transmit in MIDI Mono mode, ie each
string on a different MIDI channel.

I used to have a MIDI guitar, and it worked quite well. As with all
pitch-to-MIDI systems, there has to be some delay while the detectors
work out at what frequency a string is vibrating. That's the most
difficult part for a player; getting used to the delay.

PS Can you fix your subject lines? Whatever you post about comes out
as FIST FTN/Demon Gateway Message.

The "emergency" way is to move all the AUTO programs to somewhere else
temporarily. Now you move them back one at a time in the order you
want them run.

A better way is to get hold of an auto folder sorting program. I don't
know where to find one online but I can email you one I've been using
reliably for yonks if you like.

I am cleaning house and have decided to part with the following Atari equipment:

Mega 2 ST with 4MB Ram upgrade & Tweety-Board sound card & PC-Speed PC Emulator
20MB Seagate Hard Drive/5.25" Floppy External Unit
Spectre GCR Mac Emulator
Cable for Mitsubishi Multi-Scan monitor (allows B&W and Color Display on one monitor)
Tons of software/books (some with original packaging)

Also:

130XE 8-bit computer
1050 Floppy Drive
Touch Tablet
Software/books (some in original packaging)

All are as is (it was working when it was last powered up 3 years ago). Best offers for all or part of the above package. Contact ttmong@aol.com

It's a cool toy, if you can afford it. With the CAT box,
it makes a nice addition to multimedia work on the Falcon
with Expose. I don't think I can be considered a pirate for
grabbing images off VLM from music CD's, or can I? It dosen't
have the PlayStation's software, but then again, the Sony dosen't have
RGB, and to me that is an important feature. The Hacking on it's (JAGS)
hardware has already started, so if Atari gives up, I think you
will see more "Falcon-Jag" interfaces being developed (hacked).
That would be fine by me.

Mike

>they will load and run in that order, dont ask me how! :), but they will:)

TOS scans the auto folder an entry at a time in the physical order it
finds them on the disk (unsorted option from some desktops).
Transferring files into an empty auto folder one at a time causes it
use use the first entry first, the second second, and so on.

Why on earth they originally didn't just make it look for a text file
AUTOLIST.DAT and read files in the order stored in that I'll never
know. Heck, they could even have called it CONFIG.SYS.

;-)(<- can't make my mind up!

Hi Boris,

The program is called Bob's Calltime and the latest version I have was
copywrite 1990, and version 3.

The program does work, and is configurable to your time zone of course.
I believe the program is up on any of the online services here in the states,
or any good bbs. calltim3.LZH or arc.

I've no idea what archeive it's on, but maybe knowing the name will help.

Hi Andy. I have had pretty good luck with the WWW115 package, but
experience the EXACT problem as you. Some forms work, and
some (STFormat) don't. That's two for two.

The last couple of post were spoken with the most
positive attitude I've seen here in a while.
Thank you all very much, nice reading.

I just purchased the Linux68K CD. Soooo
I decided to set aside my 540 Quantum for the installation.
I was warned, and I went ahead and did it any way, installed
over my photo and animation files (350mb and no b/u). Oh well,
new user's be warned.

On the second try, and after I fell asleep at about 3am, the
installation completed itself. The next morning I tried to
enter "su" to edit the keyboard file from German to U.S. and
got the response that the file was not present. I was following
the article in one of the Atari UK mag's. I decided to pass on that
and just boot Linux. All looked well until it tried to read the
mouse and then I got an error that it couldn't find it. I'm
using keyboard Gizzmo with a PC Keyboard on my Falcon. Mabey that's
the problem.
Another oddity, the prompt, which I am told should be a pound
sign, has the ~ before it. Is that correct?

Thanks for any help

Mike

: I just love how people will worship a new game system, saying it's the
: world's greatest, when it's not even out yet.

I agree here ... especially when it comes to the Ultra 64. While Nintendo is known for excellent marketing and good games, they have never been innovative in terms of hardware. The NES wasn't the first console to feature computer quality graphics (the Atari 7800 was), the Gameboy debuted at the same CES as the Lynx ('nuff said), the Super NES came out two years later than the Genesis, yet in all that time they barely improved on the Genesis. Couple that with Nintendo's crappy business tactics which border on illegal and one wonders how people can be lauding everything that Nintendo does.

I doubt that very much, when Minter came out with Colourspace for the
8-bit Atari, the ad said you can use it for video presentations. The
music is copyright, but not the images.

If you can hack it and add new products while the company no longer
supports it, than it's an Atari :)

I would rather see "STe-Jag" Interfaces as well. Wouldn't be cool if you
can use the ST to load and store Jag PD games? Heck, I would love to
interface VLM with Trip-A-Tron :)

As standard there are 3 targets for GNU C, gcc itself, g++ (the C++
compiler) and objective-C. Making them all is the default action for
the makefile that comes with GNU C.

I'm not sure if the a.a.u.e version of GCC makes in the same way (from
source), but if I remmeber correctly, if you're using MiNT/Linux the
standard C source compiles without too many problems.

ATB,
Simon.

: Atari seems like it's constantly retreating. They retreated from the computer
: industry to go back to video games. Now, there's talk that they'll retreat
: from that and go to PC software. I just wish they'll make a stand and go
: all out....

Seems to me like that is what they did with the Jaguar. They
dropped everything to support it. They pursued developers and retail
chains agressively. They advertised like never before ($300K was spent
pushing the 7800, $25 million has been spent on the Jaguar so far) and
they made a lot of good changes within the company. Unfortunately, their
resources are too limited to compete with the giants.

3688. MEGA STe for sale (! UK !)

Newsgroup: comp.sys.atari.st
Date: 1995-12-13 00:00:00 UTC
From: Matt Stroh <M.J.Stroh@shef.ac.uk>
Message-ID: <4amb5s$1fr@hippo.shef.ac.uk>
Source record: 154495
Cross-posted to: comp.sys.atari.st,uk.forsale

I had to do it eventually... I've become a PCer I'm afraid, and need to clear some space at home, and get some more bits for the PC at this early stage, so the trusty STe will finally have to go)-:

* For sale *

Mega STe - has 16mhz processor, 4mb RAM, internal high density floppy, and tos 2.06. Also has internal 50mb hard disk, and 'external' keyboard (i.e PC style desktop case). Has internal modulator so can be plugged straight into TV, and has a scart cable for good quality on SCART-plugged TVs.

Monitor: sm124 - hi-res mono monitor

Naksha mouse (and I think an old Atari mouse in the box too)

External Floppy Drive - Power Computing DOUBLE density - has BLITZ copying software for easy copying of disks.

Software: includes Pagestream DTP (2.2); first word plus; monkey island (still the best - runs in hi-res even!); and others.

Please e-mail sensible offers. Cost a fortune a fair while back, and all lovingly cared for and served me well! I'd rather not split as it makes a great complete system. Would also consider selling my Canon BJ-10 printer (with optional sheet feeder) as part of package...

I live in Sheffield but can probably deliver to the London/Hertfordshire area too. Would rather buyer collects or I deliver it so they can see it all working, though.

Cheers,

Matt.

3689. Re: The Future Of Atari

Newsgroup: comp.sys.atari.st
Date: 1995-12-13 00:00:00 UTC
From: mrathwel@uoguelph.ca
Message-ID: <4aljtt$dga@ccshst05.cs.uoguelph.ca>
Source record: 154496

: Yeah, of course, we heard the same thing two years ago with the Falcon;
: Atari would promote the Jag because they can make money there to support
: the computer line; development is just "on ice"; they will not give up
: the computer line etc. etc. I Am sick of all this official Atari crap.

Incorrect. Atari said that is what they hoped to do, but made no
promises. I recognize Atari's mistakes, but I am sick of bullshit rumours.

: Fact is, the Jaguar has worldwide no market position wahts however

Yeah ... according to who?

; sales
: are by far inferior to their competition

Really? Atari has sold about 250,000 Jaguars in the US. Sega has
sold 150,000 Saturns. Sony has sold 300,000 Playstations. About 300,000
3DO's exist in the US. I'd hardly call Jaguar sales (in North America
anyway) far inferior.

, and in some parts of the world
: (i.e. 99%) the Jaguar doesn't even exist

True, though what would you have them do? Spread their tiny
resources over the entire world. There's no law saying that you have to
sell everywhere and frankly, it isn't good business sense to spread
yourself out over an entire world so quickly.

: Certain projects, such as the Sigma card for PCs, are never heard of
: again.

The Sigma card wasn't an Atari product. It was made by a 3rd
party developer. It was probably axed because their 3DO card wasn't a
success.

And even such simole things as a CDROM drive take year to come
: out.

If you had a company of 100 people, what would you do to improve
things? Atari is very dependent on outside sources.

Most of the people doing support and (hardware) development on the
: Jag have been fired. I am ABSOLUTELY CERTATIN that here we will never see
: the Jaguar in the stores in fair amounts.

Depends on where you live. I see lots of Jaguars, Jaguar games
and Jaguar CD's where I live.

: the dropping of the computer line was a major error, such as the decision
: to leave Continental Europe where they had the biggest market share.

I agree with you here.

: IMHO Atari will do it as with the computers; they will makethe transition
: to PC games manufacturer and until they didn't complete this task, they
: will make the people believe, they are still behind the Jaguar. This
: transition will probably take a year, but i do not expect Atari pushing
: the Jag by the beginning of 97.

Or they could do what they have done in the past with their game
systems. Gradually phase the game production out. The Lynx had two new
Atari-brand Lynx games this year, the 7800 was still getting games in
1991. I think the Jaguar will be serviced the sameway. Software is less
financially straining than hardware.

> involved in the FreeMiNT project?)

NAES sounds a lot like XaAES in that it runs on top of the MiNT kernal...
but as I've not heard anything from the guys who developed NAES, and I've
not released my initial XaAES beta yet, I don't know how the two compare.

I would have liked to demonstrate XaAES at the Atari world show last sunday
in London...but I couldn't find a single person who was interested. Very depressing.
Atari World magazine themselves (namely Andrew Wright) pretty much refused
to speak to me at all, and put down any suggestions I had as irrelevant
(andrew's comments about STonX were ridiculous - does he realise that a
2nd hand Sparc costs less than a 2nd hand TT?).

Anyway, on a more cheerful note, I've just started on the resource handling
routines, and have tweeked the performance some for the window system.
Although I've not done any explicit mono support, I tested XaAES in mono
the other day, and it works fine (with the only problem being that all the
window widgets were drawn as colour bitmaps, so when they vr_trnfm() to
mono they tend to look a bit naff. Maybe someone will do a proper mono
widget set for me?

I'm sorry I'm a little late with this - things have been quite hectic of late ;)

From: Hans-Martin Vogt-Ostmann <hampf@ubka.uni-karlsruhe.de>
Message-ID: <Pine.HPP.3.91.951213155606.16492A-100000@ubkahp1.ubka.uni-karlsruhe.de>
Source record: 154501

Hi,

after all I got STonX running... :-)

Since STonX 0.5.6 supports TOS 2.05 (which is what I have) I got STonX
running on my HP9000 712/60 and HPUX 10.01 with gcc 2.7.0.

But:
1) How come it only loads _one_ desk accessory even if more are
present on my -fs C:? Is this a problem of STonX or TOS?

2) STGUIDE runs at first, but then (at the 2nd or 3rd page) dumps with

SIGSEGV for stack growth failure
Possible causes: insufficient memory or swap space,
or stack size exceeded maxssiz.
Segmentation fault

The same message appeared with STonx 0.4 while booting TOS 2.05,
which now seems to be fixed, so I assume, this could have the same cause.

As these are the only bugs I discovered so far I, "Good work", I must say.

So long,
Hampf

q>
q>Hallvard

Hi Hallvard,
I use a 486DX66 16Mb RAM with ghostlink ;-)

Seriously, you're right, it must have been a hoax. Though the only product I've seen advertised was primarily an accelerator, with IDE attached. Completely blows any savings made on a cheap IDE drive.

> I find it very hard to navigate at Hensa...

If nothing works, then try this:

1. log in at Hensa using TELNET; use CD (Call Directory) MICROS/ATARI/TOS
to enter the file directory; use the TYPE command to read the MSG files,
that will tell you the contents of the archives. Found the one you need?
Then write down the filename (for instance: q136).
(or you may want to list and read info about new files in the
NEWS or NEWFILES directories).

2. Leave Telnet, and login again using FTP. Go to the directory where
your file is situated, e.g. q136), and download the file with the GET
command (GET xxxx.zip).

Not an elegant way, but it works. Who needs WWW for downloading anyway?

regards,
Marc.

Eric Noss (enoss@planetx.bloomu.edu) wrote:
: On Thu, 7 Dec 1995, GRAHAM CORNELIUS wrote:
:
: > Another thing to note is that the Jag is a lot
: > more popular in america than it is here in Britain. (deleted..)
:
: Atari should support the UK as it had a great marketing base in Europe
: for the ST. The Japanese systems are always first in Japan with months
: delay in America and Great Britian(some games are made right in those
: countries however). Other than trans-ocean shipping, there shouldn't be
: any problems with Britian getting the Jags soon.

Here in Finland, where Atari has always faced enormous problems (it's a joke to most people here - both ST-line, and (sadly) also Jaguar), I see a strange situation. The games magazines don't mention Jaguar any more than the computer magazines cared about ST, TT, or Falcon. Still, somehow, Jaguar managed to get inside one popular video gamesp program (you know, people call and play Alien vs Predator by telephone in public - actually, pretty neat...). So, Jag _has_ got some publicity, even tv ads, here. And as importantly, some major distributors have included it beside Sony, Nintendo, and Sega. Doesn't look bad.

But it just doesn't seem to sell at all. Just like people just didn't want Atari computers here, they seem to prefer anything over a 64-bit console made by Atari. That REPUTATION..! The image couldn't honestly be much worse, I think. People laugh at the name. Now, what we see here is some serious marketing - but a product nobody seems to want.
What should we think of this?

I only know that though I'd love to see Jag succeed, Atari just doesn't produce games I'd love to play. Where are the serious simulations showing the 64-bit power? Racers, flight sims, role-playing in natural graphics... No, just kicking and jumping games for kids. This may well have been the greatest mistake Atari did. They thought that people want such coin-op-like arcade games from their 64-bit boxes. Some people do. But most of them probably will buy a SNES, or Saturn... Just for habit. We might have seen some serious simulations, if someone somewhere had not decided that Jag will be the console for Kid-games. They lost too many potential buyers there. I know too many people who'd love to buy Jaguar - but never games like MK3, Ultra Vortex, or even Tempest. That's it. A BIG problem...

Maybe it's goodbye, Atari - after all. I still use my Falcon, and have no intentions of getting either a PC, or especially a Mac. Falcon is a good computer. Atari made very nice products. But after messing things

up like they did, maybe they dove too deep this time. One mistake too much somewhere. I hope I'm wrong, but it _would_ be nice to see them do something _right_ even once in their history =) !

: Just some of my observations...

And some of mine, too... 8-)

Tommi

: Nope, not selling mine, but I want an FX board RSN and APEX & eXpose too! &
: That's Write 4 or Papyrus 4 - whichever is the sooner, oh & Oasis 2, & i'll be
: well happy. Even though it will cost, & is certainly not powerer without the
: price, at least I won't require a 1 gig HD as I would on a PC for the equivalent
: software. Anyway I have quite enough of PC's at work...who wants to come home to
: the heat of a Pentium?!

I for one don't. And I wouldn't sell my FX-Falcon, no way =) !
Now, writing this on a Mac Quadra, I certainly know what I _do not_
want. It seems, one has to use PCs and Macs to realize the value of
Atari computers. And since I have to do this practically every day,
I just love my Falcon these days ;-) ...

It's a computer - not an elephant powered by Pentium and marketed by
Bill Gator & The MicroZoo (Beatles of the 90's).

Tommi

Try AUTOSORT, you can drag the files in any order you want and resort
them on the disk. No ST owner should be without it. :)

Yes I had a chance to play with it at the AW show at the weekend.

> Expose should work as the internal expansion isn't taken up ...
> (I don't think Expose has been tested fully but in theory it should work fine
> with the board)

Yep , although its gonna need an expansion piece to enable the two peices of hardware to fit together correctly , minor problem.

Of more concern to me was the lack of hardware switching and the fact that the FastRAM driver was slightly bugged I think with recognising the FastRam after a warm reset ... both these will cause some problems I think for Linux and some TOS things too .. MiNT and MAgic come to mind.

yes the install program can be very cryptic I have to say.
read and REREAD the doc files before commiting. And of course
you have no -one to blame if you did not have a back-up :-)

> On the second try, and after I fell asleep at about 3am, the
> installation completed itself. The next morning I tried to
> enter "su" to edit the keyboard file from German to U.S. and
> got the response that the file was not present. I was following

su or the keymap file ?? If I remember correctly the instructions
in the AW article were incorrect with one of the instructions regarding
the keyboard. All you have to do is comment out the loadkeys command
which will help until you find the UK keyboard map and then point to
that with the loadkeys command. until you find that map you will find
some problems still with the keyboard mappings and some extended char.
like the hash and UKP signs (due to US keyboard maps) and X has a lot
of "missing" keys.

If you are running a Falcon I can send you the keymap file for UK keyb.

> the article in one of the Atari UK mag's. I decided to pass on that
> and just boot Linux. All looked well until it tried to read the
> mouse and then I got an error that it couldn't find it. I'm
> using keyboard Gizzmo with a PC Keyboard on my Falcon. Mabey that's
> the problem.

Is this with X or the command shell ? The mouse driver needs to be
removed from rc.local if you want to start X. The Gizmo could be a
problem I dont know , is this a serial mouse or a standard atari
mouse ?

> Another oddity, the prompt, which I am told should be a pound
> sign, has the ~ before it. Is that correct?

yes that means you are in your home directory. change to another
directory and this will disappear.

Network ST International Association (NeST).

==========

Press Release Issue 012 (24/09/95)

What is NeST?

NeST (Network ST) is an international network based on FidoNet technology, dedicated to the Atari range of computers, in particular the Atari ST, TT and Falcon. The aim of the network is to provide messaging facilities to all Atari users the world over who are interested in the world of communications and in the ST. Eventually it is planned that NeST will extend to virtually every country in the world, however NeST now links the following countries:

United Kingdom

Canada

The United States

Germany

The Netherlands

Australasia

Italy

France

Spain

Sweden

Czech Republic

Poland

Norway

Denmark

Luxembourg

South East Asia

Belgium

This is by far the largest Atari dedicated network in the world, and it is growing rapidly, with an average of a new country coming online every couple of months.

NeST members work closely together to generate a good atmosphere; within NeST you will not find any political battles, something which can't be said for a lot of other alternets. NeST also has a habit of collecting programers from every walk of life, including some very well known names, who are either members of the network itself, or affiliated with it.

NeST has a wealth of message and file echos, ninety percent of which are echo'd round the world, and replies can be achieved within three to four days. The message echo's cover a terrific range, running from software support (LED, JEKYLL, JetMail, MakeDiff, Semper, etc), programing (GFA, C, assembler etc), and general interest echo's like the common room where chaos rules, and users let off steam, and the Q&A echo where weird and wonderful queries are posted. We also have direct contact with the Atari publishing world and have contact echo's for both ST Format and Atari World magazines, with many members of the editorial staff online.

Or if you are looking for something a little different why not take an interest in Space Empire Elite? The game runs throughout the network, using special programs coded by NeST members to coordinate and send inter-BBS attacks through the network.

NeST allows the use of almost any mailing software, be it F-Net/Crossnet, or fidonet technology, to be used to collect mail, giving a very flexible system of mailing. Point systems are given rights too, if they take a

'Pvt' address in the master NeSTList, they are allowed full participation in the network, including taking part in votes on major changes within the network,again this is rarely allowed in other networks.

One item that worries some users, and sysops is cost, that is network fees for linking into the network itself. With NeST no such fees exist, as each member works freely to gain the best connections, minimising mail costs as much as possible.

NeST may be accessed via the following methods:

- Dial up (log on) access via a NeST BBS and a comms terminal.
- Via .QWK packet reader at your local NeST BBS.
- Via fidonet point or node access software, again via your local NeST BBS.

It should be noted at this time that NeST can not currently be accessed via the Internet.

NeST also has available all the files taken from the FAN (Final Atari Network) file echoes. FAN is often the first place to find new files, many times directly from the authors themselves and has links to the respected MausNet network in Germany.

NeST users also have the ability to access InterNet email and newsgroups via the NeST Internet gateway located at 90:100/106.0@nest.ftn (@nest.demon.co.uk).

If you want to join a network that's friendly, fun, well informed, and concious of what's going on, well why not try NeST, I don't think you'll regret it!

For more information contact:

Daron Brewood - 90:90/0.0@nest.ftn

- dbrewood@nest.demon.co.uk
- dbrewood@cix.compulink.co.uk

I look forward to hearing from you...

Daron Brewood - NeST Coordinator

I don't think this is true. ESS Code doesn't make use of the Selector
Info line to tell you what it is looking for. It is very confusing
sometime if it is seeking the source, the destination file, or something
altogether different.

While we are on a related subject, I have been getting more and more
BINHEX 4.0 encoded crap all the time. I think that Eudora on the
Macintosh does this by default, so I get tons of this stuff. I haven't
been able to find a tool under TOS to unBINHEX these files. Anyone know
where I can find one, or where I can at least find documentation that
describes the BINHEX format?

I finally found a MS_DOS based BINHEX utility, but it is rather a cludge
and I would rather use my Atari for all this stuff.

Or it can be done using Spectre GCR if you want to connect the
drive to the ATARI DMA or scsi. You would have to import the data with a
small mfs partition. Actually for this you wouldn't even need GCR just
spectre 128. I've had no problems reading and writing to mac hds on the
atari.

> doing business, or the whole advertising thing is a hoax!
It's not a hoax, as these interfaces do exist, e.g. Hard&Soft sells this
IDE-Interface-stuff (for STF).
My does work in a 520STM. The IDE-Interface and a 2.5" IDE-Drive (the old
one from my F030 :-), it all fits into the 520ST's original case!!!

> Does anyone know anything more about IDE interfaces for the STE?
Maybe you can use the HBS640T36 for STE and put in the Multiboard, then
you have an STE with IDE-interface. (But's too expensive...)

3720. CAB offline

Newsgroup: comp.sys.atari.st
Date: 1995-12-13 00:00:00 UTC
From: Ian_Taylor@a2w.maus.sub.org
Message-ID: <199512132041.a61241@a2w.maus.de>
Source record: 154527

I'm trying to use CAB 1.0 as an offline browser under TOS 2.06.

I have lots of html files organised in lots of folders so I can find them, but of course the idea of hypertext is that it should be able to find the linked pages for you.

Anyway this new version has a feature that might help. According to the documentation CAB should make a graphical display of what is inside a folder. I can only make this work on the example page where the drives are listed, and then I see an icon for each folder, when I try to open one of these folders I get a "read error in file" message :(

Anyone got this working?

Ian_Taylor@a2w.maus.de

> think this was the file that it said was going to be overwritten the
> second time I tried to run it.
> Any ideas any one?
>

< Lots of lines clipped...>

Hmmm, let me see. I am sure I remember that esscode actually requires you to
select the destination path/file first and then the source file. I remember
tearing my hair out about the same thing a while ago, and I cannot remember
what fixed it for me. If this is what happens, then the 'overwrite' message
makes sense...

If you use selectric, you will see the comment at the top of the window which
will indicate whether the program is looking for the source or destination
path/file.

Hope it helps... sorry if I am wrong, it's been a while and my memory isn't
getting any better as the rest of me gets older... :-(

: : - What kind of hard drive is this?

: It's a Fujitsu 540MB SCSI Drive... :)

: : - Are you sure that the speed tester uses the hard disk driver to
: : read from disk? I might be wrong here, but AFAIK it uses its own
: : routines for this, so you cannot determine the driver speed from
: : these data.

: Hmm, well this is possible, as ICD would love you to believe it's driver
: software gives speeds this high.

1.4 MB/s is pretty close to the maximum on the DMA bus. You should
try to get your hands on "Howfast" which is a nice utility written
to find the GEMDOS transfer rates. It should be available on
atari.archive. If your transfer, measured by Howfast, is still
close to 1.4 MB/s, then there is probably no point in upgrading.

: Anyone answer my original question, i.e. whether ICD will give me new
: drivers, or whether there are compatible PD Drivers...???

I assume that ICD still exists and sells hard disk drivers and updates.
Just give them a call.

There is something *close* to a PD driver: CBHD.

>Medusa. Sounds powerful and to be respected.

Me too. Appealing names mostly have a ring of power to it - you
achieve that simpler with a slightly negative bias. A computer called
`Hercules' or `Zeus' even has a bit of an old-fashioned ring to it.
Cf video cards: `Stealth', `Viper' etc.

Would you rather have a 64 bit home entertainment system called
`Kitten'? :-)

P.S. I really think some chip names are badly chosen. The most
powerful microprocessor on earth is ATM some Alpha called 21164/blabla
(See? Forgot the name already). And though PPC sounds OK, the code
numbers 601 and 603 do _not_. They sound like Peugeut car names :-)

If I'd been there, I'd defenitely been interested. I'd probably even
asked you for a signed copy. :-)

>Atari World magazine themselves (namely Andrew Wright) pretty much refused
>to speak to me at all, and put down any suggestions I had as irrelevant

Huh? That's hard to believe - I just recieved my first issue and
generally think it's a pretty thorough mag. With names like Ofir Gal
and Danesh Bhabuta it surprises me that they treated you like this.

>2nd hand Sparc costs less than a 2nd hand TT?).

Is that true? But you don't easily find 2nd hand Sparcs...
(don't reply with: `neither 2nd hand TT's...', I know...
Do you know a source of those? (Sparcs, I mean)

>mono they tend to look a bit naff. Maybe someone will do a proper mono
>widget set for me?

Can't you use the standard ROM stuff? (Otherwise, what exactly needs
to be done, maybe I can be of any help).

>Craig
>(XaAES author)

Seeing is believing :-)

3734. Opinions on MagicMac?

Newsgroup: comp.sys.atari.st
Date: 1995-12-13 00:00:00 UTC
From: chambera@cs.pdx.edu
Message-ID: <4anof9$ijh@sirius.cs.pdx.edu>
Source record: 154541

I'm thinking about getting MagicMac to run on my girlfriend's Quadra 630. Anyone have any opinions? How compatible is it? Is it more reliable with the average Atari software than running System 7.5.1 with Mac software? (Tell me the truth, reliablility is a real concern of mine--the PowerMac's and Quadras at my school are almost as unreliable as Windows machines--crashes every half-hour.)

TIA,
Alex

3735. Re: Advice on TT/Falcon video?

Newsgroup: comp.sys.atari.st

From: chambera@cs.pdx.edu
Message-ID: <4anoqi$io4@sirius.cs.pdx.edu>
Source record: 154542

In case anyone else is interested, I got a lot of helpful e-mail in response to my questions. The consensus is as follows:

1. Linux/68K will work well with any kind of video as long as you have the right driver and can set it up properly, which is easier said than done.

2. For TOS and MagiC, however, some cards are better than others. Rainer Kloth of Germany wins the prize for his knowledgeable answer--he suggests (a) Blow-Up FX for the Falcon, or (b) Crazy Dots VME for the TT, although these are no longer being made... the Nova card is still being made and quite popular, but slower and not as compatible as the Crazy Dots.

Alex

David H Butler (dhbutler@stat.mps.ohio-state.edu) wrote:
: OK, I finally got a Falcon (C-Labs MK I with 14mb ram) , and I have a couple
: basic questions that I have been unable to easily find answers for. I would
: appreciate any help you can give me;

Congratulations for a good choice =) !

: 3) Is there any way to get Calamus 1.09 and the older Outline Art to run on the
: Falcon? I have SL, but I prefer to use 1.09 to do my B&W work since it is so
: much faster...

With the cheap, but very powerful BlowUP FX card, even SL works like a charm!
I think, you might be able to use 1.09, or especially 1.09N, by 1) using
some monochrome screen mode, and 2) by using the great BACKWARDS shareware
program from France (in English, don't worry ;-). It enables most older ST-
games and other programs to do their job on Falcon.

: 4) I need a 600dpi driver for Calamus/Calamus SL (for a HP 5mp). Do I have to
: go to ISD for this or are there some drivers I can download?

LaserJet 4 driver should do the trick I think... Do you have one?

: 5) Finally, I have a feeling that a number of problems may be due to NVDI 3.x
: which I purchased along with the Falcon. I'm interested in *compatibility* mo: than I am
in speed (I use Geneva instead of Magic for this very reason) - Wou: Warp 9 work better for
me? The version included with my T25 on my Mega ST
: system does not work on the Falcon, so I would have to pay for an upgrade,
: if it is more compatible than NVDI it might suit me to do so...

NVDI 3.01 has been almost perfect for me this far.. I use Geneva 004, Thing
desktop (great!), 150 vector fonts (no problems ;-), and loads of utilities.
If NVDI 3 doesn't work reliably, there has to be something somewhere
disturbing it. What is your AUTO-folder (and its physical order)?
Btw, NVDI 3.01 has a bug; it doesn't work on TC-mode. 3.02 and 4 do.

: 6) If any kind soul out there could point me in the direction of the 'standar: set of
patches I should have installed, it would be great.

My recommendation (note the order):
AUTO:

STOOP boot-selector from France, very nice!
PINHEAD 2.1 (faster launch of programs, not necessary)
NVDI 3 or 4
SELECTRIC file selector (Shareware, great)
SILKMOUSE 3.2 mouse accelerator
JAR10 (Geneva utility)

GENEVA rel. 004
BLOWBOOT (if you use Blow-UP screen enhancer)

ACC:

X-Control or Z-Control (an improved version for multitasking only)
1st Guide hypertext guide

OTHER GREAT UTILITIES:

ZEIG ES MIR! (a German, wonderful viewer-utility! Absolutely fantastic!!)
...But get the newest version only!...
GEMVIEW (picture viewer, should I say more..)
E-COPY: Excellent disk copier/formatter from Germany (in English)
KOBOLD 3 Even the demo version is worth gold! THE file copier!!
APEX VIEWERS: The best GIF/JPG/TGA/... viewers there are. I only wish
they would work in window (Geneva...), sigh...
THING 1.0 Desktop - THE desktop IMHO... A joy to use, and does miracles.

: Thanks for the help... The transition from my ST to the Falcon is proving to : harder
than I thought - an amazing amount of software has failed even though : Mega 4 was equipped
with TOS 1.4, an ISAC high-rez color board, a T25
: accelerator and Geneva/NeoDesk.

I know... Falcon isn't a ST, I learned it the hard way myself. Somehow, after
a while, you just notice that everything you need works. I haven't ever
stopped to think what this meant. Did I give up incompatible programs? Maybe
I did. More importantly, many programs work differently on Falcon than on
ST. Setting up is different. AUTO-folder is very different. Now, after
using Falcon for 2 years, I find myself having problems with older STs ;-)... Can't get
them to work sometimes. Well, it's a different world.

Greetings,
Tommi

3745. Jr.office- how to set it up (???)

Newsgroup: comp.sys.atari.st
Date: 1995-12-13 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <30cf20041098fe4@sn.no>
Source record: 154552

Several people have recently asked me about how to set up "Junior office", since I apparently got it to work somehow (although I haven't actually tried sending/receiving a fax yet).

Don't ask me how I managed to get it to work, because the whole program is a pain to set up if you ask me.
Someone asked me if it was "crippleware" somehow, but as far as I know it's the full version (makes you wonder).

Anyway I spent a few long nights trying to get it to work...
The program seems very "restricted" in respect to where you can install it. It's obviously made for the root of the C:\ partition of the harddisk or A:\ if you're using a diskette, but this obviously doesn't suit everybody. I for one wanted to install it on D:\ within a folder where I have all my Internet stuff and comms software.

So, what I did was decompress the .LZH file over to the folder where I wanted it, then the fun began.... :-(
First of all the program gave me two bombs when I tried to load it (?). I re-read the manual, and found out that I had to do some work with the "MTX" folder.
The manual says:

> In the MTX folder, you should rename whichever driver you will use to
> FAXDRV.MTX and delete the other. If you leave it there it will do no
> harm.

This is wrong! because if I left the faxdrivers there I somehow got 3 faxdrivers in the menu (when it worked that is), so I moved the two fax-drivers over to a new folder I created, within the "MTX" folder, so I wouldn't need to delete them or anything. I guess I could just rename the extension to .MTZ or something as well.
The point is that it seems to load whatever has an extension MTX.

But you do need one faxdriver though ;-)
Find out which standard your modem supports (I have a US Robotics "Sporster" 14400 baud modem, and I've been told it does class 1 and 2.0). 2.0 is NOT the same as 2, so I chose the class 1 driver.

Rename the copy of this one to "faxdrv.mtx", so withing the MTX folder you have the following files:

compose.mtx
config.mtx
view.mtx
faxdrv.mtx

Naturally, if you want to use the fax as an accessory you should
remove or rename the "faxdrv.mtx" file (personally I
don't understand why anything other than an accessory should be used,
that is if you don't have multitasking like in Magic, so that you
don't have to quickly start the program and set the driver to
"receive" when you get an incoming fax. It's naturally a lot better to
use the accessory which is ready for a fax at any time- as long as the
computer is switched on).

For some reason I couldn't get the faxdrv.mtx to work all the time. It
did seem to work if I installed the program on the root of the boot
drive like it was intended though..
But as I said, I wanted to use the accessory instead.

As for starting up from another directory, the manual says this:

> Although the software is pre-configured to run from C:\OFFICE it will run
> from any drive. Move the entire OFFICE folder to the ROOT directory of your
> chosen drive and run OFFICE.PRG whilst holding down the CONTROL KEY

So that's what I did.
After the program had been loaded I was asked to enter the path of
"JrOffice". Go to the path where the program is withing the file
selector and click "OK".
Then you're asked to find "office.prg". Do that and click "OK".

You're then ready to configure the program.
Go to the configuration menu and select the paths for the various
folders/external programs to be used (text editor, drawing program-
which handles .IMG files as far as I can tell).

Then go to "station info". This is where people see who it's from
(name, fax no. and country code).

I found a bug there: as we don't have area codes here in
Norway any longer I left that field blank, but when I looked at a fax
I had made it "161" showed up there. I guess somehow this is the
default of the programmer's tel/fax no.

Now, go to the "misc" menu within configuration.
You will see something about "Search for fax every __ minutes".
Set this to "0" if you don't want the computer to search your folders
every now and then (I can easily see a problem here with disk-only
users after they've changed disks and run the fax accessory).

Finally save the setup!!

As for the ACCessory- set it to "sending disabled", or else it'll try
to automatically send the faxes you didn't manage to send off earlier,
and will try this again and again (this is configurable in the "modem"
menu, under "configuration").

I haven't actually tried sending or recieving a fax, but I would think
this would be the way to set up the "receive" feature in the
ACCessory:

If you're at home and have your computer switched on, you should set the accessory to "auto receive OFF". This way, when you pick up the phone, hear the fax tones, you can quickly go to the accessory and press the "Receive..." button.

However, if you're away, but want people to reach you by fax you should do it this way (I think):
Leave your computer on (naturally). Set the ACCessory to "auto receive ON". After you've pressed "OK", and re-enter the accessory you can see that the "Receive..." button is greyed out- this is why I said that you should set auto receive to "OFF" when you were able to pick up the phone.

Now you wouldn't want people to get a fax tone to answer right away if you're not there when they want to talk to you.
So you have to set the amount of rings before the modem "picks up the phone". As far as I know, this is done by sending commands to the modem, but I think this can be programmed from the fax program itself, so that you don't have to store it in the modem (in case you only want the modem to answer when you're using it as a fax).

I think you can set this with the "init string" in the "modem" configuration.
As I see from the manual to my modem you use the AT-command;

ATS0=x (where x is how many rings before the modem answers)

i.e. ATS0=5 (for 5 rings before it answers)
(If you set ATS0=0 auto answer is switched off)

Your modem might be different, so check with the manual that came with it, which command should be used.

I guess that's all. It somehow worked for me (don't ask me how), and I hope this will help.

In case you haven't gotten hold of Jroffice, it can be found at:

micros.hensa.ac.uk

micros/atari/tos/p/p173/jroff34e.zip [269K]

Another fax program I'd recommend (which seems to work a whole lot better) is Coma. There's a shareware-demo (restricted, but you can still do a lot with it) of the latest version- 3.10. You can use it unrestricted by registering...

It's also available at Hensa by FTP:

micros/atari/tos/q/q141/coma_310.zip [398Kb]

Good luck with your faxing!

Hallvard

There is a GEM shell for GNU C (available on a.a.u.u or ftp.cnam.fr) and
then you're able to run any of your favourite GEM text editors.

> 2. after the installation of gnu c++ i wrote a test programm hello.cc with

For GNU C I always use virtual RAM (eg. V-RAM - shareware or Outside -
commercial) on my 4Meg falcon.

> if it's not possible to use gnu c++, is there another c++ available for
> the falcon?

No, it's only one...

Tom:
My 1040STe came with 4x8 256K simms(1 MB), which I soon replaced with 4x8 1024K simms(4MB). My TOS was 1.62 however.
take the STe apart, and under the shielding between the keyboard and the back of the Atari, is where you snap in your simms.
someone posted the following on the net:
FOR 2MB
back of machine
1 MB simm
empty space
1MB simm
empty space
keyboard(front of machine)]
hope this helps

David H Butler (dhbutler@stat.mps.ohio-state.edu) wrote:

: on the RGB monitor. (This boggles my mind - I'm fairly sure that most Falcon
: users are using VGA, aren't we?)
I think so. Hope somebody answers in the positive about an RGB emulator.
Only way I know is with multisync.

: 3) Is there any way to get Calamus 1.09 and the older Outline Art to run on
:the Falcon?
hmmm - didn't know it wouldn't

: 4) I need a 600dpi driver for Calamus/Calamus SL (for a HP 5mp). Do I have
: to go to ISD for this or are there some drivers I can download?

I'm using one on the HP4mp with Outburst. If you can manage it, you might
consider getting on Genie. DMC has great support there - user to user
tips too.

: 5) Finally, I have a feeling that a number of problems may be due to NVDI
: 3.x which I purchased along with the Falcon.

I haven't had any problems with NVDI 3 on the Falcon, although I usually
use Warp 9. Not sure I would bother to upgrade it since it's not being
developed anymore. NVDI 4 has just hit the stands also. NVDI setup can be
tricky - if you'd elaborate on your problem maybe I can help.

: 6) If any kind soul out there could point me in the direction of the
: 'standard' set of patches I should have installed, it would be great.
there are a couple - I'll check tonight

: 7) Finally, I have a RENO external SCSI II CDROM drive which I use on my
: PowerBook. I have the ICD Pro drivers which I am currently using. There
: should be no problem hooking up my CDROM, correct?

you would need ExtenDos or one of the PD/Shareware drivers for the CD.
don't know about the PD ones, just that they exist. ExtendDos is very good
and well-supported though.

I had a similar experience when transitioning, but am now delighted and
my Mega is growing cobwebs. Actually I've found very little that doesn't
run on the Falcon once you get things sorted out - even games that
wouldn't run on the STE run ok with backward though I only tested it a
little. Of course, the 14mg helps 8-) With 4 meg on the Mega, Calamus used
to be slow and crash a lot when printing big, graphic-intense stuff. Now I can
really load it up and it's still nearly as fast as straight text.

Again, I would strongly recommend Genie if you can swing it. It's
probably the most active Atari site left, with great support for Calamus

and ExtenDos and the Falcon.

fdp

oh - I don't think you mentioned what OS you are on - there were a few
odd things that needed to be fixed - SCSI timing was one - it would help
if you know it's pedigree.

The root directory of a GEMDOS/MSDOS filesystem has only a fixed
amount of space available for file entries. Copy the files into a
subdirectory instead.

I just tried sending a mime attached file via e-mail to my other
account and using essdc64 on it! I ran into the same problem that you
described! All I got was a tempdesc.txt file in my esscd64 folder! I
think this was the file that it said was going to be overwritten the
second time I tried to run it.
Any ideas any one?

It could be that you don't have write permission for that directory
(permision to write = permission to delete).

Try `chmod 777 dirname', which sets all permissions on; you might also
have to do this to the directory which _contains_ the directories you
want to delete.

MG> clone, not a 3.xx clone.

And when can we expect this to be delivered? If they continue in this way we maybe will get it before year 2000 when the PPC runns in over 300MHz. WOW! ;-)

Don't get me wrong here, I do also think that the products Wizztronic talks about sounds _very_ interesting, the problem is that they so far have only released pressreleases. :-(

Cheers,
Magnus Kollberg

In the shareware/donationware world he should probably try Octopus, which seems to have a following. Commercialware @ $90 Ratsoft has a lot of fans, but for my money ForeSight by Brian Hauer/TSO Software is as good as either of them, its Donationware...

try calling TSO for an betapplication : 1 310 543 5484
I believe Brian himself stops in here now and again too.

Its a really nice layout, features fullscreen editor, very intelligent software, FAST even on an 8mhz ST! and uses about 2meg w/networking enabled.

Certianly one to watch out for, waaaaay nicer than Express, btw. *IMHO*.

- I've ran Triplink, Total Logic and now Foresight, and Foresight beats em all, (I sidestepped Forem/QBBS/Express/ST-Keep as too "old" looking).

Happy hunting! Andy

(This boggles my mind - I'm fairly sure that most Falcon
>users are using VGA, aren't we?)

The Falcon video hardware can put out twice the vertical resolution
using an RGB monitor - due to the interlacing. I think that this is
why most demos are coded for RGB. Plus the fact that most RGB
monitors like Atari SC's or Phillips Cm8833's have speakers built in.
Why not just use your TV if it's only to see a few demos?

>3) Is there any way to get Calamus 1.09 and the older Outline Art to run on the

Just thought I'd jump in here :-)

PAC is a monochrome bitmap format originally used (I think -
someone's bound to correct me if I'm wrong <g>) by a German(?)
package called STAD, and still used by PAD. Gemview will happily load
PACs and save them out as .BMPs.

: : 3.x which I purchased along with the Falcon.

just checked on that...works fine. Calamus doesn't work in 256 color
though - I have a habit of forgetting that and having a fit when my
document doesn't display right 8)

: : 6) If any kind soul out there could point me in the direction of the
: : 'standard' set of patches I should have installed, it would be great.
: there are a couple - I'll check tonight

Falcon Patch 2 is the only one I know specifically - it's included with
the Stik/CAB package & lots of other stuff. HSMODEM is needed to make the
serial port go fast or something but that's true of the ST's also. If
you're doing much jpeg stuff then one of the Jpeg DSP loading-things (I'm
very technical) is worth having too. There's at least one Falcon-specific
PD CD available.

If you have web available, check the Toad Falcon section - they have a
good list of CD'S - I have a link to them on my page (see sig)

Definitely should not be a problem. I often run it with a lot less
than that (other apps running also under MagiC).

> On the same topic, what has been changed in Junior Office 3.04
>relative to 2.01???

+The package now contains Class 1 driver as standard
+The buttons in Compose have been made slightly more intuitive
-The telephone icon is now a question mark. Why????
+Rendering of Faxes in much faster with text
+Far fewer bugs and crashes (OK so its not perfect but almost :-)
+Fax drivers will run as MTX, Program or ACC
+Faxes can be sent and received in the background (under MagiC or MTOS)

3773. Re: WWW105 - CAB wish list

Newsgroup: comp.sys.atari.st
Date: 1995-12-14 00:00:00 UTC
From: dancer@brisnet.org.au
Message-ID: <4aoto3$4ma@gateway1.brisnet.org.au>
Source record: 154424

azog (azog@gti.gti.net) wrote:
: I've been playing more and more with CAB, and outside of my previous posts
: on, I have to say again I am really happy with it.

: What is an adaquate sound player? I say "adaquate", because I would want
: a nice small and easy to use one, that I can run from inside CAB when
: I select a sound source. I have several, but they're too "bulky" for
: this (like some that are also recorders), and don't know if they support
: CAB's method of calling helper apps.

LPS seems good. No, I don't know if it will work with CAB's method. If it passes command-line args, fine, otherwise no.

: A question of CAB's cache. Is this a "checked" cache? Like in Netscape,
: if the document on the target host hasn't changed, the document is
: loaded from local cache. Does CAB do this or similar? Because if there
: is no checking, then the local cache is always loaded, you don't know if
: this is the correct page or not.

Not as of 1.08. I don't know about 1.15. 1.08 and below (a) always used the cache data, and if it was there never checked the real thing, and (b) would not send a 'reload' to an external proxy (damnit).

: I wonder if the author(s) read this newsgroup? Well, in any event, I do
: have a couple of wish-lists; one is a "reasonable list", and the other is
: "would be nice, but..." list...

Good question.

: I do a lot of comparisions to Netscape, since it's the best browser in
: the world. It's not a fair comparision, but not far off the mark.

Actually, I hate netscape. But that's just me. 'This page has been Netscape Enhanced' seems to mean these days 'if you don't have a PC running Windoze or a Mac then this page is unreadable'.

: The reasonable list:

: The status bar states "Receive x/0 bytes". I assume that last 0 is supposed
: to be the total number of bytes to be received. Netscape tells you the
: number of bytes/and or the percent of the document received, as well as a
: "document done" when finished.

This information is not always available to the client. Presumably CAB is never checking.

: Also, a "forward" button, or menu item would be nice. Again, Netscape has
: both "forward" and back. Sometimes I press back, but didn't really mean

: to. I could easily select the link again, but it does make it easier...

I've never seen a forward button on Netscape. Hmm.

: I don't know if they're part of HTML 2.0 or HTML 3.0, but Netscape (and
: others) have a "visited link" option, that lets me set different colours
: for links that I've already been to. (there are also other link tags,
: like alink, vlink, and at least one other).

Neither. S'far as I know it's not standard.

: Finally, this is two in one: a timeout feature. There's been times that
: I selected a link, and the host is unreachable, or something happens that
: I can't connect to it. A 60 second timeout would be nice. Related to this
: is a "stop" button, or similar. Sometimes people have links to hosts that
: are down or something, and a stop button is handy. When I press the stop
: button in Netscape, it seems to continue loading local page.

A stop button would be good, yes. Netscape never times out, incidentally.
Other browsers do, but this ability was removed from netscape so that it
'would wait the required minutes or hours to go through a queue to some of
the busier servers.

: The "it would be nice" :-) list:

: Java! (not extremely unreasonable: Sun has opened Java up for development,
: and all it would take is a saavy programmer to give it a whack. And
: I won't accept "An ST can't do Java" answer, because "they" said that
: the ST would never support a web browser. Actually, personally, I
: use a Falcon and TT)

I presume Java is nice. Everybody jumps up and down saying 'I wish I had
more RAM in my PC so I could do an install of Java'. Does it really take up
so much memory? Is it really worth it? What is it?

: Support for the mailto tag.

Ah. Easiest request so far. mailto is a doddle. It's a simple smtp transaction
and getting some text from the user.

Sorry - this is a rather silly limit of the Unix filesystem interface in STonX
0.5.6, which will be fixed once I get the wildcard pattern matching routine
implemented correctly.

>2) STGUIDE runs at first, but then (at the 2nd or 3rd page) dumps with

>The same message appeared with STonx 0.4 while booting TOS 2.05,
>which now seems to be fixed, so I assume, this could have the same cause.

The cause for this is probably a sequence of bus errors or similar, which
unfortunately will cause STonX to crash sometimes. Which version of STGUIDE
did you try?

> Am I right supposing that you mean MEGA STE whenever you say STE/STe ?
No.
> Or do the 1040 STE keyboard-computers have slots to have SIMMs too ?
Yes they do
> Did they really come originally with two 30-pin 512Kb-SIMMs ??
Yes and no
> Or with banks to plug without extras only 4x8 256KBit-chips as in the ST ?
520STe came with two 256k SIMMS, 1040s with 4x256k SIMMs. The 256s
could be replaced by 2 or 4 1meg SIMMS, but without a kludge, it
wasn't possible to mix 1/4meg and 1meg ones.
>
> I'd like to know before I take ma STE (TOS 1.04/1.1.1990) apart ... :/)
TOS 1.04? do you mean TOS 1.4? IIRC that was the earliest fitted to
an STe.

Message-ID: <gigxr01-1412950845040001@47.85.0.99>
Source record: 154565
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st

I have several folders on a 120 Mbyte minix partition that I cannot delete.
I have tried both the desktop delete & RMDIR (from a shell) with no change.

The error message I get is 'access denied' (-36).

These folders are not corrupt, as I can copy in & out files.

I remember the thread about undeletable files a few weeks ago & some of
the solutions involved editing disk sectors.

I cannot edit the hard disk, as I do not know enough about the Minix
format & besides I don't think any of my disk tools can handle it.

Am I missing something really obvious here, like permissions or user privileges?

I have a question about the FX card

I already have 14 MB of 72-pin RAM, so I can't use the RAM expansion.
Can I still use the accellerators? How much speed will I lose? I
thought 72-pin was the "better" way to buy RAM anyway?

Hi Eddy,

I hope you get this message and I'm sorry it's taken so long, but there have been major problems with my universities computer systems lately, I've also had quite a lot of work on, and to cap it all I've lost your email address!

Anyway, thanks for sending the STFM circuit diagrams over, they are proving useful and if you mail me with your address, I'll keep you up to date on anything that we manage to get working.

Thanks again and sorry about having to put this up on the newsgroup,

Mike.

Yesterday I kludged around this problem:
I have ommitted Drive C: and put everything on Drive -fs D:, except the
AUTO-Folder and the Accessories, which I put on -disk A:
Everything works fine now......
except bkite and the ordinary FS-Box. Bkite bombs out with bus error when
I try to switch to drive D and in the ordinary FS-Box I cannot click on
drive D, but have to type "D" in the Text-Line to switch to drive D:

3794. Help starting 1040STF please?

Newsgroup: comp.sys.atari.st
Date: 1995-12-14 00:00:00 UTC
From: wcsmaxw@superior.carleton.ca
Message-ID: <DJLFLn.9rL@cunews.carleton.ca>
Source record: 154580

A friend just acquired an old Atari 1040STF (from previous discussions on this newsgroup, I have already learnt that the "F" means it has a floppy drive). As well as the 3 1/2" external drive and a number of diskettes, he also has a separate SH204 hard drive. The problem is that he can't get anything to happen when he turns on the machine. He was told that one of the diskettes has some kind of start-up program on it, but he has tried putting in each of the diskettes before he turn on the machine and none cause it to do anything.

He also cannot find an Atari dealer of any kind in this town (Ottawa, Ontario, Canada) or a manual or any other form of assistance. If anyone can provide any pointers - either in terms of what to do, or how to find help or any other advice - we would really appreciate it. Thanks!

I don't know about the Linux part slowing down by 80% that sounds far to drastic
to me but you would be better off checking out the atari channel (#atari) on IRC
there is always loads of Linux users on there and they'll help.
I'm fairly confident that the Serial Mouse program is on tha Atari
Archive, atari.archive.umich.edu, but whether it would work under Linux I don't
know but then I know nothing about Linux...

I think hat the most possible cause of this is either a corrupt file or the fact
that Esscode looks good but is one of the most unstable programs I have on my
machine. I can't even decode a standard UUencoded file on my machine properly
without hanging and stopping my menu bar being inaccesible, I don't think
another version is planned but I would really like to get a bug fixed version
but due to lack of registrations (because it is so buggy) I don't think another
version will ever be seen.

Hi, Mark

I also have to start by sending a 'CR' .
This is how my script looks like:

```
--------------------------------------------------------------------------
#
# Dial script file for STiK.ACC
#
#
# There are two parts to the connection process.
#
# The first part is initialising the modem, dialing a remote system
# and establishing a connection to a remote modem.
#
# The second part is to log into the remote computer. This will
# involve entering a username and password, selecting SLIP mode,
# and reading the Internet Address that your system will have for
# the duration of the session.
#
#
# Dial Script Part 1 - Establishing the connection.
#
# The first thing to do is to specify the speed of the modem with
# the BAUD_RATE variable.
#
BAUD_RATE = 57600
#
# Next you should define how your modem responds to the DTR
# signal. STiK will use the DTR signal to hangup the modem
# if HANGUP = DTR is set. Otherwise set HANGUP to the
# appropriate hangup string for your modem. (eg: HANGUP = ATH)
#
```

```
HANGUP = DTR
#
#
# PREFIX sets the dial prefix (ie: ATD, ATDT, ATDP)
#
PREFIX = ATD
#
#
# INIT set the string you can use to initialise the modem.
#
INIT = ATZ
#
#
# Dialing paramaters.
#
# The dialing parameters are CONNECT_WAIT and REDIAL_DELAY. These
# are times in seconds. CONNECT_WAIT is the amount of time to wait
# for a connection after dialing a number. REDIAL_DELAY is the amount
# of time to wait in between dial attempts.
#
CONNECT_WAIT = 35
REDIAL_DELAY = 20
#
#
# Phone Number(s). PHONE_NUMBER = number. Some providers
# have more than one number you can dial. You can specify
# up to five phone numbers here.
#
PHONE_NUMBER = 041143939
#PHONE_NUMBER = 2926200
#
#
# Determining connection success/failure.
#
# Connection success can be determined either by detecting the
# modems Carrier Detect signal (SUCCESS = CDWAIT), or waiting
# for a CONNECT response (SUCCESS = CONNECT) from the modem.
# Failure can be determined by a timeout or a modem response
# such as NO CARRIER, BUSY, NO DIALTONE etc.
# Up to five FAILURE test words can be set.
#
SUCCESS = CDWAIT
FAILURE = BUSY
FAILURE = NO CARRIER
FAILURE = NO DIALTONE
#
#
#
# Dial Script Part 2 - Log in to the Service Provider.
#
```

```
# The STiK dialer uses the standard `conversational' method for
# login to the provider. This involves searching for certain
# words and sending an appropriate response. The special
# response $GET_IP is used to read the IP address that your
# provider has assigned you for this session. If your provider
# has allocated you a permanent IP Address, then you should set
# it in the default.cfg file and NOT use $GET_IP.
#
# Each step of the `conversation' is specified as a FIND line
# and a RESP line. There can be up to 10 steps. Each FIND
# *must* have a matching RESP and WAIT, even if they have no
# value. (values are put into arrays in the order they appear)
#
# WAIT is the time in milliseconds to pause before each FIND/RESP
# For accuracy, the time should be a multiple of 5.
# (ie: a WAIT = 4 would result in a pause of 0. WAIT = 12 would be 10)
#
# By default each RESP line is sent with a carriage return
# character at the end. If you need to use a line feed character
# instead then put a | at the end of the line. This only works
# if the | is the last character of the line. A / character at
# the end of a line means carriage return, but this is the default,
# so you don't need it.
#
# If you want to send just a Carriage Return, then use RESP /
# If you want to send just a Linefeed, then use RESP |
#
# Note that if neither FIND or RESP have a value, they are ignored,
# but in this case the WAIT (if any) will still pause.
# If FIND has no value but RESP does, the value of RESP will be
# sent immediately or after the WAIT time.
# If FIND has a value but RESP does not, then after the FIND
# the dialer will move straight on to the next WAIT/FIND/RESP
#
WAIT 30
FIND
RESP /
#
WAIT 10
FIND = username>
RESP = USERNAME
#
WAIT 10
FIND = SLIP Address:
RESP = $GET_IP
#
--------------------------------------------------------------------------
Hope this helps!
```

I think you missed my point. The login script is reacting to text
sent...you know, "FIND:" and "RESP:." How do I set it up to find
nothing, but still respond with a CR?

And thanks for the advice on "RTFM!" I never thought of that!

>I select a sound source. I have several, but they're too "bulky" for
>this (like some that are also recorders), and don't know if they support
>CAB's method of calling helper apps.

If the author of this post is reading this, can you mail me, or tell
me which FTP site to get your sound player ??? I have a Mega STE, and
want a similar player. Anyone else who's reading, if you could give
me some assistance, please feel free :)

My wish list :

Mailto: in its simplest form will do.
The ability to use FTP links would be quite useful
A much more reliable system. If this could be dramatically improved,
then there would be much less winging all round !
Some way of knowing which pages are in the cache. Before they were
saved into folders, so you know which ones which and can load them off
line. The new system, is quite nice, but needs to list somehow whats
there, so it can be accessed in the same way as before !

Thanks !

I hope it's a legally obtained copy. Otherwise you've just opened yourself
up to possible criminal and civil penalties for theft of software.

> I never use it though - with NVDI, AES 4.1 and
>BlowUP I always run out of memory. This is a shame, as I _still_
>can't get a pure MiNT system working together with the original GEM,
>which is really all I want (just as on my old ST).

If you use the standard MiNT 1.12, the original GEM boots fine (I
don't know about FreeMiNT 1.12, I haven't tried it). In fact, original
GEM is the default if no INIT= or GEM= line is given in MINT.CNF.
It's possible that some accessory or auto folder program is causing a
conflict; try booting just MiNT in the auto folder. (If you have a 68030
based Atari, you may also need to try disabling memory protection
by renaming MINT.PRG to MINTNP.PRG).

>I'd hate to see al this knowledge collect dust on some Atari shelf -
>people like you and projects like these is what keeps me clinging to
>my Atari.

There are still some interesting projects going on (Craig's XaAES and
Martin's AES replacement come to mind). I don't have much time myself
to work on such projects (I'm working full time for a digital video
and multimedia company called VM Labs). But I'm certainly available
to give advice and "moral support". And I think we all should contribute
financially to shareware and commercial authors who support the ST -- there
are still some great products available for it.

I was curious if there was an alternative to CAB to use with STiK.
My problem is that CAB will seemingly stop doing anything usually
within five minutes of use. It will begin reading a page, for example,
and then do nothing. Does anyone else have this problem? If so,
was it fixed with the newest version (I have WWW108.ZIP)?
Of course, the problem could be STiK or they way I have things
configured. Any ideas would be greatly appreciated.

The ICD docs themselves will tell you that the speed it measures bypasses the
driver in some way. It's the drive speed and tells you nothing about the
speed of the driver AFAICT.

j> Anyone answer my original question, i.e. whether ICD will give me new
j> drivers, or whether there are compatible PD Drivers...???

I guess you just need to make sure that you've got the most up-to-date
version (6.5.5).

Alternatively, a friend of mine with the same drive has just switched to
HDDriver v4.52 and is well impressed with the speed increase.

I'll be installing my copy this evening <g>

What gives! I have no trouble getting to Tim Newsome's Home Page
http://www.cybercomm.net/~drz/ or to the yac home page! Both use the
tilde~ in them in fact I see no correlation to the use of the ~ and not
being able to access a page! I have a 4meg 1040STe w/ICD AdSpeed 16mHz
TOS 2.06 105M Syquest Hard Drive normally running in monochrome! Is there
any correlation between the version of TOS and the inability to use the
tilde symbol? I mean is it only the users from the UK or all European
Users? If so have you upgraded to www115 yet, because the 115 version no
longer tries to make a folder for each section of the domain name ie
~drz! I think that this might have been the problem, as the ST doesn't
like the ~ as part of a file name! Don't know why I got away with it
other than the fact that the ones I had success with had the tilde in the
last part of the name! I didn't try http://dcn.davis.ca.us/~dmlarson/yac/
till after I got www115 installed! 115 stores all the cache files in one
folder with arbitrary names like 00000035.htm and 00000046.gif, makes it
hell to find files associated with any particular site, but seems to be a
lot more stable, as you don't have the problem with truncated long names
coming out the same! Should also solve the problem of illegal directroy
names.

Not me!
Even though I have now also a real powerhouse next to the Falcon, it still cannot compete with CAF -- maybe in future it will, but Falcon will have it's place on my desk no matter what. I see things from the musician point of view: the computing requirements for musical work are fulfilled in Falcon as it is now, and so I consider it as a digital "sound module". Vintage instruments are always the most interesting...

Then again afaik the clock speed of the A1200 bus is something like 7 Mhz,
correct me if I'm wrong. Anyways, the Falcon beats the hell out of a A1200
with good DSP code.
Oh, and the DMA structure in Falcons and STs is supposedly better than
that of the Amiga.

MG> clone, not a 3.xx clone.

Sounds very interesting indeed :)
We can hope that they re-write the TOS too, to allow larger hard disks and more partitions - among many other things.
Since I have my Falcon in a tower, I might go for the Hawk anyway - but if their new machine works perfectly with Cubase Audio too it would really be worth more than a thought - they've probably juiced up the bus speed and made it 32 (or 64?)-bit all the way and removed the ridiculous 16MB limit for the RAM. Have they changed their minds about including video RAM on the Hawk or is it still going to be a future add-on?

>> In the mean time I'll go for a CD-ROM writer

MG>
MG> I know that CDRecorder does not advertise for the HP W/R CD-Rom,
MG> (as of yet), but HP has a 4x/2x? recorder for $999.00. What is the
MG> price for the Philips? (I think I mailed you a while ago on this,
MG> and now have seen the ad in the PC Trader for the drive).

I'm sorry if I've forgotten to give you an answer about this before, but I haven't been certain about the price since the distributor told me there was a delivery time of two months(!) and when I ordered it, they said the new (lower) price and that it would come the next day!
Here in Sweden they cost about USD1700 (including 25% sales tax), so there is some difference in price, but maybe SoundPool will include support for more CD-writers in the future. Yamaha has a cheap one too, I've heard.
I've had the CDD2000 delivered, but I'm still waiting for the software from SoundPool - I hope it'll arrive the next couple of days. My CD-ROM driver can't recognise it at all, so I can't use it yet - not even as a regular CD-ROM

player (but I do have my Toshiba 3.5*...).

3818. Don't Buy an FPU !

Newsgroup: comp.sys.atari.st
Date: 1995-12-15 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <819015024_OASIS_@phil4.demon.co.uk>
Source record: 154354

This little post details some of the problems I had after buying a 68882 for my Mega-STE.

1) After fitting all software that should use a FPU bombed out with 11 bombs. A small proggy called LFED (LineF Emulator) is required.

2) Programs, eg. Zorg, and Crystal Atari Browser (CAB) lock, they begin loading, display menus, the mouse still moves, but the menus can't be used and the programs just lock.

3) Other programs, such as POV 2.xx, and most others (Metamorphosis demo, Fractal Playtime) that I have tried bomb out with 2/3 bombs, part way through operation, the reason ?? They try to run using 68030 commands etc.

Tha problem seems to be that the 68000 in most STs, Megas etc. was never designed to use an FPU and consequently all software that uses it was written by authors who presumed, the FPU would be used on a TT or Falcon, and so almost no software is around that can use it on a plain vanilla ST or Mega.

The above is all my personal experience. If someone can put me right then I will consider plugging the fpu back into my computer, otherwise its just going to sit and gather dust until I get round to figuring out how to program it, and doing some programming myself !?!

RSB> at 9600 i get an this
RSB> CONNECT 2400/ARQ
RSB> so help!!!!!
RSB> this 2400 shit is killing me!!!

The old HST modems were a bit out of the standards, so connection at full speed
can only be made with a HST at the other end - otherwise you will only get 2400
and sadly, there is probably no way around it. I've heard about someone that
managed to upgrade his HST to a Dual Standard (a lot of soldering) and then he
could connect with most other modems, but this can't be done on all HST's. :(
The new ones however, do follow the regular standards (like V.everything and
Sportster) and work fine with all other modems (to my knowledge).

> Am I right supposing that you mean MEGA STE whenever you say STE/STe
> ? Or do the 1040 STE keyboard-computers have slots to have SIMMs too

1040STEs have slots for SIMMs.

> ? Did they really come originally with two 30-pin 512Kb-SIMMs ?? Or

Nope. 512Kb SIMMs are rare - and not found in Atari computers.

> with banks to plug without extras only 4x8 256KBit-chips as in the
> ST ?

Yes - 4 x 256Kb SIMMS. Not like the ST though - as the it didn't use SIMMs
at all.

> I'd like to know before I take ma STE (TOS 1.04/1.1.1990) apart ...

If its 1Mb - then your best bet is to remove the 4 256Kb SIMMs and replace
them with 4 1Mb SIMMs.

:-)

Roland.

Anybody know how to set it up for a 1MB Matrix COCO card on a TT?

I'm running Linux/68k 9.13 - and undertand about the 'external' kernel
option. The main peice of information I'm missing is the base address of
the card. Can anybody help? I don't have a manual so I can't look there
(expect it wouldn't help anyway ;-)

Thanks

:-)

Roland.

> the same time. Can this be done and how?

Not unless you can network your STs in some way. Even then one ST would have to access the hard drive via the other machine. Networking on STs is a very painful experience. I've been trying various systems out over the last 5 years or so - and the only one I'm happy with it MiNT-Net. However I'd be surprised if your music software got on with MiNT.

Although in theory it is possible to have 2 computers access 1 SCSI device - this relies on each computer having its own SCSI host adaptor - and each host adaptor to be clever enough to cope with other host adaptors on the SCSI bus.

The ICD Link isn't up to this. Buying another one won't help either - as 2 won't work on the same SCSI bus.

Basically - no can do.

:-(

Roland.

Sander Stoks (sanders@sci.kun.nl) wrote:
> P.S. I really think some chip names are badly chosen. The most
> powerful microprocessor on earth is ATM some Alpha called 21164/blabla

(I believe the latest and fastest is the 21164/300 [300Mhz 21164 CPU]. Or at least it was about 6 months ago when I last looked. Current talk is that they will ramp that up to 600Mhz in the next 18-24 months.)

True. But for those of us in the software industry [and possibly the hardware industry as well], the name "Alpha" has a ring of "first attempt, badly buggy, poor performance, bloated beyond belief". All negative.

(BTW, those of you who frequent the PC newsgroups, the name "Microsoft" may have popped into your mind when reading that expansion of the meaning of "Alpha". It's a common enough comment to read there)

And in todays market, names mean more than product specs. Especially when Joe Consumer goes to buy a product. Frequently, the customer will ask for a _type_ of item they want, and then make the decision of the basis of the look of the box, the name of the product, or the salesmans spiel.

The market itself is populated with large numbers of people wanting to buy products without knowing what the product does, and with sales people who (often) know even less than the buyers.

Thankfully, the Atari users that I have met do not fit this scenario.

The (dull, boring, unimaginitive) named products often do more than the (bright, alive, inspiring) named ones. But sell less. Would you have bought an Atari Sparrow? I dont think so - it is a rather anaemic, limp and rather weak sounding name. That is why they changed it to Falcon.

|> I take it that I need to introduce a specific driver aswell ???

You can connect virtually any serial mouse to the serial port and it
will work with Linux and X. No special driver is needed, but you'll
have to tell X which mouse type you have.

>
> Then again afaik the clock speed of the A1200 bus is something like 7 Mhz,
> correct me if I'm wrong. Anyways, the Falcon beats the hell out of a A1200
> with good DSP code.

Ohhhh yeah, the DSP does really kick serious *ss, especially at 50 Mhz :-)

The BUS-bandwith of the Falcon is much better than the A1200, for example the A1200 can just barely show a 640x480 in 256 non-interlaced and then it's at a freq. of about 56 Hz. The Falcon show this mode at 78 Hz! And also run in real high-color (ie. 65536), which the A1200 can't.

Actually the Falcon-BUS is about twice as fast as the A1200-BUS.

And by the way the Falcon-BUS runs at 16 Mhz and can run up to 20 Mhz with a accelerator of some kind. With 20 Mhz it's possible to run in 640x512 in 65536 colors non-interlaced at 56 Hz.

Of course if FastRAM is used in the Falcon, then the FastRAM runs at CPU speed.

> Oh, and the DMA structure in Falcons and STs is supposedly better than
> that of the Amiga.

Yes, it's about twice as fast too.

> as an email or a newsgroup po ting cou d po ibly be at acked by vir s!

Well, given the low-ish intelligence of the PC Users that I have
experienced, they'd probably think in the following way :

- Its part of the embedded macros that are included in (virtually) all
text files.

- Macros are powerful.

- Macros can do anything.

- Macros can become viruses.

- Text files can then become carriers of viruses.

- "I can catch a virus from reading/loading/viewing a text file".

And, magazine editors, running on a fifteen-seconds-to-deadline time
constraints, generally do not have the budgets to employ someone
intelligent enough to debunk such rubbish. So, it gets printed.

The general public reads it, and believes it.

And a new(er) urban folklore gets born.

++++

Now, let's start a new "computer industry" alert and see just how big the
hoax can get:

All copies of Windows 95 will stop working as of ten seconds past midnight
on New Years Day 1996. It was a trojan horse virus planted by a
disgruntled ex-Microsoft employee in a fit of revenge at being fired after
publicising the bugginess of Windows 95. But - there is an evil twist to
it : ALL hard disc data will be selectively scrambled so that it can not
be recovered.

(BTW : The preceeding is purely fictitious. So no lawyers, OK?)

3838. Help needed in Robinson Requiem/Ishar III

Newsgroup: comp.sys.atari.st
Date: 1995-12-15 00:00:00 UTC
From: miqco@sci.fi
Message-ID: <30d1e56820f9df0@sci.fi>
Source record: 154374

I just got the Game called Robinson Requiem to Falcon. I also bought
Ishar III. Both are in CD format (and compatible with PC too).
Those are the good news.
They come with French manuals. I ordered them from System Solutions.
I send manuals to Silmarils, and I hope they'll send me English ones.
I now there is quite a situation in France now, so I don't expect
any miracles in time it takes to get them.

Robinson Requiem seems to be quite unstabile in my Falcon, I hope
it can be installed somehow to my HD. Ishar works better, straight
from CD too. Both games make own savegame directory to my C partition
and I dont like that at all (I use C only for all the system
files and to boot, and avoiding any other purposes I have quite
stabile machine here).

Some notes about both games...

Robinson Requiem:
- After I saw the animation in the beginning, I expected a lot of
this game.
- Pictures in Gamebox are from which machine ? I haven't tried it
on the PC yet, but if rumour of using same pictures is true,
then there is no those nice textures/graphics even on PC.
- You get stucked (totally!) to hills quite often. I have used the map
sight when I'm travelling. It's faster compared to any other methods.
- With textures (...krhm???...) and big window It's not playable.
I use big window, no textures(low detail), and use the mapsight
every time I travel.
- There seems to be sound problems in AVI files (Sequenses when You
meet somebody).
- Death is coming too easily. I expected a game, where I can play
a part of Robinson Crusoe, but _not so_ seriously. Playing games
should be fun too. I think the idea is good, wonderin around and
managing with your skills. So the playin can continue forever...

Can anybody help me to get started with Robinson Requiem, I haven't live
more than 2 days in game because of death for various reasons.
- I have boiled water, and drinked it, I think it's okay but matches
last only for 20 fires (20 days). But even if I drink water, it don't
seem to work anyhow, blue barrel in computer dont get up.
- All I have eat, dont have any effect, but poisoning.
- I have gone to cave, and only once There was a light. If I make fire
it dont help, any ideas ?

Ishar III:
This is my favourite.

- This one too, have long, quite fine animation in the beginning of game.
- As a sequel to ISHAR II, which I liked a lot, this seems to
be better. Yeah, and I can use my old (saved) party too.
Problems:
- Because the manual was in French, I started game in English. Then saved,
and start the manual check part in French, save the game, and continue
in English (Easy living).
It didn't help me anyway, because I haven't found any interesting thing
from where I travelled through the port. Even the Map don't work, so
I'm not quite sure is there everything o.k.

I tried Esscode & found that it would not decode multi part UUA messages
from other machines, it usually could not find the next section.
If you edit the files to put in what Esscode looks for, then it seems to
work o.k, but this is a real pain on large files.

I could never get the mime decode function to work either.

When it did work, it was really fast.

The only ATARI software that I am aware of to us the PAC extension
for graphics is...STOS BASIC, you will normally find STOS uses MBK
files for graphics as these also hold STOS information in the
headers, but the same grapghics can be saved as PAC and is the
pure binary version,
The only way to unpack these is actualy in STOS Basic, unless of
course someone knocks together an unpacker progra, ten minute job,

If the original poster has no STOS contacts then please feel
free to encode and send me one of the files, I will investigate
furthur,if it is a STOS .*.PAC file as I supect then I will gladly
make a unpacker program for you, no prob's :)

3843. FS1 Editor for Atari ST

Newsgroup: comp.sys.atari.st
Date: 1995-12-15 00:00:00 UTC
From: John Maxwell Hobbs <jmax@interport.net>
Message-ID: <4at25k$elb@park.interport.net>
Source record: 154379
Cross-posted to: comp.sys.atari.st,alt.midi.music

Does anyone know of an FZ1 editor for the Atari ST other than Avalon? Or: does anyone want to sell a copy of Avalon at an extremely low price?

Thanks,

John Maxwell Hobbs

No, Cab is good. The problem you mentioned is definitely with STiK. I also recommend you get www116.zip as there are some major improvements (mainly in Cab).

I feel flattered, thank you 8-) My job pretty much keeps me from working
with my TT these days, let alone writing articles about working with
an Atari computer. I liked writing those articles (and I guess it
showed 8-), though, so I miss it.

> Does your HD-Driver work on Falcon?

Steffen Engel added Falcon SCSI routines to CBHD. We do not have any
IDE routines *yet* (most important reason: I don't have a Falcon).
If anyone would be willing to contribute IDE routines to our
freeware harddisk driver, he would certainly be most welcome.

>The error message I get is 'access denied' (-36).

Maybe the directory attributes don't include 'w'-flag (r-xr-xr-x). Try
'chmod' to change these flags to 'rwxrwxrwx'.

There is NO disk-editor etc. to change the 'low-level'-data of
MinixFS-partitions! This is only possible for plain TOS-partitions!

Maybe you should use 'fsck' to check the integrity of the Minix-Parition
too.

Ciao... Arno

>I'd like to know before I take ma STE (TOS 1.04/1.1.1990) apart ... :/)

yes, the STE comes with SIMMs that are easy to plug in/out.
There are 4 slots available, and you have to use SIMMs in pairs (i.e.
never 1 or 3 SIMMs)

>mv c:\tmp\first.prg c:\auto
>mv c:\tmp\second.prg c:\auto
>.
>mv c:\tmp\last.prg c:\auto

I guess the reason most of us bought the ST was because it was an easy
computer to use.....
An easier way would be simply to:
1) create a folder on the boot disk/partition
2) copy the auto programs in the order you want them, from the auto\
folder, to the new folder.
3) delete the auto\ folder
4) rename the folder with all the auto programs in to "auto".

But I guess you all knew this already.... ;-)

Message-ID: <4ardam$104f@melimelo.enst-bretagne.fr>
Source record: 154429
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st

Hello,

I have had some problems with deleting files and folders on big machines (convex, hp, and co...) a few years ago. The solution i found is the following:

- go to the level where your folders are (supposing they are on the same level; if not, repeat the solution)

- create a folder on the level above:
mkdir ../toto (for example)
- move all folders (those you want to delete, and the others) and files of the same level in this folder:
move * ../toto
- go to toto:
cd ../toto
- move files and folders you want to keep in a safe place
- delete the folder toto:
rm -fri toto

With this solution, you can delete files and folders create in bad ways or with bad name and so on.If you can't move your folders, it's another problem such as protection, permission of writing, ...

Regards

You don't need write permission for an object to remove that object.

> you might also
> have to do this to the directory which _contains_ the directories you
> want to delete.

That's what you need, write permission for the directory which contains
the object.

If necessary, you can invalidate the i-nodes and than run fsck, this
is normally the way fsdb(8) works, but it doesn't exist for minix.xfs
under MiNT.

> Am I missing something really obvious here, like permissions or user privileges?

Maybe, try `chmod -R o+w .' .

>I'm looking for an IDE interface for my 1040STE. I'm aware of the MultiBoard,
>but that's too expensive for me. Does anybody know about other IDE interfaces
>and where I can buy these?

You're not the only one who's been looking for this- I have for over a
year now!
I've actually found several ads. for IDE interfaces that work with the
STe, but I've never actually gotten any proof that they do exist. When
I try to contact the dealers or producers they either tell me that IDE
interfaces for the STe dont't exist/don't work or they don't reply at
all.

I've had a look in Hard & Soft's catalogue, and they do have an IDE
interface that works with the STe via an adapter, but a local dealer
here phoned them and they said it didn't work with an STe (?????).
I haven't bothered contacting them myself, maybe I should...

There's also another company in Germany called Gellermann & Fellmuth
which sells an IDE interface which is pretty cheap, and I've been told
that they sell an STE specific version as well.
Now, I've written them a few times, someone else I who was interested
tried to fax them, but they never replied either of us.
So all in all I've given up the whole thing, especially since I got
hold of a used ICD Link II and harddisk.

But I'm still interested in the IDE thing, as someone else needs a
harddisk in his STe, and it sure beats the usual external SCSI unit
method with an interface for the ST, in price.

Anyway, here are the addresses, in case any of you want to try again-
please let me know if you get any replies from them!

Hard & Soft Computerzubehoer GMbH
Obere Muensterstrasse 33-35
D-44575 Castrop-Rauxel
Germany

If you have ISO-8859-1 you can see the accented characters here;

Hard & Soft Computerzubehï¿½r GMbH
Obere Mï¿½nsterstraï¿½e 33-35
D-44575 Castrop-Rauxel
Germany

Tel: [+49] (02305) 18014 Mon-Fri 09:30-13:00/14:00-17.15

Fax: [+49] (02305) 32463

(I think you can omit the first "0" in the area code if you call from
outside Germany)

They sell the "AT bus TOS card" which doubles as an IDE harddisk
controller and TOS expansion card (though with an STE you can upgrade
the TOS to 2.06 using the TOS sockets themselves). I think you need
TOS 2.06 to be able to boot the harddisk from itself. If you have an
older TOS you can still use it, but need to boot from a diskette).

From the Hard & Soft catalogue I have (April '95);

AT Bus TOS card incl. TOS 2.06 (German) DM 179,-
AT Bus TOS card without TOS 2.06 DM 99,-
Adapter for STE call for pricing
mounting kit for 2.5" drive call for pricing
mounting kit for Mega ST call for pricing

Gellermann & Fellmuth GbR
Frankenbergstr. 38
D-12589 Berlin
Germany

Tel: [+49] (030) 6480479
Fax: [+49] (030) 6481271

(Remember to omit the first "0" in the area code for calls outside of
Germany- I'm not sure, but I think you should do that).

"Ideal 2.06"- TOS 2.06 and IDE harddisk/ATAPI CD-ROM interface.
Incl. "HDdriver" and CD-ROM software.

"Ideal RTC"- TOS 2.06 and IDE harddisk/ATAPI CD-ROM interface
+ realtime battery backed clock.
Incl. "HDdriver" and CD-ROM software.

Ideal 2.06 (without TOS 2.06 ROMs) DM 89,-
Ideal RTC (without TOS 2.06 ROMs) DM 149,-

Personally I was thrilled to see the ad. for the above company- and
would order the Ideal RTC without blinking an eye- if they'd only
reply, giving any sign of their existance before I send them my money!
I'd be real interested to hear if anyone reading this has been able to
get in touch with them, or know about any other IDE alternatives (low
cost that is).

3866. Re: Alternative to CAB?

Newsgroup: comp.sys.atari.st
Date: 1995-12-15 00:00:00 UTC
From: szhays@chip.ucdavis.edu
Message-ID: <4ar46m$6f1@mark.ucdavis.edu>
Source record: 154434

STIRRE31@MAINE.MAINE.EDU wrote:
: I was curious if there was an alternative to CAB to use with STiK.
: My problem is that CAB will seemingly stop doing anything usually
: within five minutes of use. It will begin reading a page, for example,
: and then do nothing. Does anyone else have this problem? If so,
: was it fixed with the newest version (I have WWW108.ZIP)?
: Of course, the problem could be STiK or they way I have things
: configured. Any ideas would be greatly appreciated.

Hit your escape key to get out of the "freeze." Then go to a different
link. Right now I think most of these problems are due to STiK, not CAB,
but I have no inside information. BTW, the package is now up to www116.

The only alternative will be the Oasis Web Browser when it comes out
(they promised it before Christmas, I believe). This uses NOS instead of
STiK, so even if STiK is the problem it would work. Of course, it may
have all of its own problems.

Otherwise you will have to go beyond standard TOS, such as LINUX, or wait
for something that hasn't even been announced yet (in this newsgroup anyway).

From: jhovila@muikku.jmp.fi
Message-ID: <4aruq1$coj@muikku.jmp.fi>
Source record: 154435

Oh lord... The one and only word processor I've got is 1st Word Plus. As I haven't got the money to but anything better for now, I have to keep on using that peace of shit... Now my problem is the printing: I'm using Atari SLM 804, which is attached to the same DMA-port as the hard disk drive. How do I print to it with 1st Word Plus? I've got the correct .CFG file for the printer, but if I try to print through parallel, nothing happens and if I send the output to serial port, my modem goes crazy... If you can help me, please do so! Thanks! :)

daniel@lust.demon.co.uk () writes:

>This may be a moronic question but is it possible to access the same hard drive
>from two separate STs?

When using 2 STs this is possible but risky because when both machines
access the drive at the same time the bus will be blocked.

When using a TT or Falcon this is easier because both machines have a real
SCSI bus and when using a driver with bus arbitration support (CBHD, HuSHI,
HDDRIVER) the bus won't be blocked even when several machines try to access
the SCSI bus at the same time. But one problem remains: When writing data
the computers don't interchange information about the sectors that were
changed. This can lead to corrupted data if more than one computer is
allowed to write on a harddisk shared using bus arbitration.
BTW, bus arbitration also works when connecting a PC or Mac to the same
drive a TT or Falcon is using. Bus arbitration is a SCSI-2 feature, not an
Atari specific one.

Theoretically, that's true. But understand that Atari computer owners
will want to see the Jag supported as they still want to see Atari thrive.
I for one want the Jag to succeed, but with the way Atari keeps shooting
itself in the foot while Sega and Sony are seriously pushin ginto the
game market...what can I say?

3872. STE system for sale

Newsgroup: comp.sys.atari.st
Date: 1995-12-15 00:00:00 UTC
From: ae661@freenet.buffalo.edu
Message-ID: <DJn5J7.n0G@freenet.buffalo.edu>
Source record: 154440

Hi -

I'm selling my STE system to finance more PC goodies. I'd like to sell the entire system as a package, but I will consider selling individual parts (of course at the price I'm asking, you can buy it and sell the parts and make money).

Here's a list of what I have:
1040 STE 2mb TOS 1.60
ICD FAST 50mb HD
3.5" external (720K) drive
SC1224 color monitor
SCM124 mono monitor
Generic two-button mouse (quite nice actually)
Practical solutions cordless mouse

1st Word Plus
Multidesk Deluxe
G+Plus
Cyberpaint
CyberStudio (Cad 3D2.0 and Cybermate)
CyberTexture
CyberSculpt
CyberControl
CyberVCR
CAD 3D2 developer's disk
Neodesk 3.02
Degas Elite
Warp 9
GFA Basic 3.5E
UIS III
and many games.

I'd like to get $300 plus shipping for the package. The software and hardware, even considering today's prices, is worth much more.

Well I feel a little less out in the cold now, this thread must mean there is about 70 Falcon owners world wide (20 here and 50 on the owners list).

I have to confess the only complaint I have against the Falcon is the OS which is crap, or more specifically Multitos, it's just too slow. Mind you MagiC may well solve that problem.

As for uses I am not venturing into programming and games, previously I only used it for WP and comm, in each case I was well impressed with the software which was available. Sure there is much fewer titles available than for the PC, but in most cases the quality is excellent and this extends to PD an Shareware also.

Happy Christmas

>> Yes, it should be as I've seen several ads for IDE interfaces, but
>> nothing concrete actually. I've been going on about this matter for
>> over a year now, trying to get in touch with the various German firms
>> that make these interfaces but they're obviously not interested in
>> doing business, or the whole advertising thing is a hoax!

>It's not a hoax, as these interfaces do exist, e.g. Hard&Soft sells this
>IDE-Interface-stuff (for STF).
>My does work in a 520STM. The IDE-Interface and a 2.5" IDE-Drive (the old
>one from my F030 :-), it all fits into the 520ST's original case!!!

Well, I did get a catalogue from them and it says that an adapter is
available for use with the STe. But my local Atari dealer phoned them
up and they told him that it didn't work in the STe after all.

I know of several IDE interfaces that work in the older STs (I even
have one here that I'm selling), but as yet I have not heard of one
person who has had one installed in an STe, only seen ads. here and
there (all from Germany) where I get no straight replies or replies at
all if I contact them and ask.

>> Does anyone know anything more about IDE interfaces for the STE?

>Maybe you can use the HBS640T36 for STE and put in the Multiboard, then
>you have an STE with IDE-interface. (But's too expensive...)

yes, I've heard of the multiboard, but I think this one needs a tower
case as it's too big for the usual ST case, and like you say, it's too
expensive.
the reason I'm looking for an IDE interface is because I want to
install a drive cheaply in someone else's STe, because his DMA chip is
broken, and it also saves the money getting hold of a drive in an
external case. (the case/power supply costs quite a lot by itself).

From: hallvart@sn.no
Message-ID: <30d1a4c8bc59642@sn.no>
Source record: 154445

Why are there so many ads. here for people selling their STs?
Not that I mind the ads. but I was just wondering why....

Are people getting tired of their Atari machines? Moving over to other
platforms, or is everybody getting Medusas or other clones? ;-)

I for one, am pretty happy with my STe, but I'm considering getting a
cheap, used Mac because I miss hi-res colour, and a decent graphical
web browser (yes, there is Cab and Stik, but I can forget about all of
that since I don't have a SLIP account), and there are Mac and PC
setups that work with normal terminal emulation accounts-
(yes, I've tried it and seen it for myself).

: there, so it can be accessed in the same way as before !

Actually, you can still reload things offline quite easily. Just click
on the item in your hotlist, or type the URL into the URL dialogue, as if
you were online. If the file is cached it will load up. If not, you
will get an error message e.g. "Could not open file." Of course, it is
still nice to know what file is what, but I prefer to not have the other
problems the old system had.

: Mailto: in its simplest form will do.
: The ability to use FTP links would be quite useful
: A much more reliable system.

Good choices. I would put FTP as more important than Mailto myself though.

Yes, it sure is! I've tried using the "join" function for multipart
UUencoded files, but I've never gotten it to work. Every time I've had
to cut/paste them manually in a text editor, then UUdecode them.
But normal UUencoding/decoding works fine with it.

By the way, are there other programs out there that do MIME/unMIME-
that work! trying to decode MIME messages in ESScode seems to be a
real pain and I've wasted too much time already trying to make it
work.

One thing I noticed was that earlier releases of CAB were very strict
with the way it handled URL's. Many people are lazy about supplying
the trailing slash on a directory URL, and it seems pretty clear
the the HTML specs supply this. Netscape, etc., seem to be able to
deal with malformed URL's: if it is a directory, then it gets the
index file (I guess supplied by the server).

The new CAB is more forgiving, so I wonder if this is just another
symptom of the same thing? Are ~ directory filenames part of the
HTML standard?

Anyways, I got WWW116 this morning via the mailing list. I haven't
tried it out yet, but the blurb was "fixed some bugs in CAB".

: : Yeah, of course, we heard the same thing two years ago with the Falcon;
: : Atari would promote the Jag because they can make money there to support
: : the computer line; development is just "on ice"; they will not give up
: : the computer line etc. etc. I Am sick of all this official Atari crap.

: Incorrect. Atari said that is what they hoped to do, but made no
: promises. I recognize Atari's mistakes, but I am sick of bullshit rumours.

OK, you may be right on this one. But do you really want a list (from
1988 or so) on what they will do and what not? The much beloved TT, that
sjould have comne with 5 expansion slots, the TT/X with Unix, The blossom
graphics card, the EST, the Stylus etc.etc.etc. ?

: : Fact is, the Jaguar has worldwide no market position wahts however

: Yeah ... according to who?

according to common sense.

: ; sales
: : are by far inferior to their competition

: Really? Atari has sold about 250,000 Jaguars in the US. Sega has
: sold 150,000 Saturns. Sony has sold 300,000 Playstations. About 300,000
: 3DO's exist in the US. I'd hardly call Jaguar sales (in North America
: anyway) far inferior.

But _ NORTH AMERICA IS NOT THE WORLD!!!
I do not care how many Jagurs are sold in the US, I am concerned about
how are sold over here. Fact is also, that for a console to stabily
establish itsself, you need world wide sales.

: , and in some parts of the world
: : (i.e. 99%) the Jaguar doesn't even exist

: True, though what would you have them do? Spread their tiny
: resources over the entire world. There's no law saying that you have to
: sell everywhere and frankly, it isn't good business sense to spread
: yourself out over an entire world so quickly.

????
So quickly? the Jaguar is supoosedly available for 2 years now; Atari has
been present in Europe for one and a half decade;
And, actually, as a user or potential buyer I am not at all interested in
why Atari can't do as they should. They do or they don't.
I am no benevolent donor and I do not see any reason why Atari owners
should behave so.

: : Certain projects, such as the Sigma card for PCs, are never heard of
: : again.

: The Sigma card wasn't an Atari product. It was made by a 3rd
: party developer. It was probably axed because their 3DO card wasn't a
: success.

: And even such simole things as a CDROM drive take year to come
: : out.

: If you had a company of 100 people, what would you do to improve
: things? Atari is very dependent on outside sources.

Again: I don't care. I am a user. Life is hard, it is like in nature: If
some animal is not strong enough , it simply won't survive. And There are
much more important things to pity than the Tramiels.

: Most of the people doing support and (hardware) development on the
: : Jag have been fired. I am ABSOLUTELY CERTATIN that here we will never see
: : the Jaguar in the stores in fair amounts.

: Depends on where you live. I see lots of Jaguars, Jaguar games
: and Jaguar CD's where I live.

Judging from the threads, it seems that even the differnces even in the
US in supply are very large. Considering the world wide sales, how much
is "where you live"? 5%? 1%?
But it doesn't matter, since this is thosands of miles away from here anyway.

: : the dropping of the computer line was a major error, such as the decision
: : to leave Continental Europe where they had the biggest market share.

: I agree with you here.

: : IMHO Atari will do it as with the computers; they will makethe transition
: : to PC games manufacturer and until they didn't complete this task, they
: : will make the people believe, they are still behind the Jaguar. This
: : transition will probably take a year, but i do not expect Atari pushing
: : the Jag by the beginning of 97.

: Or they could do what they have done in the past with their game
: systems. Gradually phase the game production out. The Lynx had two new
: Atari-brand Lynx games this year, the 7800 was still getting games in
: 1991. I think the Jaguar will be serviced the sameway. Software is less
: financially straining than hardware.

So what? Is that the argument to take the potential customers from Sony?
It is much more important what 3rd partzy developers do with a piece of
hardware. There are no Atari deveolpments for their computers, yet there
are a number of 3rd party companies that continue development; the OS is
being cloned at least twiuce till now and substantially improved in both
cases etc. etc.; I doubt the situation would better or as godd as if
there were no 3rd party developers and Atari only.

Rgards,

Alfred

I'm using mmencode (aka mimencode) from the metamail package,
available at ftp.bellcore.com:/pub/nsb/mm2.7.tar.gz . Compiles
almost out-of-the-box.

In config.h, right after the `#define NEWLINE_CHAR', add:

```
#ifdef __MINT__
#undef RESET_PROGRAM
#define RESET_PROGRAM "/usr/bin/reset" /* YMMV */
#define sigtype void /* avoid a couple of warnings */
#define __convexc__ /* necessary to compile splitmail.c */
#endif
```

I've got the following three software packages for sale.

Multiplay $20. (original disks, docs, box)... Math exploration, Discovery, Practice for ages 5 - 11. The user can practice addition and multiplication on a grid while using picture puzzles.

MathBlaster Plus $20. (original disk and docs)...User practices addition, subtraction, multiplication, division, fractions, decimals, and percents. [no age level on docs, but seems to provide a very wide range, i.e. from simple to more complex]

Donald Duck's Playground $20. (original disk and docs)..."An action-packed game about change-making for ages 7 - 11" [from the manual]

Add $2 shipping for each software package, or $3 for all three together.

If interested, email me at: ggreenbe@mailbox.syr.edu

Thanks,
Gerry

Atari are often coming out with stuff they might do, take the
Virtuality deal, Atari may not have 'promised' to make a VR system,
but some of us thought it might come round !
>

Too right. Where I live (Midlands) the only people I know who have
even heard of the Jag are those who have an ST. And to be honest,
that isn't very many.

Very Very Very true. I really don't give a monkeys how well atari are
doing in the US, or anywhere in the world. If they are selling diddly
Jags where I am then, thats what affects me.

The Jags been around for sooooo long now, its going to need a zimmer
frame. this crap about spreading itself thinly accross the world is
trash. Atari just need to start trying to sell the damn things. Its
going to get absolutely nowhere sitting in the US and ignoring the
rest of the world.

So bloody what about atari's 100 employees, do you think I give a fig
about how many people they have. That's their tough luck. If you
think people are just going to buy a Jag out of sympathy then you are
much mistaken. If Atari don't get their act together soon, they are
just going to crumble and die, thats their problem not mine !

>: Depends on where you live. I see lots of Jaguars, Jaguar games

True, where I am there aren't Jags, or Jag games, so Atari are messing
up. The Uk, isn't that small a place, and certainly has a market for
this stuff, why the hell can't atari TRY and sell to it ???

>: Or they could do what they have done in the past with their game

Atari has to be more 'aggressive' when it comes to promoting their
product, they unfortuanatly need big bucks to advertise. Or get
tonnes of poeple to develop bucketloads of games so that the Jag can
sell itself, at the mo there are just too few games, for a console
that hardly gets any advertising.

IMHO it isn't going to get any better when atari start with PC
software. There's too much competition from people who are damn good
at writing some really innovative software. Take for instance the
ground breaking Wolfenstein/DOOM and other games like Need For Speed.
Atari seems to have problems writing its own software for the Jag, and
os leaves it all to 3rd Party Developers. In the serious stakes,
there is no way they are going to get past the hype and budget of
Micro$oft. And judging bye the number of bugs in my TOS, which they
wrote, then god only knows how bad the software's going to be !!!

>The only alternative will be the Oasis Web Browser when it comes out
>(they promised it before Christmas, I believe).

I'm glad somebody else remembers this. Phil did say he hoped to have something working by Christmas, but it's all been a bit quiet on that front of late. The last I heard, they were working on the dialler.

>This uses NOS instead of STiK, so even if STiK is the problem it would
>work.

An Oasis web browser couldn't use NOS because Oasis is inactive while NOS is running, and there's no way around this. The whole thing would have to be written from scratch. The Spider menu option present in all versions of Oasis is little more than a sham.

>Of course, it may have all of its own problems.

..non-existence being the main one at present. I wonder if those people who pre-registered Oasis 2 will be entitled to their money back if it never appears. Legally, I think they would be.

STIK has potential, and they've really done a terrific job, but there may ultimately be severe limitations. It's probably not a great secret that you can only run a single Internet application at a time (under ordinary TOS), but this brings up the question of master services - like email.

I notice that a mail client is currently being beta-tested which supports outgoing SMTP and incoming POP mail. This is a bit of a giveaway, because both of these are initiated by the client machine (i.e. your ST). You can't predict when (or whether) SMTP mail is going to arrive, so you need to listen for connections constantly (and deal with them promptly). CAB has an easy time of it because no "unexpected" data ever arrives, and IRC is fairly similar - when you're not talking, you're listening. FTP and Telnet clients are straightforward too. However, dealing with real-time random incoming connections is difficult with a single-tasking operating system. The way I see it, you'd need to run an application which sits and waits for SMTP mail to arrive, then exits after some kind of time limit (or user intervention), freeing up the machine to run CAB or whatever. NOS deals with all this by multi-tasking internally. With GEM applications, the actual OS would have to do the multi-tasking.

> Merry Crimbo
>
> Cheers.....!ynoT

Sue, sorry, it was a bit brief wasn't it.

First off, danny is Danesh B, who runs the atari (and Mac) sections
of the Hensa FTP site. He was at the Atari World Show last week, when
I spoke to him. Apparently Hensa and their funders were going to drop
the atari, amiga, archi and other file sections and just carry on with
a PC section. Danny was going to move on to work for Mag-Net and
setup a new atari ftp section there, which unlike hensa, contains
games as well.

If you want more detail than this, then you are really going to have
to mail danny about it direct.

Hope this helps

Merry Xmas ynoT

Not exactly ,what I meant was when the mouse was active (being moved) it has that
effect i.e demands up in that region of CPU time. This is not the same as saying
that things are slowed down 80% becuse the system might be running 80% idle anyway.

> If so can I connect a PC mouse to the serial port at the back (I don't use a
> modem yet) ??
> I take it that I need to introduce a specific driver aswell ???

No it is built into the kernel you just activate it via the rc.local script.

I forgot to check mag-net out but hensa has only PC stuff ATM, I don't think it has all been moved yet as there is no software for any other systems and doing a directory listing of /micros/ shows only about 5 directuries rather than the usual 20 or so. I geuss that after the new system stuff that they haven't yet set up the restrictions, and rather than leaving all restrictions off so people can wreak havoc they have set all on and will remove restrictions in order of priority. Only guessing mind, I'm sure Danny will set us all straight.

From: aa740@FreeNet.Carleton.CA
Message-ID: <DJotqy.A3q@freenet.carleton.ca>
Source record: 154330

Can anybody enlighten me on using the Printer Initialization String dialog in STeno V. 1.03? I have tried various entry formats but none seem to work. Do you enter strings in hex, decimal, or ASCII format? Do you separate the characters with commas? Should there be a c/r at the end of the string?

The disk help files that cover the various revisions don't offer any "help" on this particular feature. (I'm using a Canon BJ-200 with the Epson LQ settings.)

Eric Hays (szhays@rocky.ucdavis.edu) wrote:

: Well, I can tell you it fixed the bug with transparent GIF's used as
: wallpaper. It also seems to have fixed the bug I was having in 16 color
: mode under Geneva where CAB couldn't find the last 8 colors in the
: palette. So now the program runs pretty flawlessly from a display
: standpoint. Good work Alexander.

I've been running CAB in Falcon 256 colour mode (true-colour
mode isn't yet supported), but it looks wonderful.

So far I haven't had the infamous "runtime error" crop up on me.
Altho, starting with WWW115 and on WWW116, I've had two new weird
bugs.

First, I would get the runtime error, go back to the desktop and
restart CAB. Fine. But after about one minute of using it, the
machine would crash with a cold-reset. I have a feeling it may
be a memory leak or something that left things in a very nasty
state.

Yesterday I got something even more odd. This is the new CAB from
WWW116, and I was happily browsing. I think I was on the Browser
Watch page, cause it's got tables, and other fun stuff that
make it nice to test. Suddenly the screen went white, and the
machine just locked. I couldn't press control-alt-delete, but
had to press the reset button. Dunno if this is related to
the above problem, or just a one-time fluke.

Actually there should be a driver on the Atari LiNUX CD-R, that let's you
connect a PC-mouse to the serial port.

> Float Maths, or the LFED program ??? Why do the programs crash
> without it ??? Why wasn't I told about the need for the program when
> I bought the FPU and PAL IC ????

(BTW, I don't own a Mega STE, but, according to the way a 68000 system works, the following explanation should be close to how it works on the MSTE. The Atari implementation of I/O mapping the FPU complicates it a bit, but...)

The simple reason behind the "why does it bomb?" question is : Because the 68000 can not talk to the 68881/2 direct.

The 68881/2 can only be directly spoken to by a 68020 or 68030 CPU.

The eleven bombs you got is known as a "Line-F Exception". The processor receives an instruction with a hexadecimal value $Fxxx and says "duh. I dunno how to handle this", and takes a Line-F exception.

What LFED probably does is place a handler function in memory that springs into life whenever a Line-F exception occurs, and translates the instruction into a form that the 68881/2 plugged into the Mega ST(e) can deal with. The floating point computations (FSIN, FCOS, FLOG, FINTRZ etc) are then handled by the FPU.

Whilst this is certainly slower than direct CPU-to-FPU communication, it is still _much_ faster than software emulation. And because the 68881/2 use an 80-bit real numbers internally, it is also a _LOT_ more accurate than software emulation as well (which usually limits itself to 64-bits because 80-bits can increase emulation time considerably ove the already slow 64-bit)

I know one thing, I've never seen one here in Canada. The first I
heard of it was here on the internet. Surprises the heck out of me
that its been out for two years! I used to be be a big 8-bit fan
(still am I guess, just juiced it up again). I would have been more
than interested in a game system by Atari. I'd been contemplating
buying a SNES, Sega, etc., but had never even heard Atari had the Jag
out. There certainly hasn't been any marketing here in Canada.
Haven't even seen it in Wal-Mart.

:
: Anyways, I got WWW116 this morning via the mailing list. I haven't
: tried it out yet, but the blurb was "fixed some bugs in CAB".

Well, I can tell you it fixed the bug with transparent GIF's used as wallpaper. It also seems to have fixed the bug I was having in 16 color mode under Geneva where CAB couldn't find the last 8 colors in the palette. So now the program runs pretty flawlessly from a display standpoint. Good work Alexander.

Still quits sometimes downloading pages, still fails to resolve host sometimes. I suspect some of this may be due to STiK. I know Steve Adam no longer has Internet access, so I don't know how this problem can be resolved if it is in STiK. Plus, support for PPP would make this a usable product for so many more Atarians.

3932. GEM for PC Gold Pack - Rare, Unopened and Cheap!

Newsgroup: comp.sys.atari.st
Date: 1995-12-16 00:00:00 UTC
From: cb092@FreeNet.Carleton.CA
Message-ID: <DJoo3A.4E3@freenet.carleton.ca>
Source record: 154399

As some members of USENET readers may know I've done a fair amount of
experimenting with the Atari Desktop's first cousin, GEM for the PC.
This software product (by the same people as wrote GEM for the Atari) makes
a humble DOS machine launch programs, copy files and generally operate
just like an ST.

The big difference is that the PC runs IBM applications not Atari programs.
In other words, instead of clicking on the name or icon for Word Perfect 4.1
for Atari, you do the same deal and launch WP 6.0 for DOS. The new desktop
on your PC looks very similar to that of your ST.

GEM for the PC runs any IBM compatible application what can be run from the
DOS prompt (even those that won't run in Windows or under DOS Shell).
Additionally, it can run special GEM for PC applications which take advantage of
this interface's common font sharing capabilities, desktop accessories, etc.
(like those of the ST).

Recently, I was fortunate enough to have a chance to buy six unopened copies
of this software, dating back to the final release of this software (in 1989).
All are unopened and include original licences and original 3 1/2 726K disks.

The package consists of the GEM for PC Desktop software itself (a three disk
set), plus seven native GEM for PC applications, as follows:

GEM Desktop Publisher - a two disk set similar in characteristics to Timeworks
Publishing Partner, but with a lot more zap; at least when run on a 386.

GEM Graph -

GEM Word Chart - Posters, maps, graphs, etc.

GEM Draw Plus - Advanced drawing capabilities

Bitstream Fontware - Same fonts as featured on the ST (Dutch, Swiss, etc.).

Bitstream Fontware Installation Kit for GEM 3, and

GEM Filter Pack PCX to IMG and IMG to PCX - this one runs even on PCs
that don't have GEM Installed. Great for people who want to get new PCX
files, from the IBM, world into their ST.

I got a good deal on this stuff from a friend and am willing to pass the
savings along to any interested USENET readers and "cling-ons". Specifically
I'm selling these unopened Gold Pack sets (11 disk packages) for US$35 each!

If anyone is interested I'll also include a copy of the earlier version of GEM
for the PC which is a dead ringer for the original ST Desktop (but which
displays in lower resolution than GEM for PCs version 3 and which can't run

all of the noted GEM-native applications, included in the Gold Pack).

If you've got to use a PC at work or home, you might as well make the most of it. GEM for the PC is a step in the right direction. Once these six copies are gone, they are gone, so if you are interested, let me know soon.

Thanks

Keith M.

I guess you will have to be more specific with your problems
starting the computer up. Does the display show a and b disk drives as icons
or is the screen blank? If the hard drive has been formatted already and is
plugged into the correct port you should be able to turn it on first, wait
till the light goes out and then switch on the computer and it should auto
boot from the HD. You are in the right area to get answers but you need to
be specific with your problems to get help. Good luck!

From: balkcom@jhunix.hcf.jhu.edu
Message-ID: <4athbc$1ha@news.jhu.edu>
Source record: 154403

About 8 years ago, I had a game called Bard's Tale. (The first game I had for the Atari :).) Unfortunately, when I was about to win it, I left my disks near a fireplace and for this reason no longer have the game. Electronic arts no longer supports the atari, and for this reason cannot replace my old disks. So, can anyone zip up the disks for bards tale and mail them to me? Surely the atari version has passed into the public domain by now, since I can't even find 'bards tale' for the ibm on the internet... I'm in finals week at school; I need some computer games to play <grin>. Please, anyone?

I recommend "Connect" which is an excellent terminal emulator program.
It's shareware, but the demo version allows for a 30 hour test-run,
which is a pretty generous gesture if you ask me.

It's well worth the sharweware fee as well, where you get a printed
manual too.

Does your father have a 1MB ST? I'm not sure if Connect will work with
512K, but the demo will give you an indication.
It's available just about anywhere, like at umich.edu, but don't ask
me about the directory etc.
good luck!

My mistake, Linux boots ok. When I startx, the program errors
whilst looking for the "Atari" keyboard and returns to Linux.
I will try to boot with Atari keyboard this weekend and see
if that was the problem. I know that the Keyboard Gizzmo is
not compatible with software/hardware that uses the mouse/game
ports (Screen Blaster/ Videomaster Falcon).

I am selling my 1040STe. The system has been upgraded to TOS 2.06 and
4 Megs of ram. I am asking $375 or best offer. Also, I have an ICD ADSpeed+
for sale with DMA cable for $50 and a SC1224 Color Monitor for $75. Will
not sell the latter two items unless the computer goes first. For all items,
I am asking $475. If interested, please e-mail. Thanks,

Theron

3943. Falcon HDD speeds...

Newsgroup: comp.sys.atari.st
Date: 1995-12-17 00:00:00 UTC
From: thietavu@news.abo.fi
Message-ID: <4b1v8o$5st@josie.abo.fi>
Source record: 154210

New speed records for Falcon IDE drives, I think... ;-) !

HowFast: 3.570 kB/s

RateHD 3.5: 3.030 kB/s - 11 mS

Transfer1: 3.940 kB/s

Drive: Seagate Decathlon 5660A
Driver: HDdriver, multiple r/w enabled
Caches: No caches used.
CPU: 68030/36 MHz (18 MHz bus speed), Falcon FX 1.1 speeder active
OS: Geneva r004 (!)
Video: 816x608x16

Who would have believed this: more than 3.5 M/s on a 1992 designed Falcon..?
I certainly wouldn't - but true it is.

It seems to me that FX 1.1 boosts HDD access quite considerable...

Tommi

PH> !?!

Hi Phil,
The problem is that you need a PAL-chip to be able to use an FPU in the Mega STe. Once you've inserted the PAL, all FPU-programs should be able to use the FPU. I work at a company in Sweden, that takes care of Atari repairs and much more, but we haven't been able to get our hands on this PAL for over 6 months, and even Atari UK don't know when we can expect it to be delivered.
If you're lucky, there could be some retailers or service centers that still have the PAL in stock, but it seems impossible to get hold of new ones from Atari themselves :(((((

Good luck in your search...

The latter seems to be true. But try this: use the provided "light" icon
RSC-file (black & white), especially in 256 color mode. Then it doesn't
look quite as neat, but neat enough - and is _much_ less memory hungry..

Greetings,
Tommi

Yep. But, Microsoft uses a "performance inversion" algorithm in all it's
software. So the faster the computer is, the slower the program will run.

(Shades of a "HAM95" thread in a.f.c about three months ago...)

> Magic but I can't think of many more.
> __

I run MagiC 4 on my Falcon, and it's exstremely fast indeed. It also has some very nice disc-access and serial routines, that makes the general performance very good. It can also do background DMA-diskaccess, so that things like copying and deleting etc.etc. doesn't influence the system performance at all.

For instance, you can take a number of files and copy them from place to another and while the computer is doing that you just iconify the copy-window and continue with your work. Same goes for running a BBS in the background, runs very fluent, downloading and uploading can be done _without_ making the system crawl and unstable.

But there are a few programs that don't run properly under MagiC 4.
WinRec v.1.3x, ZERO-X, CLA 3 and ImageCopy 3.5 are some of them, I would assume that these problems will be sorted out pretty soon anyway.
Remember MagiC is new on the Falcon, and there are a few Falcon programs that need to be adjusted to run under MagiC. And than again there are also programs, that doesn't run under MultiTOS, but runs fine under MagiC. I think MagiC 4 is a very fast, reliable and nice (professional) looking OS.
And it has a lot of MultiTOS's AES 4.1 features like drag&drop, iconify etc.etc.

Keep Cool and Flying...

I do not know if Foresight will run on a Falcon, but I'm sure the author
may be intrested in having a Falcon test-site if he hasn't already. The
software is DONATIONware, send whatever you think it may be worth i guess.

The number for TSO is 1 310 543 5483, just leave email to the sysop or
maybe try email to "bhauer@stdntmail.lmu.edu" if you would like to find
out more / download the Beta-application.

Pin 16 and 17 on the 030? (Like the Mighty Sonic?). I would be
interested how they control the Fast Ram. I think that was one
of Wizztronics biggest problems. It's odd that on my Mighty Sonic
some programs are able to use all of the fast ram without problem
(ImageCopy) but Apex Media only works with 16 megs of fast ram
installed. I'm using 14 megs of ST Ram as well, and have not tried
4ST/32FAST, so it may just be the amount or ram that Apex can "see".
Mabey if GE-Soft would have answered some of my mails, I would consider
another of their products, but without support from them I think I
will "wait" for the Hawk or the BlowUp FX with Fast Ram. For a fast
TOS machine I have a Quadra 900 with a DiiMO 50mhz 040 and 128K CPU
cache. It benchmarks faster than the Medusa (GemBench 156%) Hello,
GE-Soft, are you there?

On 16 Dec 1995 14:50:32 GMT ,Twas none other than Henrik Lunardi Weide who did state ....

> By the way, have you got your December issue of Atari World ?????

err , yes I have the decemeber AND the January Issue !!!

> I haven't recieved ANYTHING yet, and now we're writning the 16th December !!!

I received the december issue on the 3rd or 4th and the January issue on the 10th of this month !

> It's pretty annoying, since Atari World is a good UK magazine, but always late.

The story is that they have sorted out the problems that delayed the last two issues (novemeber & Decemeber) . Basically it seems that most of the people involved in it underestimated the work involved in meeting deadlines due to basically inexperience (as Vic had left and he was more than just a pretty face in making this sort of thing happen <G>) .... all allegedly of course :-)

Hi Takashi,

I think you said you have a Falcon Rack. Does Linux work with
the Deka II keyboard interface? I'm using the Keyboard Gizzmo
from Chro-Magic. Linux boots ok, but when I run X, the program
errors as it says it can't find the Atari keyboard.

: vertically. Alas, as far as I can tell, there's no vertical hold
: adjustment on my television. Does anyone know why this is? I
: am sorry if this is a stupid question :-).

This is most probably due to that almost all demos are using PAL (50Hz),
american TV sets are using NTSC (60Hz) and some of them are not capable of
any other frequencies. All newer TV sets SHOULD be capable of this, at
least this is how it is in Europe, all newer European TV sets are capable of
60Hz besides the "standard" 50Hz.

>If you can help me, please do so! Thanks! :)

Get hold of __Laserbrain__ .... it's a must have for slm804's... it's in the
PD.

It's an .acc which intercepts epson/ibm output to a printer thru the
parallel port, and coverts/redirects it thru the dma to your SLM804.
It also gives much improved screen dumps and will convert most gdos fonts into
laser fonts.

It allows you to use your laser with progs (and there's a lot) which don't
support the diabolo emulation...

ATB,
Smn..

I find that if you hold it down and let it repeat a few times, it gets
picked up and acted on. I guess the computer doesn't scan for keyboard
input continuously.

One way is to move them all to another part of the drive, delete the auto folder, make a new one and move the file back in the order you want to have them run. I've done it this way and it does work.

... The solution to a problem changes the nature of the problem

Gaven Miller (gmiller@inca.co.nz) wrote:
: Has anyone noticed that the names of Atari clones are based on old
: (usually Greek) mythology?

: Not an exactly warming name for the product, is it?

Quite the contrary, the names (to me) bring up visions on awesome
power.

: if you were to buy a computer, and were given three choices 1) Model
: 2349/23A, 2) "Medusa" or 3) "Hades", which would you pick?

I would choose "Hades"! I sure as hell would NOT choose "2349/23A".
What kinda name is that? Just a generic marketing type name to give
the machine a feeling of "oh, it's just the same as everyone else's".
We purchase Dell systems at work: the XMT590 series. Bleagh. How
corperate.

: If it were me, I would shy away from the negatively-named products.

If I were to name machines, I would choose evil names from various
mythologies. How about Yog-Sothoth or Morgoth. I want the machine
known as a serious, kick-ass, no quarter given, and no prisioners,
system.

: And what is wrong with using names from Greek mythology that have positive
: names? "Zeus" [the chief god of the Ancient Greeks, ruler of the heavens]
: for example?

Boring :-)

I can shed light on this one - the TERMCAP variable that TOSWIN sets
does not have all the entries - I have this fixed at home (which is
3000 Km away right now). I will be back on Jan 10 and I can post the
fix then - it simply means setting TERMCAP yourself in your
tcshrc.csh (or whatever your version of tcsh uses). You need four
additional entries for up, down, left, and right. I figured
it out by just looking at other termcap entries so you may be able
to do the same. I was going to try an update TOSWIN for AES > 4
features and fix small things like the termcap entry.

Good Luck,
Sam

3977. HELP! 1st Word Plus and SLM 804 (yack!)

Newsgroup: comp.sys.atari.st
Date: 1995-12-17 00:00:00 UTC
From: jhovila@muikku.jmp.fi
Message-ID: <4b14jv$50h@muikku.jmp.fi>
Source record: 154346

Hi!

Still got this stupid problem... I've got 1st Word Plus (phew...) and Atari SLM 804. I've also got the Diablo 630 emulator for the printer, and it works fine. Now the problem is that I need to print scandinavian characters too -- a and o with two dots on them -- and the Diablo emulator doesn't support these characters. What should I do? (Buy some other wp-program, I guess... Just haven't got the money...) I've also got SLM804.CFG printer configuration file for 1st Word Plus, but I guess that the problem with it is that 1st WP doesn't know how to print through the DMA-channel. Is there a program that would send all the data sent to the parallel port to the DMA-channel? Please help!

Yea, I know it's long in waiting. One of the problems in developing
hardware for the Atari's is Atari. Steve said they have a working
"Clone" board that is smaller than the Falcon board. But, Atari
has not responded to their request for a use agreement of some sort.
So what you have are a bunch of guys that have probably built a "clone"
but can't even think of releasing it. From the phone conversations with
Steve, I can say he KNOWS the Falcon motherboard. As we carry on a
conversation, I with field service manual in hand, he is talking off the
top of his head :). The Afterburner has been a long time comming, at
least as long as the Barracuda. It's here. Mabey the Hawk and Barracuda
are not far behind. In the U.S., the Afterburner is good news, but
without an importer that will support the product, it is only "Euro"
news. Anyone want to buy a Mighty Sonic (without support of course)?
Toad has released information that they will be carrying the FX card
for $250.00. If one dosen't work, i'm sure they will get it working
or make good on the deal.
I didn't have such luck with my Mighty Sonic purchase.(579.00).
I know that Toad has contacts with Peter at GE-Soft, but no mention
of they Afterburner is included in their statements. Mabey they are
willing to wait a little longer for a local developer. That would

(will) be good U.S. news :) Soon, hopefully, all of us Falcon users will have 040's, and we can all be happy (er). :) I still like mine as it is. It can only get better!

Mike

Yup, their still here. They make a neat device for the Jag called
the CatBox, as well as still supporting the "old" Ataris. A few months
ago I had asked Tom if my version of ICD Pro was current. After
assuring me it was, he said that an update was fourth comming.
No details.

Put simply, TOS 2.x is exactly the same as TOS 3.x.

The only real difference is that TOS 2.x was compiled for the 68000 CPU
(and hence can be used as an upgrade for STs) and installed in the MEga
STE, and TOS 3.x was compiled for the 68030 and fitted to the TT.

Nope - all graphics capabilites stay *exactly* the same.

> Pak030 board with Tos 3.06 installed. Is the graphics even better?

There is a graphics board available for the PAK3 - but this is extra money.
The TOS 3.06 on its own gives you no extra graphics capabilites.

> I know a few of the advancements 2.06 has over 1.62, but I know very
> little about 3.06. Whatever information someone could give me will

TOS 3.06 is very similar to 2.06 except it is for 68030 CPUs only.

Roland.

>Remember MagiC is new on the Falcon, and there are a few Falcon programs that
>need to be adjusted to run under MagiC. And than again there are also programs, that doesn't run under MultiTOS, but runs fine under MagiC. I think MagiC 4 is a very fast, reliable and nice (professional) looking OS.
>And it has a lot of MultiTOS's AES 4.1 features like drag&drop, iconify etc.etc.

How do you solve this? Can it be run in "single mode" or do you have
to run TOS to be able to use those programs?
I'm using C-lab/Emagic's "Notator SL" sequencer package which I
understand doesn't like Magic- how would I run this on my STe with
Magic installed?

AFAIAC CiX is the place to be for UK Comms using Atarians.

BTW if you are recommended to CiX you don't have to pay the 25ukp sign on. So consider this a recommendation, and when you sign up as per AW's instructions you will be asked if you have an offer code word (or something similar). Type "FRIEND" and save yourself 25ukp.

Then come and join us in atari.st :-)

BTW the OLR package you have to download (Cixcomm & Cixread) are 20ukp each to register. They are worth every penny and will save you in the long run.

Several months ago the CiX service was a bit slow, but it is months since I have even had an engaged tone.

You won't regret it.

I've been on CiX over 2 years now - and wouldn't want to give it up. Its
certainly worth the money to me - though I only use it as an email and
conferencing system. I haven't signed up for their IP service.

> Demon is a bit of a roller-coaster ride as regards service, how does

Its hard to compare as they don't provide the same service. Demon isn't
CiX - so no CiX services.

> CIX compare? How many posting to atari-specific conferences are made
> daily?

I should say well over 100. It can vary alot.

> It sometimes seems that I for one am missing out (see this month's
> AW features with several references being made to CIX).

Most of the AW writers are on CiX - so its bound to get a mention.

:-)

I got my modified Jaguar back a couple of days ago and keep it connected
to my old STE since the connection cable (for the ROM port) is _very_ short.

The setup works fine, but I've not yet had the time to do write anything
for the Jaguar.

With the PSX and Saturn out and selling, and the Nintendo 64-bit machine due along with the M2 sometime next year, Atari's chances of shitfting large numbers of Jaguars _this_ Xmas would look to be very, very, slim. Lets face it, if they couldn't make the Jaguar a sucess when it only had the SNES and Genesis/Megadrive as competition, what on earth makes you think its going to be a winner when the PSX and Saturn are actually out with better games?

>These folders are not corrupt, as I can copy in & out files.

I've come across one obscure situation where this can occur, which no-one
else seems to have mentioned yet. (I'm assuming you've using MiNT and
MinixFS to access your Minix partition.)

MiNT protects against any directory being removed if that directory is
the currect directory of any process currently in the system. Check that
you haven't got any stopped jobs whose current dir. is the one you're
trying to delete.

This can happen if, for example, I go into directory foo, 'less *' to
examine the files, Ctrl-Z to stop less, then I forget about the less, and
eventually decide I want to remove the directory and all its contents.
I then get 'access denied' messages when I 'rm -rf foo', reminding me to
check for stopped jobs. As soon as I kill off the 'less', I can remove
the directory.

Hope this helps...

That's only 50% of the truth...

Programs written in Pure C (Borland C) will automatically support that
type of FPU - if they were compiled with the normal FP library. If the
special FPU library was used, then they only work on a TT/Falcon.

I don't know how other compilers handle that problem.

I have, and cancelled my Demon account soon after.

Taking up the IP service will also give local-call access to CIX conferencing,
via telnet. Such access is not supported by CixComm at the moment, though.

The signal-to-noise ratio MUCH higher on CIX than Usenet. It really is
the top forum for Atari people.

Have you tried a recent FreeMiNT version compiled with "-DMULTITOS"
(e.g. the binary from the FreeMiNT 1.12.5 binary distribution)?

I think there are certain oddities connected with screen management
when using MultiTOS on the Falcon which can be circumvented in this
way.

> there was no error message. (I am running Gemini)
>
What do you mean : None worked ? Be a little more specific.

How did you change the ASSIGN.SYS ? You should put the font names directly under each of the lines with a number smaller than 9. These correspond to the different screen resolutions. The actual files (the fonts) should be copied to the directory the first line of ASSIGN.SYS points to (C:\GEMSYS generally). AMC GDOS must be in the AUTO folder. After reboot VDI should know the fonts and when running Gemini you should be able to pick any non-proportional font from those newly-installed in the dialog for setting the windows parameters. If that failed, you might have installed only proportional fonts.

Cheers Peter

For Sale: From stuart@online1.magnus1.com

Atari ST and accessories:

1040 STf SUPERCHARGED:

- EARLY Motherboard; this is the good model.

- Z-RAM 3D/4Meg fully populated. No pingrid! Soldered in.
Power to original 1meg has been cut to conserve power.

- AdSPEED 16 MHz 68000 accelerator. Socketed. Speed switch on
back of computer for hardware switching. Includes QuickST II
software. Bugger really flys! Microsoft Sucks!

- TOS 1.04. Six chip set.

- 38400 Baud harware mod. Soldered in. Switch on back.

- Z-Keys hardware IBM remote keyboard interface. Not installed
now, but can be done in ten minutes.

- All UNDER THE RF SHIELD! It all fits. I had to do some
modification, but it is clean. NO heat problems.

- Includes left-handed mouse, all original manuals, and assorted
other stuff that came with it.

All for $250 or BEST OFFER

Other stuff:

AdSCSI HD controller and Seagate ST-296N in custom pizza-box $150 OBO
case. Built out of old Wyse PC. 100 Watt power supply.
Room for two 5.25 inch and one 3.25 drives. Includes all
cables. Professionally assembled. No bad sectors.

Supra HD controller w/DB-15 to DB-25 cable $20 OBO

SM-1224 Color Monitor. No burns. Reliable Goldstar model. $50 OBO

SM-124 Mono Monitor. Video comes and mostly goes.Goldstar.AS-IS $BO

No problem, I'm running MagiC 4 pre-emtive multitasking.

> The way I
> see it, you'd need to run an application which sits and waits for SMTP mail

> freeing up the machine to run CAB or whatever.

This freeing up is only neccessery in cooporative OS's like TOS and Geneva
(without MiNT), with MultiTOS, MagiC or Geneva (with MiNT) you can do this
program you're talking about as a running "background daemon" or similar.

> NOS deals with all this by
> multi-tasking internally. With GEM applications, the actual OS would have
> to do the multi-tasking.

Many users should really upgrade to MagiC or somthing similar, since TOS is
getting seriously out-dated. I'm running MagiC 4 now on my Falcon, and NEVER
ever wan't to go back to TOS or MultiTOS again.
To run in 256 colors under MultiTOS is terrible, but under MagiC it really flyes :-)

Keep Cool and Flying...

The developper of the Afterburner told me on the ProTOS, that he was
working for GE-SOFT and developped their stuff, originally. But he also
told me that GE-SOFT is bancrupted, because of the Eagle, so maybe that's
the reason why they didn't answer.

a> compare? How many posting to atari-specific conferences are made
a> daily?
a> It sometimes seems that I for one am missing out (see this month's AW
a> features with several references being made to CIX).

There were 200 Atari CIXen in the atari.st conference the last time I looked. There are also conferences for System Solutions, Titan Deigns, Compo, HiSoft, ST Format, Atari World, ST Applications and 2500 (!!) other open conferences, with file lists available in each conference.

We probably get around 100 messages a day in the conferences I'm in. I haven't had a busy line in 6 months (over a 100 lines running at 57k6 using v34 modems).

They now have direct Internet access as well and POPs covering 80pc of the country - more soon.

The 25ukp registration fee can be got around, but you'll need to register the CIX Atari software to get the most from CIX, although a PC OLR is provided by CIX as well AIUI.

I haven't seen AW9 yet, but I'm told it's got a pretty decent section on CIX.

Hi Dana!

: After all of those years using MichTron, is RatSoft a major improvement?
: I've been running MichTron for almost 9 years now and there would be a
: helluva lot of work to re-build from scratch - is it worth it?

Oh yes! the only downside of going from Mich to Rat is that you have to
get your users to relog in and be verified as users, AND....this is the
bummer, if you have large file sections, you need to redo complete file
descriptions again. BUT....for absolute ease, configurability etc., etc,
I'm glad that I have RATSOFT up and running now.

Ratsoft can be as easy or as complicated as you want it to be.

Hey, after your recommendation, STeve may even give you a BIG discount 8-)

Regarding multiple files (parsed uue) < ie., 1/1 1/2 1/3 etc > :

I don't know how the rest of you are running, but rather than hassle with
the efforts to get good browsing from CAB at this time, I just use the
VT100 thru FLASH II and my server gives me a BSDI unix subsystem via
PINE and LYNX.

Anyway, when I encounter multiple uue files, I just keep EXporting to the
same filename and each time am asked if I choose to overwrite or append.
I APPEND and when all is said and done, I have the original BIG file
reassembled. I then use the 'uudecode' command which turns it into a
useable JPG, ZIP, TXT or whatever, which I DL and enjoy .....
Occasionally the resulting files are TARed or GZed, in which case you
will need those decompression prgs ...

Indeed. Furthermore, if you join CIX conferencing you get the opportunity
to join CIXIP, which is a vast improvement over Demon IP.

: I try to open a URL, I get the resolving host msg, then, after a while, I
: get a blank page! Before, I would not even get a blank page. I would be
: resolving host forever! I have set the DNS to the one reccomended by my
: provider. Is anyone else running STiK/CAB on a mega ste, tos 2.05. 4 megs
: ram, speedo Gdos version 5?

I've had the same experience with a 14meg Falcon, only with a file read error after several minutes of "resolving host" in versions prior to 1.15 - I guess the blank page is an improvement 8). I've tried numerous config experiments but the non-results are consistant. The browser itself is great, and from discussions I've seen the problem is probably related to ovl or STIK. I hope somebody figures it out - we need to get Steve Adams back on the net, I think.

Can you legally get AES 4.1 then? If so, please tell me where, as
I have made the solemn vow to buy it the instant it becomes
available, since I have already tried it (and put it away again due to
various serious bugs and my lack of RAM).

How did it get outside of Atari in the first place?

>If you use the standard MiNT 1.12, the original GEM boots fine (I
>don't know about FreeMiNT 1.12, I haven't tried it). In fact, original
>GEM is the default if no INIT= or GEM= line is given in MINT.CNF.

>based Atari, you may also need to try disabling memory protection
>by renaming MINT.PRG to MINTNP.PRG).

I know what the problem is - it's BlowUP. But this puts me in an
awkward situation: Choose between having a nice big screen (ideal for
multitasking!) of actually _do_ multitasking on a small one. That is
why I got AES 4.1 - just to see if things worked with that one. It
did - but I didn't have any memory left, so I don't use it anymore.
But that doesn't take away the fact that I _have_ used it - and so
should pay for it. But where?

^^^^^^
Do you mean Martin `WINX' Osieka's MiNA? I understood that his
efforts are postponed ATM (computer broke down?). The N.AES marketed
by OverScan (and bought by me straight away!) isn't MiNA, is it?

>to work on such projects (I'm working full time for a digital video

Hear hear. But I understand you are _not_ involved in the FreeMiNT
project? That seems a tough decision to me - like giving up your
intellectual `child'.

.PAC was also the preffered format for STAD, a German mono art package. It consists of a 640*400 mono bitmap packed using a *very* efficient method. The shareware program Munch (written by me, incidentally:-) will read .PAC files and save as PI3, which should make things a little easier, as converters from PI3 to PC formats should be easier to find.

Hope this helps...

4041. What's happened to Current Notes Magazine?

Newsgroup: comp.sys.atari.st
Date: 1995-12-19 00:00:00 UTC
From: mmiller@nyx10.cs.du.edu
Message-ID: <4b5t8b$4op@nyx10.cs.du.edu>
Source record: 154155

Recently I bought all the issues I could find of Current Notes for this year. The last issue I found was the June/July 1995. In that issue, Joe Waters, the long-time editor of CN announced that he was giving CN to someone else because he was getting too old to handle managing the magazine and doing his day job. So he had to quit the magazine.

The key issue is that he said he was handing it off to someone else, who he expected would continue CN, in a different format and such. But since that issue, I have not found another issue of CN. Did it die? Is it continuing? If so, could anyone who knows please post the address where one can contact the magazine, or the editor of it.

Thanks,

---Mark

4044. TAF ppp dialback problems...

Newsgroup: comp.sys.atari.st
Date: 1995-12-19 00:00:00 UTC
From: borst@cs.utwente.nl
Message-ID: <4b5vr7$qnf@utrhcs.cs.utwente.nl>
Source record: 154158

Hello,

I have a problem with the setup of the TAF internet package to connect
my atari st at home to the dialback of my university using ppp.
I installed the TAF package, changed the configuration files in the /etc
directory and changed the /usr/ucb/chatfile script.
Dialing in seems to go ok, but after the connection is established i am
not able to start a telnet or ftp session.
When I use telnet for instance (telnet neutje.cs.utwente.nl) nothing
happens. When I use the IP address (telnet 130.89.12.58) it says 'Trying
130.89.12.58' but again nothing else happens.
I am not much of a network guru, so if anyone can help me with the
problem, it will be much appreciated.

I have a 4Mb ST, with TOS 2.06 and a 384000 baud serial port upgrade (with
a switch). My modem connects at 28.8kbaud. My auto folder just contains
drvin.prg, mfp.prg (from hsmoda6) and mint.prg (from the TAF package) in that
order. I tested with 384000 and 192000 baud, with and without hsmod6, but had
no luck. Below I give all the network statistics I was able to squeeze out
of my ST and the /etc/ configuration files I used.

Thanks,
Pim Borst.

ST was original

STF had floppy drive

STFM had floppy and TV modulator

STe was 'enhanced' STFM, which had a blitter chip and newer TOS
(operating system).

Mega range were PC-desktop style, as you'll be aware. Mega STe was styled
on the TT, and could take an internal hard drive. Also had an internal
high (rather than double) density floppy drive. Also has a LAN port on
the back if i recall. Mega STe also has TOS 2.05/6.

I think that's right anyway!

Cheers,

Matt.

Well MagiCMac is running on Mac-hardware, and Mac-hardware is quite different
to the Falcon-hardware. Remember MagiCMac only accepts clean GEM-programs.

MagiC on a (real) Atari compatible computer is something else, MagiC 4 for instance,
accepts Falcon-specific DSP-programs and such.

Of course!!!, I knew I had seen the PAC extension somewhere else other
than STOS,but could not remember, everyone I asked had never heard of it,
So thats STOS and STAD, as that a high rez, prg ? then if the original
posters graphics are two colours then its more likely to be STAD but if
more than 2 colours then probably STOS.PAC, :)

One thing wonders me about this Keyboard-Gizzmo or whatever, I mean it's a
PC-keyboard converter - right ??

Why are there incompatibilities ???

My PC-keyboard converter from DDD, plugs directly into the keyboard-plug on the motherboard
and no drivers or anything are needed, since the Falcon believes it's an Atari-keyboard.
The mouse & joystick port is on the converter, so that they can
be connected there. The DDD PC-keyboard-converter is a little piece of hardware that
emulates the Atari-keyboard signals on it's own.

4049. RELEASE ANNOUNCE : CLAv3

Newsgroup: comp.sys.atari.st
Date: 1995-12-19 00:00:00 UTC
From: "Craig. Graham" <Craig.Graham@ncl.ac.uk>
Message-ID: <4b73ik$es3@whitbeck.ncl.ac.uk>
Source record: 154163

As the moderator of atari.announce seems a little lax these days, and I tried an announce there last week...here's another announcment :)

ANNOUNCING.....the availability of CLA Digital Developer Version 3.

A complete re-write of the CLA digital electronic design and simulation system, providing improvements to every aspect of the design process, wrapped up in a GUI to die for....

Here's a few features:
o Fully GEM'ed, MultiTOS compatible, colour icons, windowed dialogs, multiple design views.
o Hierachical design (block structuring) - CLA always had it, now it has a new Hierachy Navigator as well.
o New Simulator, with scrolling Logic Analyser & Word generator windows (multitasks simulation even under single TOS).
o GDOS support - printing & metafiles, Speedo Compatible.
o VHDL compiler included.
o New FSMsynth PAL synthesis program.
o Graphical Finite State Machine designer.
o Context sensitive help.
o Drag & Drop module library.
o Encapsulation (re-partition existing designs into blocks)
o Group operations, all new schematic editor that's loads easier to use.
o Faster Delete & Move operations.
o NVDI / EdDI off-screen bitmap support to speed up re-draws.
o Falcon, TT, ST & MagicMac compatible.
o Auto-routing of wires (only useful on a fast machine).
o Full colour schematics (CLA2 was black on white only).

there's loads more....check it out.

Where is it?
ftp.uni-kl.de /pub/atari/incoming
ftp.cnam.fr /pub/Atari/incoming

Craig.

>Have you tried a recent FreeMiNT version compiled with "-DMULTITOS"
>(e.g. the binary from the FreeMiNT 1.12.5 binary distribution)?

I got a compiled binary from someone else - I don't have GCC and the code produced by my Pure C 1.1 was _very_ unstable (alas...). It was compiled with -DMULTITOS, as someone pointed this problem out to me already.

It didn't solve the problem, though. But as soon as I have enough memory and HD space I'll get GCC and experiment some.

When I want to select a URL, CAB displays an error dialog, saying that it can't find, e.g., c:/wwwcache/00000001, when the cache folder is set to c:/wwwcache.

Well, I guess there shouldn't be anything in the cache folder unless you have visited a site, should there?

Is there a remedy for this?

Try clearing the HD cache. Maybe that is the solution.

Actually this came with the FPU. I got them from Best Electronics
(Brad Koda) in San Jose, California (while he was visiting the UK).
The PAL IC, was 13UK Pounds and the FPU 20UK pounds. If you contact
him you may be able to purchase the PALs through him.

Thanks for replying. Some of the other posts suggest my problem is
with the compiler and libraries used. I really appreciate your help
and hope you manage to find some PALs.

The FPU uses the Line-F instructions. Unfortunately, Atari used those
codes in TOS. The newer versions are Line-F free, but I don't know
exactly which versions.
If you want to use the FPU, you should get a newer TOS.

Yes, in fact, I love Thing so much that I will definitely register it,
and I recommend this stunning piece of Atari software to all of us who
have at least 4 megs of RAM. It's funny, yesterday I told my friend how
great it is to see that ONE man can make something better than the Mighty
Microsoft Corporation with its hundreds of highly-paid programmers!!

Do you hear this, Arno? People like you keep this platform not only
alive, but also kickin' =) !

> If Dan Wilga would add those to NeoDesk, I'd use NeoDesk all the time :)

I wouldn't anymore.. Geneva, though, is great..!

I believe you neet an HST modem on the other end to get 9600 baud. Otherwise it just connects at 2400 as you have seen. HST is just not used as a standard by too many people.

4058. Need help with old Supra harddisks

Newsgroup: comp.sys.atari.st
Date: 1995-12-19 00:00:00 UTC
From: jlockwoo@pollux.usc.edu
Message-ID: <4b7pus$1lt@pollux.usc.edu>
Source record: 154172
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello to everyone out there in Atariland... it's great to be back.

Please forgive me for the (basic?) questions. I've owned and used an ST for a number of years but only now has the following come up.

I have just inherited two 20mb Supra hard disks for the ST. Each one of the cases has a bridge board in it that has 8 glue chips on it and a SCSI connector at the end (which hooks onto a normal looking SCSI drive).

First of all: One of these disks is autobooting, another is not. What do I need to do to make the disk autoboot.

The disk that does autoboot has something screwy with the AUTO folder. It gets partway through and then reboots... which rereads the AUTO folder and reboots... you get the idea. Is there anything I can do or any keys I can hold down to suppress the execution of the AUTO folder (putting a floppy disk in does no good).

I have a disk from Supra that allows you to format the disks and do some _very_ basic maintanence. Are the disk adapters general enough that I could use some better software and it would interact correctly? Where could I get good software (which would let me set blocksize and so on)? Are there programs available that create "virtual drives" out of the harddisk to let programs that do direct block access run? There is a program called SUPBOOT.PRG which you are supposed to put in the AUTO folder of any disks you use to boot up when you want to use the harddisk. Is this generic or specific to the bridgeboard?

And finally, the reason for all of this: I have a few Quantum 105 and 210 meg drives. Would the electronics on the boards be able to handle these (the boards date from 1987)? What SCSI id does the drive need to be to be recognized? Is there any way in the universe to hook up more than one drive to the bus (I doubt it)?

Please either post here or email me and I will summarize.

Thanks in advance,

-James

>When I try to uuedecode it I get error messages instead.

You need to get hold of "Esscode" for the ST. And when you use it you
don't even need to get rid of the email headers or any other text.
Works for me!

FreeMiNT = Atari MiNT 1.12 plus patches from the MiNT mailing list;
it's distributed under the same license as the original Atari MiNT.

Check it out at the archive; every FreeMiNT archive contains a list of
changes to Atari MiNT. The latest version is FreeMiNT 1.12.5.

I've recently developed problems on my C: partition. (Falcon)
All directories show up twice. I ran EDGE.PRG which seem to wipe out the problem along with most of my files. Anyway, I went back to my computer today and found the same thing. Edge shows 'File Collision' and '55 FAT Chain Collisions.'

So do I just format my C: partition or should Edge be able to fix this? Also, Edge shows no bad sectors.

****
WE'RE HAVING A NEW SUBSCRIBER'S SUPER PRIZE DRAW!!!!

.....We've got one prize only - and it's a great one!

On June 1st 1996 some lucky new Current Notes subscriber's
name will be drawn from all those who took out a new or renewal
subscription postmarked sometime between January 1st 1996 and April
1st 1996. The draw will be completely random, and Current Notes
employees, contributors, staff, advertisers and volunteers are not
eligible.
****
The Super Prize consists of the following: Outline Art 3, Calamus SL,
the entire series of SARA CD-ROM software drivers, SpeedoGDOS 5,
tbxCAD, First Graph, K-Spread 4 Lite, 1 year Membership in the
Toronto Atari Federation (includes subscription to the Phoenix
Newsletter!), Atari Joystick, CyberSculpt, and the Skyline CD (100's
of megabytes of Shareware, Freeware, and Public Domain software).
****

It's truly a great lineup of software and hardware - a $700 value!
All you have to do is subscribe to Current Notes sometime between
January 1st 1996 and April 1st 1996, for a chance to win! We'll be
adding more prizes to the 'pot'!

be
S > on the net, evenstating that I had caused problems on GEnie, I
S > don't post articles on GEnie atall..
Roger, stop it. I think enough people know me well enough here
to know that I am NOT lying, nor have I lied to anyone on here.

As for the GEnie thing - I was never claimed that you caused
problems on GEnie, EVER. In fact, the original thread, which was not
posted by me, talked about how certain GEnie people were laughing
about the wrongheadedness of a certain Roger W. Sheppard in this
conference. When you replied in your ascerbic manner that they were
"lying", that there was no way that they could have read those posts

ie only allowed
for Internet mail sending and receiving only).
Next thing I know, I get a private e-mail from you in which you
pointed out that fact to me (after calling me a liar), and also
mentioned that the Usenet postings could be had in the ST
ROUNDTABLE's library in compressed files (why didn't you mention
this fact in the open, BTW - or were you afraid of being caught with
your pants down again?) . You also threatened that if I "lied"
again, that you would contact my postmaster and have me kicked off
the board where I access this feed.
At no time have I EVER "lied", Roger. I've been wrong, but I am
NOT a liar. And anything I've said about you here, IN THE OPEN, is
the TRUTH. THE TRUTH.
S > Also this person has never ever lived in OZZ and does not know

and they
S > ment it, to shut them up we refered to them as White Abo's...
I may not have lived in Australia, but I did live in Western
Canada for a number of years, in a very conservative small city.
During that time I, being of a somewhat nonconformist nature (I
dislike bigotry in all forms, think nuclear war is stupid, have
religious beliefs not considered in mainstream Christianity to be
"normal", have this thing against having sex before marriage and
don't believe in "male bonding a.k.a communal barfing" :)) as well
as being a landed immigrant from the United States, I'd been called
many things like a "dweeb", a "dirty Yankee", a "retard", and other
things I can't and don't care to repeat here, had my sexuality
questioned, been roughed up by beer-swilling punks and told to get
out of town, and had even been threatened with death by one redneck

it get to me,
and certainly never tried to get back at other people by hurling
epiphets back at them of a racist/sacreligious nature, nor did I
stoop to their level - well, maybe strongly applied sarcasm :).
TWO WRONGS DON'T MAKE A RIGHT, ROGER! Despite what you may
think, that very term is racist, and designed to hurt people. Or is
that what you want, as part of your little game? Please spare me
from justifying your actions.

> Ignore him completely is the best advice I can give 8-)
Easy to say, hard to do, eh, John? ;-)
BTW, as many of you know, I forward the contents of the comp.sys.atari.* newsgroups to GEnie on a daily basis, for the benefit of those poor individuals out there who are "internet impaired." Strangely, however, Roger's posts never seem to make the cut and therefore -never- appear on that service. It's my way of limiting the spread of his pollution. Why do I do this? Because I can. :)

Current Notes is very much alive and well and running under new
management. Ironically, I just received some mail from them regarding
their second issue and a membership drive/contest. Since you asked,
I may as well post that info right here in this reply:

******** CURRENT NOTES MAGAZINE PRESS RELEASE ********

To: ALL ATARI/TOS/GEM USERS!!
Re: CURRENT NOTES IS BETTER THAN EVER!!
NEW SUBSCRIBERS PRIZE DRAW!!
From: Current Notes magazine

The Jan/Feb 1996(!) issue of Current Notes Magazine will be
available shortly, following hot on the heels of our big Nov/Dec
issue! Look for the Nov/Dec issue in your mailbox (if you're a
subscriber), or on your favorite Atari Dealer's newstand. If there's a
dealer in your area who can't find the NEW CURRENT NOTES, let 'em know
we can be reached anytime at:

Current Notes Magazine
#2-559 Birchmount Rd.
Scarborough, ON
Canada
M1K 1P8

****
WE'RE HAVING A NEW SUBSCRIBER'S SUPER PRIZE DRAW!!!!

.....We've got one prize only - and it's a great one!

On June 1st 1996 some lucky new Current Notes subscriber's
name will be drawn from all those who took out a new or renewal
subscription postmarked sometime between January 1st 1996 and April
1st 1996. The draw will be completely random, and Current Notes
employees, contributors, staff, advertisers and volunteers are not
eligible.
****
The Super Prize consists of the following: Outline Art 3, Calamus SL,
the entire series of SARA CD-ROM software drivers, SpeedoGDOS 5,
tbxCAD, First Graph, K-Spread 4 Lite, 1 year Membership in the
Toronto Atari Federation (includes subscription to the Phoenix
Newsletter!), Atari Joystick, CyberSculpt, and the Skyline CD (100's
of megabytes of Shareware, Freeware, and Public Domain software).

****
It's truly a great lineup of software and hardware - a $700 value!
All you have to do is subscribe to Current Notes sometime between
January 1st 1996 and April 1st 1996, for a chance to win! We'll be
adding more prizes to the 'pot'!

If I remember correctly, Bard's Tale I was a copy-protected game. As a
result, its not a simple matter to "ZIP" it up. Besides the legal issue of
distributing such software (even an old game) you'd have to figure out how to
patch the copy-protection routine(s) in order to get it installed on a DS
floppy or on your HD. So in theory it could be done but it most likely
wouldn't work.

BTW, its not that great of a game. SUNDOG was a better ST RPG IMHO.

Ari

4080. RESULT: comp.os.linux.m68k passes 316:16

Newsgroup: comp.sys.atari.st
Date: 1995-12-19 00:00:00 UTC
From: Steve Bonine <spb@ntrs.com>
Message-ID: <819385012.19418@uunet.uu.net>
Source record: 154301
Cross-posted to: news.announce.newgroups,news.groups,comp.os.linux.development.system,comp.unix.amiga,comp.sys.amiga.applications,de.comp.sys.amiga.unix,maus.os.linux68k,comp.sys.atari.st

```
RESULT
unmoderated group comp.os.linux.m68k passes 316:16

There were 316 YES votes and 16 NO votes, for a total of 332 valid votes.
There was 1 abstain and 8 invalid ballots.

For group passage, YES votes must be at least 2/3 of all valid (YES and NO)
votes. There also must be at least 100 more YES votes than NO votes.

There is a five day discussion period after these results are posted. If no
serious allegations of voting irregularities are raised, the moderator of
news.announce.newgroups will create the group shortly thereafter.

Newsgroups line:
comp.os.linux.m68k Linux operating system on 680x0 Amiga, Atari, VME.

Voting closed at 23:59:59 UTC, 18 Dec 1995.

This vote was conducted by a neutral third party. Questions
about the proposed group should be directed to the proponent.

Proponent: Chris Lawrence <lawrenc@cs.rose-hulman.edu>
Votetaker: Steve Bonine <spb@ntrs.com>

RATIONALE: comp.os.linux.m68k

Current traffic on the dedicated Linux/m68k mailing list is
approximately 25 posts/day. In addition, there are about 5 posts
relating to Linux/m68k per day in comp.unix.amiga, and at least 20
posts per day in the multilingual maus.os.linux68k newsgroup, which
does not propogate very widely. Interest in the Motorola 680x0 port
of Linux is growing substantially, and there is no Usenet-wide group
at present that fulfills this need.

CHARTER: comp.os.linux.m68k

The group comp.os.linux.m68k will not be moderated. It is intended to
further interest in, and development of, the port of the Linux
operating system to the 680x0 architecture. It is anticipated that
almost all discussion in the newsgroup will be in English.

END CHARTER.

DISTRIBUTION:

In addition to the groups named in the Newsgroups: header, the CFV
and the eventual RESULT posts will be mailed to the mailing lists:
```

linux-m68k@phil.uni-sb.de

Have you just performed a clockpatch mod? A bad solder job
on the resistors that are patched will cause this problem.
R216, R217, R222.
Reseat the 4 GAL's located in sockets under the keyboard.

I have read that when connecting a PC type powersupply that sometimes it is necessary to change a capacitor on the reset switch. There is a lot of information concerning Falcon hardware in a file called chips172.zip. I don't remember where I found it, and it is in German, but somewhat understandable.

Mike

4082. Eprom Card ?

Newsgroup: comp.sys.atari.st
Date: 1995-12-19 00:00:00 UTC
From: stosser@neon
Message-ID: <4b6at1$nho@neon.airtime.co.uk>
Source record: 154303

Hi everyone :)

A contact has just sent me an "EPROM-CARD" with the simple instructions "snap card into left side of atari, switch on in medium rez', now you have one 1mb with 2 programs callable" This is a snail mail contact in Germany and I only manage to speak with him once a month as I am in England, plus the translation is not up to an explanation :)), so I am stuck ?

I have to be honest and say that I have absoloutly no idea what he is talking about, i have never heard of an eprom card before,

its about 13cmx5cm and seems to have 4 chips marked 27c256 -15 fa
each chip is marked 1H,2H,1L,2L, (marked by hand it seems)

The board is marked 128k .byte-epromkarte,
theres a crown symbol and the large number 9103

I have no idea what to do next?

Whats it for?
What advantages to fitting it?
Is it any good?
Where exactly does it go (once i know then fitting isnt a problem,

About how much are these, this is to give me an idea of the response :)

An idiots guide on this subject would be most helpfull ?:))

My set up,
STE TOS 1.62, 2meg patched to 2.5meg
85meg hard drive, and a Drive B
Thing desktop

No nvdi or any sort of accelerator or any font things, my Auto folder consists of the 2.5meg patch and sceletric fileselector, ho and silmouse, thats it,

Can anyone give me any simple easy to follow info on what i do with it ???????????????? please!

Cheers.......!ynoT

4083. Re: Alternative to CAB?

Newsgroup: comp.sys.atari.st
Date: 1995-12-20 00:00:00 UTC
From: thietavu@news.abo.fi
Message-ID: <4b9bka$e0i@josie.abo.fi>
Source record: 154104

```
: daemons to MiNTnet.
:
: (Yeah, I know, CAB doesn't work with MiNTnet, I'm workin' on it, I'm
: workin' on it...)
```

Before anyone even considers MiNTnet, one problem has to be solved. There _has to_ be a simple, easy-to-use installation kit for the whole MinixFX & MiNTnet-stuff available... What we have now, is almost impossible to set up for any beginner, or even for many others.

This seems to be a joke for many UN*X/MiNT-gurus here, but Atari OS isn't supposed to be a pain to install & maintain, and neither incompatible with many applications. User-friendliness is the key word here, unless we mean to take the place of MS-DOS in the future..

I used MiNTnet for a while - and as it was, it was pure horror: very difficult to set up, badly documented (for someone used to GEM environment!), and MinixFS proved to be even worse. These solutions are _not_ practical for everyday-users, and IMHO we have to make sure everyone can use WWW on Atari computers.

It doesn't matter how great some system is technically, if it is only usable for few people. Do we have any solutions?

TH

EPROM CARD Update :

Many thanks for the info,

I plugged the card into the cartridge port, I never thought to do that as the card does look like it belongs inside the ST, its a little bare to be on the outside, but hey! it fit :)

The first thing I find is that where my drives went up to K, I now have a drive P, this is 129,024 bytes and contains FCOPY3 and a Move.prg that seems to need high rez to run (German alert message<?>), Fcopy works alright but no different from the copy I already have and use,

So I install drive "c" and for the first time ever I actuallu get the computer to open the cartridge port window, this does not display anything with "shoe info" other than the drive name, there are two files in the window, "DELA" and "DELADISK" each have no file extension and are named as above,
Double clicking on either of these and then selecting "show" results in two bombs :(

So what I seem to have is a new very small drive P with Fcopy3 installed, not wanting to sound ungratefull but I can hardley see the point, is there any?

I am a little nearer but still need more information about all this,
Many thanks for the help so far, any more info please :)

Cheers.....!ynoT

Does it fit into the cartridge port on the left hand side of your
machine? I believe that those ports were originally designed to be
used to load programs from (but were rarely used as such). The port
has its own drive letter (I can't remember it ... it definately is a
lower case letter, though ... possibly 'c').
If the card is that, you should be able to plug it in (with
the machine OFF), switch on the machine, put the appropriate device
symbol ('c'?) on the desktop and you should see two programs. Someone
please correct me if I'm talking rubbish.

> Well i have Geneva 4 and Magic2.x ummm..... each has it's good points
> and bad points.

You should try MagiC 4.0, it's a LOT improved over v.2.x and supports the Falcon too.

It's also possible to lauch old dirty programs as single-task applications.

> I like the speed of magix, but Geneva seems to be more
> tolerant of NON-GEM like programs e.g. Freeze Dried which magix runs
> begrudgingly and slooooowwwwly, whereas Geneva runs it purrrrfectly!

That's because Freeze Dried is an old dirty program that doesn't support multitasking. :-)

Connect is a lot better and runs very smooth and fast on my Falcon with MagiC 4.

Keep Cool and Flying...

4090. Re: Don't Buy an FPU !

Newsgroup: comp.sys.atari.st
Date: 1995-12-20 00:00:00 UTC
From: h9250467@idefix.wu-wien.ac.at
Message-ID: <4b9ff0$b41@osiris.wu-wien.ac.at>
Source record: 154111

Phil Hough (phil4@phil4.demon.co.uk) wrote:
: This little post details some of the problems I had after buying a
: 68882 for my Mega-STE.

: 1) After fitting all software that should use a FPU bombed out with 11
: bombs. A small proggy called LFED (LineF Emulator) is required.

: 2) Programs, eg. Zorg, and Crystal Atari Browser (CAB) lock, they
: begin loading, display menus, the mouse still moves, but the menus
: can't be used and the programs just lock.

: 3) Other programs, such as POV 2.xx, and most others (Metamorphosis
: demo, Fractal Playtime) that I have tried bomb out with 2/3 bombs,
: part way through operation, the reason ?? They try to run using 68030
: commands etc.

: Tha problem seems to be that the 68000 in most STs, Megas etc. was
: never designed to use an FPU and consequently all software that uses
: it was written by authors who presumed, the FPU would be used on a TT
: or Falcon, and so almost no software is around that can use it on a
: plain vanilla ST or Mega.

: The above is all my personal experience. If someone can put me right
: then I will consider plugging the fpu back into my computer, otherwise
: its just going to sit and gather dust until I get round to figuring
: out how to program it, and doing some programming myself !?!

The FPU slot in the Mega STE was primarly supposed to take the 68881 FPU
from Motorola; I am using it with my Mega STE right now; this setup is
compatible to the old Mega ST solution with 68881 card that was called
SFP 004.
To make use of the FPU, you need specially compiled software for this;
most compilers provide means for support;
there are some programs that do support the 68881 directly, for example
Texel, Gnuplot, Ghostscript, Skyplot, Technobox cad, to name just a few.
BTW, it is not enough to insert just the main chip into the slot; you
need to insert a small GAL, too.
The combination 68881 + GAL does not make ANY problems with any
applications; I have no experiences with the famous Line F emulator,
however; Do you have the GAL installed?

Regards,

Alfred

From: stevenb@lunatic.ak.net
Message-ID: <TCPSMTP.15.12.20.5.54.32.2310717883.86058@lunatic.ak.net>
Source record: 154113

Hello and thanks for reading. I'm looking for OS-9 for the Atari ST.
It was ported to the ST by Cumana. I know that they do not support it
anymore and that the last version put out was somewhere around 2.4.
I've been told that it was popular mainly in Europe but 5 yrs or so ago.
I have two other OS-9 machines and would like to run some of the
software on my MegaST4. If you have the software or know someone that
does, could you please drop me email? Thanks. I appreciate it!

Everyone says they are, but I was wondering, these days, if a 1040STE with Cubase is an adequate sequencing setup. Does one need a hard drive, or is there some other way to save one's sequences? And does the version of Cubase make much difference?

There seems to be tons of ST software around, but then, why are people selling their ST's?

Thats pretty cool.

I expect that this cartridge is Read Only & AFAIR programs have to run in
main memory, but it should be very fast!!

If you could get a cartridge with all of your most useful utilities, that
might be useful. Maybe these could be 'blown' into your chips.

I remember somebody talking about a cartridge with 4 Mbytes of battery
backed up ram that could be used as a Ram disk.

If you had such a device, could you use it to store all of the small files
that are useful with a shell (ls,more,grep....) & get faster responses.

How would a shell differentiate 'c' (cartridge) from 'C' (hard disk)?

Has anybody ever thought about using EEPROM's to make a R/W cartridge?

>What's it like then? AFAIK you have access to these newsgroups, while

It's er, well, it's ok. I don't have any other comms\bbs experience and i've had no major problems getting on with it. Since June there's only been 1 day when i couldn't get on (the whole of CIX basically crashed), and about 99% of the time i can connect at 28800 with my moded ST, so AFAIC reliability and getting on is no problem. IME the busiest time is just after 6pm when BT calls are at there cheapest, but i've never logged on during the day.

Newsgroups are available, with a nice little facility that allows you to download the headers only of the groups you are interested in, choose the messages you want, and then d/l those messages the next time you go on. I've been told that PC CIX users have to d/l all of the newsgroup, even if only 4 of the 100 messages are of interest to you.

There's also a good shareware OLR for use with CIX only called 'Cixread' and it's comms partner 'Cixcomm'. Both are 20ukp to register, and are well worth it. With them almost everything on-line becomes automated and will pay for themselves within a few weeks.

>without a 25ukp hole in the wallet.

There's a 25ukp once only registration payment, but that can be got around if you know the magic word(s) :-) and there's a 6.25ukp + vat monthly minimum. i'd go on further with the aditional charges but it might be easier if you mail cixadmin@cix.compulink.co.uk and get some info off them.

>How many posting to atari-specific conferences are made daily?

could be anywhere from 30 to 200 in the 'atari.st' conference, distributed in over 20 different sub-topics. There are many other Atari related conferences, such as ones for Hisoft, System Solutions, ST Format, Atari World, and Compo to name but a few.

I've not been on that long, and i know there's a lot still to discover, it's just finding the time... :-)

How does this compare with demon and other services?

From what my ISP has told me, my ISP saves the messages for me when I'm not online and when I log on and use a POP/3 program it sends the saved messages to me. So as I see it, a single-tasking OS can indeed run the STiK mailer successfully (whenever it appears) and that thing about it being initiated by the remote system, and having to have the program connected constantly to get mail is wrong. However, I may be a special case, my ISP could have lied to me, I could have misunderstood that last message (sorry, no message quoting), or I have no clue what I'm talking about 8^)

P.S. Someone tell me (kindly preferably) if my header on this message is screwed. I'm having to use my BBS's e-mail system to send this as STiK does not have Newsgroup capabilities yet (One of the top items on my CAB wish list).

phil4@phil4.demon.co.uk (Phil Hough) said:-

>This little post details some of the problems I had after buying a
>68882 for my Mega-STE.

Hi, Phil!
I've got an identical machine and tried to fit an 68882.
It required a PAL to be recognized by the system.

>1) After fitting all software that should use a FPU bombed out with 11
>bombs. A small proggy called LFED (LineF Emulator) is required.

As I understand it, my Lattice C manuals state that 'line F' can only
be used with the 'co-processor' interface.
That is: a 68030.
You can only use software compiled for 68000 with 'I/O-based' FPU.
I had written a 'Mandelbrot amount' generator.
It was accelerated to about twice the speed.
However I got strange phenonema with other applications like Calamus...

>2) Programs, eg. Zorg, and Crystal Atari Browser (CAB) lock, they
>begin loading, display menus, the mouse still moves, but the menus
>can't be used and the programs just lock.
>
>3) Other programs, such as POV 2.xx, and most others (Metamorphosis
>demo, Fractal Playtime) that I have tried bomb out with 2/3 bombs,

Thanks, I grabbed a copy of AHDI and it works. I see version 5.0 and
an upgrader for 6.0 => 6.1, is version 6.0 not freely available?

>> Where
>> could I get good software (which would let me set blocksize and so on)?

>You can use Atari's installation software, HDX (to be found on atari.archive.umich.edu),
>or you could use any of the commercial packages such as ICD's software.

I've been playing around with HDX with limited success. Does anyone have
some information on how the WINCAP file is put together (the comments in
it are somewhat cryptic). I entered in the correct parameters for my
Quantum 105, and received data errors. Can HDX deal with drives with more
than 1024 cylinders?

>I'm not sure what you mean by a "virtual drive". I assume SUPBOOT.PRG
>is the hard disk driver I was talking about above. I don't think it
>is too specific.

I meant programs that redirect all access to A: to, say, D:\GAMES. Useful
for software that expects to be run off of a floppy. I've found at least
one package now that does this.

No, by blocksize I meant the logical blocksize that the filesystem uses.
I believe that Atari usually used 512 byte blocksizes, but could support
larger ones (allowing for larger partitions). From what I've heard, well
behaved programs didn't know the difference, but badly behaved ones
crashed.

>I still use a Supra adapter, with 8 devices on the bus.

Do you know which revision? My adapter is so old, it does not have an
on board clock. I believe it may be limited to the 20mb drives only.

>Supra software was good (in it's day) but is inferior now.
>You can't have partitions > 32 Mbytes (only 16 if your TOS <1.4), so the

I have the data (from my Sun's /etc/format.dat) but I'm still trying to
get the WINCAP file to work properly.

Thanks.

: > --

Be careful with Ease + MagiC 4:
Papyrus works with long file names.
MagiC works with long file names.
The internal file selector works with long file names.
But Ease V4 does not.
As soon as the win95 long file names are accessible by
MagiC you either should upgrade Ease (V 5 ?) or use any
other shell.
Of course you also can still use 8+3 file names.

Does anyone know whether it is still posible to get hold of any accelerator cards like the T-28,
and also what the basic specs of these 'clone' machines are. I am a music producer so speed and
OS are the only real concerns.

Thanks in advance, Grant.

Hello! I have the for following items for sale, shipping is additional:

ATARI hardware/software for sale:

GENEVA and Neodesk.....Best offer
FirstGraph presentation software.....best offer
Diamond Edge.....best offer
Diamond Back II.....best offer
STalker 3.....best offer
Warp 9 v3.7.....best offer
MacSee.....best offer
MaxiFile from CodeHead.....best offer
Mini Office (Nicely done graphs and stuff, from UK) .....$25.
Learn to Read with Prof...ages 4 to 9.....$5
General Store with Bentley Bear, grades 4-7 .....$5
Mixed-up Mother Goose...ages 4 and up.....$5
Atari 1040 ST with DS/DD drive, color monitor, lots of programs
included.....$150

MAC software and hardware:

Quark XPress 3.31r5, 68k, non registerable, manuals, disks, box, etc.
COMPLETE $250

Adobe ILLUSTRATOR 5.5 upgrade disks only, no manual $50

Backmatic 2.0 highly rated automatic backup utility $5

Aldus Freehand 1.0- use for cheap upgrade! $25

American Heritage Dictionary, third edition, $15

Correct Grammar 3.2, $20

Expresso Calendar, $20

ClarisWorks 2.0 $20

Quicken 4, $15

Grolier Multimedia Encyclopedia 4.0 $20

Iron Helix CD game, great!, complete with disk and manual $25

MicroPhone LT $5 includes shipping

Intermail/ Microsoft mail 1.36. many users. $5 includes shipping

Rental Center helper software and disks and big manual $5 includes shipping

Solitaire Royale disks, box, manual $5 includes shipping

PageMaker 4.0, manuals, disks, box, etc. use for cheap upgrade- COMPLETE $100

CD-ROM drive and software, double speed, "Power User brand" complete with
all materials and software... good as new... $100

Serial cable for Mac. $5 includes shipping

Car Stereo items for sale:
All items are used but in working condition. No, They are not stolen, I
just went through a phase where I liked installing and swapping around the
stuff. Life's too busy to mess with it now. My lack of free time is your
Big Audio Bonanza. And no, I'm not a dealer.
Some items have boxes and/or instruction books.

Car Stereo:
Mitsubishi RX791EM AM/FM High Power auto reverse cassette deck I don't
know the power output other than it says "high power" on the front and it
was always plenty loud for my rock and roll. There is a color code table
for all the wires and connectors so you'll know what goes where. All parts
are there, faceplate, knobs, etc. and it is the two-knob kind (not DIN)
with an analog tuner, pushbutton presets, auto reverse, Dolby, and "NK"
noise killer. All in all a pretty good deck. $make offer

Car Stereo AMPS:
Craig PowerPlay 48 watt amp $make offer
Concord HPA51 100 watt amp $make offer

Car Stereo extra special stuff:
Yamaha YEC-400 Electronic Crossover $make offer

Car Stereo Speakers:
Sony ES-S52 40 watt Coaxial 5.25 inch round speakers with grilles $make offer
Kenwood KFC-162 25 watt Coaxial 5.25 inch round speakers with grilles
$make offer
Craig V203 10 watt Coaxial 5.25 inch round speakers with grilles $make offer

Car ALARMS:
Cliffalarm IMS (interior monitoring system) made by Clifford. Remote
operation from fairly far away. Siren chirps when alarm is set or unset.
Visible flashing LED in the car warns theives that the car is alarm
protected. LED on the remote tells you remote is working fine. Panic alarm
feature sounds the alarm if you hold down the remote button for 2 or 3
seconds. Shock and motion sensor is sensitive to breaking glass, but not
to leaves dropping or cars passing by. Door triggers. Automatic reset
after predetermined time to protection mode.
$25

Audiovox car alarm *BRAND NEW IN BOX* Model AA9147 with 2 remote
transmitters, remote panic, built-in adjustable shock sensor, instant-on
for hood and trunk, manual override, dash mounted status condition LED,
active operation, 114db siren, starter disable
$50

Home stereo stuff:
DBX NX-40 Tape noise eliminator and disc decoder. Much better than Dolby.
$make offer

CAMERA stuff:
Hasselblad view screen for 500CM:
Plain screen #42200- $20

Zeiss Ikon/ Contaflex 35mm camera marked "(lightning flash symbol) matic" on the top, and Contaflex on the 50mm 2.8 Zeiss lens, Compur-x leaf shutter. Lens is "convertable" variety, switchable from 50mm to 35mm by changing the front elements, although I only have the 50mm lens element. Built in meter, and even a rudimentary "auto" mode. With case. I'd call it very good condition... no dings or dents, the textured black covering is perfect, the chrome is perfect, and the black finish is perfect. Optically, perfect. The only rough areas are the battery compartment has a little corrosion on the inside and a little brassing on the outside. A "ready-case" is included but the leather is torn where the front connects to the back of the case. Surely a collectors item- $150

Metz SCA-351 adapter for Leica $25

Jeff Apolis 303-473-0511

SCSI
j>
drive).
j> First of all: One of these disks is autobooting, another is
not.
j> What do I need to do to make the disk
autoboot.

Well, you only need ONE disc to autoboot - this will then set up the driver
and tables for all the other SCSI devices. If more than one device has the
autoboot program written to sector 0 then the disc with the lowest ID will
be the one which does the boot. The way you set up the auto boot is to use
the SUPUTIL program. One of the options is "set
autoboot".

j> The disk that does autoboot has something screwy with the AUTO
folder.
j> It gets partway through and then reboots... which rereads the
AUTO
j> folder and reboots... you get the idea. Is there anything I can
do
j> or any keys I can hold down to suppress the execution of the
AUTO
j> folder (putting a floppy disk in does no
good).

First thing to do is identify which AUTO prg is doing this and remove it.
Maybe someone has stuck in one of those cold-boot programs which waits til
the drives are ready before
auto-booting.

j> I have a disk from Supra that allows you to format the disks and
do
j> some _very_ basic
maintanence.

Mmm. I wonder what version these utils are at? The Supra s/w is pretty comprehensive - more than basic maintenance. Why not look on the BBSs for the latest versions, v4.02 I
think.

j> Are the disk adapters general
enough
j> that I could use some better software and it would interact
correctly?

Yes. I used to have the Supra host adapter rev. 8 (around 1988). They are quite general enough. The only difference I know between the Supra boards and the AdSCSI is that the Supra cannot handle parity so you need to choose your devices appropriately. No bother as 95 1evices allow parity to be
en/dis
abled.

I have used ICD s/w with the Supra board OK. It will sometimes moan that you don't have an ICD adapter attached but what it really means is that you don't have the ICD driver installed! Just install the driver and the s/w is happy. I don't really understand why you want to use different utility s/w though. I found the Supra driver too be quite a lot faster than the ICD
one.
j> Where could I get good software (which would let me set blocksize
and
j> so on)? Are there programs available that create "virtual drives"
out
j> of the harddisk to let programs that do direct block access run?

Blimey! This sounds VERY dodgy! No comment
:)
j> There is a program called SUPBOOT.PRG which you are supposed to put
in
j> the AUTO folder of any disks you use to boot up when you want to
use
j> the harddisk. Is this generic or specific to the
bridgeboard?

No. This booter will work with other boards. And the converse is true -other booters will work with the Supra board. I'm not sure about sticking it in the AUTO, though! This may be the cause of your reset cycling you mention. If you use SUPUTIL to set up the drive it will stick a small boot program in sector 0 and put the SUPBOOT program (remamed to SUPBOOT.SYS) as a hidden file in root. When the HD auto-boots the small prg in sector 0 loads and executes
SUPBOOT.

j> And finally, the reason for all of this: I have a few Quantum 105
and
j> 210 meg drives. Would the electronics on the boards be able to
handle
j> these (the boards date from
1987)?

Yes, provided the Quantums can be set to disable
parity.

j> What SCSI id does the drive need to be to be recognized?

Usually you set your boot drive as ID 0 and then choose other (different)
IDs below 7 for the other devices. This will gurantee that the boot device
is always found at the lowest
ID.

j> Is there any way in the universe to hook up more than one drive to
the
j> bus (I doubt
it)?

Of course. This is what the SCSI i/f is all about! Sounds like you have TOO
MANY host adapters here! You just need one. Off this you chain up to 7
devices of different IDs (well, 6 if you are using an AdSCSI+ board as this
uses ID 6 for it's real time clock). In theory you should disable
"termination" on all but the last device in the chain - this is not a hard
and fast rule, though, more something you adjust by trial and
error.

Tommi Hietavuo TKKK (thietavu@news.abo.fi) wrote:

: Before anyone even considers MiNTnet, one problem has to be solved.
: There _has to_ be a simple, easy-to-use installation kit for the
: whole MinixFX & MiNTnet-stuff available... What we have now, is almost
: impossible to set up for any beginner, or even for many others.

Try KGMD (Knarf's German MiNT Distribution) it includes an install program (it's in German but all you have to do is answer a few questions) that will format a Minix partition, install the basic setup, MiNTnet setup, GCC and manual pages painlessly. X11 is also available but you need more than 4 megs of ram to run it.

: This seems to be a joke for many UN*X/MiNT-gurus here, but Atari OS
: isn't supposed to be a pain to install & maintain, and neither
: incompatible with many applications. User-friendliness is the key
: word here, unless we mean to take the place of MS-DOS in the future..

If you are unwilling to learn some UN*X then don't bother with MiNT. When I first started playing with MiNT earlier this year I knew absolutely nothing about UN*X/MiNT. Now I use it more than I use GEM.

: I used MiNTnet for a while - and as it was, it was pure horror:
: very difficult to set up, badly documented (for someone used to
: GEM environment!), and MinixFS proved to be even worse. These
: solutions are _not_ practical for everyday-users, and IMHO we
: have to make sure everyone can use WWW on Atari computers.

Before I started using KGMD I had MiNT/MiNTnet up and running with ftp, telnet, irc, lynx and tin just from following the MiNTnet FAQ. It wasn't really all that hard to do. As for docs, I've found that any UN*X or Linux doc, FAQ or book will do. In fact I just bought The Linux Bible. I sure wish I had it a few months ago.

: It doesn't matter how great some system is technically, if it
: is only usable for few people. Do we have any solutions?

You could write your own program, or hire some programmers to write one. Or you could be patient and wait for the programs now available (STiK/CAB, NOS/Oasis) to develope further.

Brad

4120. Re: Calling CIXen

Newsgroup: comp.sys.atari.st

On alan@aybee.demon.co.uk, Alan Baker (alan@aybee.demon.co.uk) typed away:
: To any of you CIX lurkers out there..
Yes, you called....

: What's it like then? AFAIK you have access to these newsgroups, while
It is ab fab, man.. I have many internet accounts, and one cix one. I
will never give up the cix conferencing account.

: we internet folk have no access to CIX, without a 25ukp hole in the wallet.
It isn't that bad.. the 25 quid can be waived if you know the password
for that month.. look in a Windows User mag, which have the passwords
nearly every month. I am sure a lot of people will also help you find
the password too.

CIX charges by the minute.. there are two seperate
services.. conferencing, and IP. I am only joined to the conferencing
one, as my IP needs are currently provided by hensa, lancaster and
Magnum... just joining the conferencing side you still have access to
internet e-mail and usenet groups though.

conferencing is: 4p/min +vat off-peak and 6p+vat on-peak
IP is: 1p/min

The min charge per month for conferencing is 6.75UKP +vat, and for
both conf and IP is 15 UKP +vat.

My cix conferencing bill.. I am usually struggling to take it to even
10 pounds incl vat in any month. This is mainly due to the excellent
OLRs available.. cixcomm and cixread.

In my opinion.. cix is a must for any Atarian.. a lot of the
enthusiasts lurk around there.. most of the journos are there... what
else do you need?

: Demon is a bit of a roller-coaster ride as regards service, how does CIX
: compare? How many posting to atari-specific conferences are made daily?
I am not joined to all the Atari groups... but a fair few.. i have
around a 2-300K download everyday.

: It sometimes seems that I for one am missing out (see this month's AW features
: with several references being made to CIX).
Cos, CIX *is* the place to be.:-)

Octopus has networking and multiline capability NOW, and it's much easier to work with and much more powerful than MBBS. But unlike MBBS, you need a multitasking OS (such as MAGIC or MultiTOS) for multiple lines.

To be honest any pictures will do. If you put them through GemView or imagecopy then you can reduce them to the format that calamus wants. Calamus SL is a little better and supports more olour formats like TIFF. Basically pic up any stuff you see on the net.

For more useful 'clipart' stuff then I think you are best getting the collection from a PD library (In the long run It'll probably be cheaper than sifting through loads of slow ftp sites etc. etc. etc.

I've managed to get about 1000pics most in TNY format (a bit of a pain as I have to convert, but not too much of a problem !) and most of these came from PD libs (I would offer to copy them onto your own disks if you mail them to me, but then you live a long way from me). The main reason though for going through a PD lib is that if you use atari ones then the stuff _will_ be suitable. Unlike some PC stuff which are colour, vector art, which cannot be (easily) converted using Gemview or ImageCopy.

Good Luck, have fun and a merry x-mas

: [E-mail pd@mole.bio.cam.ac.uk]

The various pixels on the screen are an obvious memory fault. Whether that
means your RAM is faulty or the hardware that accesses it is another matter.

Pull all your RAM out. (carefully). Turn on the machine. Are the pixels still
there? If so, then you have an MMU or bus fault (possibly something else, but
those are the most likely. If they vanish, then one or more of the SIMMs you
took out are faulty.

Assuming the disk can boot, then you need to run one the of Supra utilities (Suputil - I think) which enables/disables the autoboot.

Yeah - Find the original Supra utilities disk & put it in the floppy.
Hold down the Control, Alt & Shift keys & power up (if you have TOS>=1.4 then only hold down the keys AFTER the drive LED comes on).

The ST should boot from the floppy, you may have to install a 'C' drive icon on the desktop,then you can edit the hard drive Auto folder.

I now use AHDI (Atari's software), it works well enough.

I don't really know what you mean about 'blocksize'. but if you are
talking about virtual memory, you need at least a 68030 processor, sorry.
If you are talking about programs swapping directly to disk, somebody did
write a library of functions like this, but it requires you to 'add'these
into your own programs. Won't work with anything else.

> And finally, the reason for all of this: I have a few Quantum 105 and 210

> drive to the bus (I doubt it)?

I still use a Supra adapter, with 8 devices on the bus.

Put your drive ID's in order 0->7. 0 is first, 1 is second, so the boot
device will be C, next partition (or drive) is D,etc...

Supra software was good (in it's day) but is inferior now.
You can't have partitions > 32 Mbytes (only 16 if your TOS <1.4), so the
105 & 210 Meg drives will have to be divided into max 32 Mbyte chunks.

Also, it does not have information on the newer SCSI drives, so you have
to manually set format parameters yourself = need to know drive parameters
to format properly. You should get the drive spec sheet or a program that
can read these directly from the drive.

The only problem I ever found was that the Real Time clock stopped working
when all drive id's were in use. Probably because Supra used the top id's
for clock functions.

Install a hard disk booter and driver on it. This can be done using the
Supra utilities which came with the drive.

> The disk that does autoboot has something screwy with the AUTO folder. It
> gets partway through and then reboots... which rereads the AUTO folder
> and reboots... you get the idea. Is there anything I can do or any keys
> I can hold down to suppress the execution of the AUTO folder (putting a

Boot up the system without the hard disk, switch on the HD, start up a
hard disk driver from floppy disk. There should be a small hard disk
driver program on your Supra disks. If not, just use a copy of AHDI.

> I have a disk from Supra that allows you to format the disks and do some
> _very_ basic maintanence. Are the disk adapters general enough that I
> could use some better software and it would interact correctly?

Yes.

> Where
> could I get good software (which would let me set blocksize and so on)?

You can use Atari's installation software, HDX (to be found on atari.archive.umich.edu),
or you could use any of the commercial packages such as ICD's software.

> Are there programs available that create "virtual drives" out of the
> harddisk to let programs that do direct block access run? There is a
> program called SUPBOOT.PRG which you are supposed to put in the AUTO folder

I'm not sure what you mean by a "virtual drive". I assume SUPBOOT.PRG
is the hard disk driver I was talking about above. I don't think it
is too specific.

> And finally, the reason for all of this: I have a few Quantum 105 and 210
> meg drives. Would the electronics on the boards be able to handle these
> (the boards date from 1987)? What SCSI id does the drive need to be to be
> recognized? Is there any way in the universe to hook up more than one
> drive to the bus (I doubt it)?

There is a very good chance that your Quantum drives will work with the ACSI-to-SCSI host adapter that you have, but no guarantee. Connecting larger drives is usually more of a software issue, so make sure you have proper software and understand it somwhat before trying.

Depending on the host adapter, you can also connect more than one SCSI drive to it. With the early Supra gadgets, I'm not so confident that this will work. You will probably have to use SCSI ID 0 for your drive when connecting it to the Supra host adapter.

Using multiple (simple) host adapters, you can connect up to 8 SCSI drives to your Atari's DMA bus. A more recent host adapter will allow you to attach several SCSI drives to it.

> I have to be honest and say that I have absoloutly no idea what he
> is talking about, i have never heard of an eprom card before,

I don't have one of these - but I can give a good guess:

What its likely to be is a cartridge with some programs on - so you don't
have to laod them from disk.

Programs loaded onto cartridges are normally accessable via drive 'c'
(lower case 'c' - you'll need to install a drive letter probably).

> its about 13cmx5cm and seems to have 4 chips marked 27c256

These chips will have the programs on.

> I have no idea what to do next?

Plug it in! Assuming its been built correctly - you won't damage anything.

> Whats it for?

Super fast access to 128kbs worth of program.

> What advantages to fitting it?

Ditto. Depends whats on the EPROMS

> Is it any good?

Depends on the contents of the EPROMS again. If they are empty - then it
is not much use.

> Where exactly does it go (once i know then fitting isnt a
> problem,

In the cartrige port on the left hand side.

> About how much are these, this is to give me an idea of the
> response :)

BEST electronics sell empty EPROM boards for about 10ukp. The chips
themselves might be worth another 10ukp. Its real value depends on the
contents of the EPROMs.

:-)

Roland.

4144. Music shareware recommendations?????

Newsgroup: comp.sys.atari.st
Date: 1995-12-20 00:00:00 UTC
From: helling@uwindsor.ca
Message-ID: <DJvDDI.2LF@news.uwindsor.ca>
Source record: 154201

As part of a project of getting a friend hooked up with an ATARI 1040stfm, I am now looking for recommmendations for some simple shareware programs, for music...

MIDI NOTATION: The umich archive seems to have a number of midi sequencers, but little in the way of a NOTATION (make sheet music) program. The notation faq is pretty bare too. Befor he spends a bundle on payware programs, it would probably be best if he messed around with something that starts off for free, and can later be upgraded...

Oh yeh, no hard drive as of yet, just 2 floppies....

MOD- or whatever- sounds: The pc allows all manner of goofy stuff played through a pile of resistors hanging off the back of a printer port. Cheesy input/sampling/ AtoD things exist too, which allow one to sample in 8-bit noise, muck with it, and do limited looping, multitracking, and playback... Anything like that floating around in the ATARI world? Right now, the only sound he's got comes out of the high-res B/W monitor. Even a "pile-of-resistors output DAC" and a basic drum machine substitute would be something....

Slightly off topic: Any simple shareware WORD PROCESSORS out there?? Something for doing up a letter, a resume, a small poster, etc... He's got a simple 9-pin epson, but again, why pay a fortune now for a payware thing, when he is just starting out????

Please post any pointers, recommendations etc...
Thanx... B/H.

4145. NEW ACOUSTIC GUITAR DUO RECORDED ON FALCON 030

Newsgroup: comp.sys.atari.st
Date: 1995-12-20 00:00:00 UTC
From: afn14016@freenet.ufl.edu
Message-ID: <4b8asb$6om@huron.eel.ufl.edu>
Source record: 154202

The new recording on CD will be released at the Cuban 1996 Guitar
Festival. The artists are Raymond Lohengrin Classical Guitar
and Jorge Chicoy Jazz Guitar (the best cuban jazz guitarist who has
performed with Michel Legrand and Joe Pass)
The recording of these new music for the guitar was done on the
Falcon 030 using Logic Audio.
This is a first time recording of the muisc of Cuban composer
Eduardo Martin. 21 pieces plus.

60 Minutes quality tapes are available from:
Guitar Works for $9.99

Please send e. mail to afn14016@freenet.ufl.edu
or send order and payment for $9.99 to:
Guitar Works
811 NW 125th Drive
Newberry, Fla 32669
USA

HT> don't even need to get rid of the email headers or any other text.
HT> Works for me!

Do you, or does anyone, have any good documentation for ESSCODE? I have th

latest version i could find, got it from umich, but the one TXT file is really
sparse when it comes all the commands. I need something that will explain all
the different menu items. The most this thing explains is the OPTIONS, and thos

aren't quite good enough for someone who's still a little unclear about it all.
Thanks.

Yes, Use CoMa! If you can afford the 80 UKP (approx) shareware
registration fee. I would use CoMa myself but for that stumbling
block!

If you want a cheap & cheerful fax proggy, with genuine
try-before-you-buy AND a mere 16 UKP registration fee if you decide
you like/use it, get a copy of Junior Office.

Your program needs to be written in a particular way - e.g. be
completely GEM based, no direct screen output etc. and a host of other
restictions... Then it needs to be inserted into the following code as
indicated: (Source: HiSoft BASIC 1 manual, modified by me)

>SFP 004.

Whats the difference between the 68882 and 68881 ??? Sysinfo suggests
that the FPU fitted is an SFP004 or compatible (something I'd never
come across until you mentioned it).

>To make use of the FPU, you need specially compiled software for this;
>most compilers provide means for support;
>there are some programs that do support the 68881 directly, for example
>Texel, Gnuplot, Ghostscript, Skyplot, Technobox cad, to name just a few.

I haven't yet tried these progs, I will if possible soon.

>BTW, it is not enough to insert just the main chip into the slot; you
>need to insert a small GAL, too.

I thikn I have this, do you know what happens if the GAL is not fitted
??? When I got the FPU it was supplied with also another small chip
which sits in my mega STE in the bank of chips close to the front of
the computer, just infront of the VME Bus metal casing, to the right
of the FPU. It has a little sticky label that says FPU for Mega STE
on top, and the packaging says its a PAL IC for Mega STE and FPU.

>The combination 68881 + GAL does not make ANY problems with any
>applications; I have no experiences with the famous Line F emulator,
>however; Do you have the GAL installed?

See above. Have you tried using CAB or Zorg, both these hang on mine
with or without the LineF program, and I can't imagine either actually
using the FPU.

Thanks, Merry X-mas

B > Subject: Are
B > Ataris good for midi music? Everyone says they are, but I was
B > wondering, these days, if a 1040STE with Cubase is an adequate
B > sequencing setup. Does one need a hard drive, or is there
B > some other way to save one's sequences? And does the version
B > of Cubase make much difference? There seems to be tons of ST
B > software around, but then, why are people selling their ST's?

Just a guess - the ST was the finest game machine of its time. Now it isn't. The pc is today's game machine, and that's what gamers are buying. Result - a lot of STs for sale. If you look in the classifieds, you'll see a lot of older pc's for sale, too - and they aren't half the age of the 1985 ST. They just won't play Doom.

I have a musician friend with an Atari MegaSTe, and a DX4-100. He won't sell his Mega, because he hasn't yet found a pc midi program that he wants to invest his time and money in. The Mega and Notator does all he needs (which is plenty!)

4161. STonX 0.6 released

Newsgroup: comp.sys.atari.st
Date: 1995-12-21 00:00:00 UTC
From: nino@complang.tuwien.ac.at
Message-ID: <4bc7qf$4pr@news.tuwien.ac.at>
Source record: 154055
Cross-posted to: comp.sys.atari.st,comp.emulators.misc

```
Version 0.6 of STonX, the Atari ST emulator for Unix/X has been released.
It is available from http://www.complang.tuwien.ac.at/nino/stemu.html and
ftp.complang.tuwien.ac.at in the directory /pub/nino/stonx/.

A Quick summary of the changes:
- Emulation is now much faster on most systems
- Any ANSI-C compiler can now be used (tested with DEC's cc)
- Frequently used options can be stored in a $HOME/.stonxrc file
- -size has been implemented in a quick&dirty way for testing
- The problems with the configure script have been fixed (hopefully)

Please notify me of configuration and compilation problems as soon as possible.

-nino

Unless you get ICD's PRO utilities, the ordinary ICD stuff will only work with an ICD adapter.

I think you are talking about clusters here ?, yes you can use larger then 512 bytes. AFAIK the cluster size can be 1, 2 or 4 sectors (usually 2 under Atari Corp formatting software).

(Is there a FAQ for this somewhere?)

HDX should take of this when you partition the drive.
I have several 128 Mbyte partitions & one 246 Mbyte under TOS 1.4 using AHDI 5.

Modern SCSI drives (& I am assuming your Quantum's are SCSI) should be able to do a low level format without needing the user to set drive parameters.

Okay, here's the whole story at the present time.

I can get the 20mb disks (a Miniscribe and a Rodime) to interact with the host adapter fine (as long as I run the right driver like AHDI.PRG at bootup).

When I hook up a different drive (such as the Quantum 105 and 210) the results are varied. With a new copy of Supra's hard disk utility program I can format the drive successfully, with AHDI it says there are irrecoverable errors in critical sectors (my guess is that it fails on the first sectors it tries to access). Either way, I cannot access the drive.

The Supra utilities didn't come with instructions, I assume that the SUPBOOT program should be run from AUTO on a floppy to get TOS to recognize the hard disk.

I have had at least one response that the really old Supra host adapters (this was made in 1986, board id "30-0014-4") can't deal with any hard disks other than the original 20mb, and that Supra had a $50 upgrade policy for these adapters until a few years ago.

Can anyone confirm this? Should I give up? Is there an Atari hard disk FAQ out there somewhere?

-James

You should never choose a cluster size other than 2 sectors per cluster.
Anything else is simply not safe under most TOS versions.

What you can do is to increase the size of a logical sector (i.e. more
than the usual 512 bytes).

It should be, but anyway, 5.0 is just fine for your needs. Didn't 6.0 just
add Falcon support? If so, you simply don't need it.

It should be perfectly able to do this. For "real" SCSI drives, you shouldn't
need to specify the drive characteristics. If memory serves me right,
there is a special "command" in the WINCAP file (was it "md=0"?)
which basically tells HDX to just format the drive without trying to
determine its characteristics first.

So you can format and partition the drive using the Supra software, but
if you start SUPBOOT, it still doesn't find the hard disk?

4168. Janus Info Wanted!

Newsgroup: comp.sys.atari.st
Date: 1995-12-21 00:00:00 UTC
From: awatson@pacifier.com
Message-ID: <4bcn9a$63v@news.pacifier.com>
Source record: 154062
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello,

I am very interested in receiving more information on the Janus ST emulator for IBM PC's. I would especially like to hear from users who currently own and use JANUS personally. Benchmarks, compatibility, and just a general user "feel" would be greatly appreciated!

Also, if you could direct me to a few dealers who carry the Janus, I would be grateful!

Thanks,

Anthony Watson
awatson@pacifier.com

P.S. I have a "relatively" slow 486SX2/50 PC with 8 Meg RAM, and Windows 95. I already tried Gemulator 4.0x and my system was just too slow to operate it at any usable speed. I'm wondering if Janus will suffer this same problem?

>with Cubase is an adequate sequencing setup. Does one need a hard drive,
>or is there some other way to save one's sequences? And does the
>version of Cubase make much difference?

Depends what you're looking for... But all in all I'd say the ST is a
great machine for sequencing. Many professional musicians use the
machine for that purpose.

I use my machine for sequencing as well (among other things), but
unlike most musicians I use my STe for everything else as well- email,
text editing, graphics, word-processing, database etc etc...

As for storing the data- no you don't have to have a harddisk (I used
mine without one for 5 years! I only recently got hold of a harddisk
and boy is it a difference!
Anyway, you can start off without one.

>There seems to be tons of ST software around, but then, why are people
>selling their ST's?

Because of all the media hype! People are "told" that a decent
computer has to have a CD ROM, 16 bit audio, *loads* of memory etc
etc.. and a lot of ex-Atari people just haven't seen what's out there
of good software. We don't get things for free (information-wise that
is), so most people who aren't into the Atari scene thinks the
computer is obsolete and crap, but that's not the fact.

After I got Internet access I realized what a great machine this was
as people in these groups weren't discussing the latest games, but
alternative operating systems, the latest shareware/pd software and
all sorts of advanced stuff.
You've already got the right channels opened- subscribing to this
group! Keep reading!

New Aggressive Party 2 Information File

This file contains lots of new and essential information on the
Aggressive Party 2 so even if you have read the original invitation file you
should read this to. New information will be continuously updated to the
official Aggressive Party WWW page: http://www.hut.fi/~shlehtin/aggression/,
check it out for the latest data.

- Information in alphabetical order according to keyword -

Alcohol:

Strong alcohol drinks are not allowed at the party place. Beers etc.
are ok.

Coke:

Coca Cola, Coca Cola Light, Sprite and Jaffa can be purchased from
the party place at a price of 10 Finnish marks per 1.5 litre bottle. If you
bring an empty bottle to a shop you will receive 2.5 FIMs for it. We are
planning on storing about 600 litres for the party, which should be enough.
Drinks supplied by Hartwall.

Compos:

Each entry will go through a strict jury and the ones selected will
later be shown to all party guests who will in turn vote for their favourites.
All demos and intros should return back to the OS correctly except for the
4 Kb intros and all of them must set the resolution themselves. There are no
seperate compos for each machine, ALL COMPOS WILL BE COMBINED! The prizes
will be given out once the product has been released but it must be released
at the latest 2 months after the party.

Amiga entries must run on an Amiga 1200 with 2 Mb chip + 2 Mb fast
memory on an RGB monitor. They will be run from Workbench and, to
help life, should have an icon of their own.

Atari entries must run on an Atari Falcon 030 with 4 Mb RAM or an
Atari STe with 2 Mb RAM on an RGB monitor.

PC entries must run on a 486 66 with 4 Mb RAM. Only the GUS is
supported (1 Mb DRAM).

Demo Competition.

- Size limit 8 Mbytes.
- There is no limit to the amount of entries per group.
- Must be harddrive installable.

128K Intro Competition:

- Size limit 128 Kbytes.
- No limit to the amount of entries per group.
- Must be harddrive installable.
- The intro must be released at the party.

4K Intro Competition:

- Size limit 4 Kbytes.
- No limit to the amount of entries per group but only one per coder.
- It must be released at the party.
- No music allowed (at least it will not be played if there is some).
- Only one file allowed per intro.

Music Competition:

- All normal formats are supported (MOD, S3M, MTM, XM, ULT, DTM etc.)
- When entering the player should be specified but no special rare players are allowed (default Cubic Player/Digital Tracker).
- The tunes will be copied to a DAT for playback.
- Maximum number of channels is eight.
- One entry per composer.

Graphics Competition:

- All normal formats are supported.
- Up to 640 x 480, 24 bit TrueColor is supported.
- Will be shown with QPEG or another good viewer.
- Copies are no allowed.
- One entry per artist.

Compo results will be uploaded to FalconBot on #atari and will be announced at the party after all votes have been counted.

Equipment:

Bring only what you need (ie. computer, yourself). Space is limited so if someone brings a lorry full of equipment he/she will just have to leave it outside. The party place has 2 microwaves, 2 cookers and 3 fridges which can be used by the party guests.

Food:

McDonald's has offered Aggressive 2 guests special prices for their meals at their Kamppi branch. The prices are:

BigMac meal + Shake or Sundae 25 FIM
Cheeseburger meal + Shake or Sundae 19.90 FIM
Normal meal + Shake or Sundae 19.90 FIM

Tickets will be given out at the party with which party guests can receive the above meals throughout the whole party.

Internet:

There will be some sort of Internet connection which will at the least allow you to telnet and use IRC. The party channel will be #aggro. The Internet connection is provided by Xgateway Finland Oy.

Party place:

The party address is still Perhonkatu 6. A large map of the general area is contained along with this text and on the official Aggressive Party WWW page. If there are any doubts you can contact us (addresses and phone numbers appear at the end of this text file).

Payment:

The entrance fee if a place is booked beforehand is 100 Finnish marks and if paid at the door it is 125 Finnish marks. As there is not much space it is a good idea to book your place in time. You can do this by sending an international or eurocheque for 100 Finnish marks to the address below. Make it payable to Kristoffer Lawson. The cheque will be given back to you at the door where you should pay 100 FIM in cash. Alternatively you can send cash directly to the address below or by a giro to the following account number:

KOP 142850-45618

Along with the payment you should specify the names, emails, handles and groups of everyone you are paying for. If you have an email address you will receive a personal letter of thanks. Bring some form of ID with you to the party so we can check your identity at the door.
Girls get in for 20 Finnish marks whether they pay at the door or not. Guys, no pretending to be a girl now! The organizers are intelligent beings, they know the difference.

Prizes:

Exact prizes will be specified at the party but the party organizers will not be collecting any profit from this party. All money will be given out as prize money. Prizes will be given out once the product has been released.
Some software, hardware etc. will also be given out as prizes. These are supplied by Kybersonik and Triosoft.

Programme:

Thursday 28th December

12:00 Doors open, Aggressive Party 2 begins
20:00-> Live music
XX:XX Other special events (animations, demos, net hacking, nethacking, disk throwing, Utopos etc.)

Friday 29th December

~13:00 Megazone game 1
~13:40 Megazone game 2
XX:XX Special events
17:00 Gfx + Music compo deadline

19:00 Demo/Intro compo deadline
00:00 Compos begin

Saturday 30th December

XX:XX Compo results + prizes (after votes have been counted)
16:00 Doors close, party over (bwaah)

Megazone:

Megazone is a laser war game played in a large hall in Helsinki.
There are three teams and 18 players (six in each team). We will be
organizing at least one or two 'Swedes vs. Finns vs. Misc' games depending on
the amount of interest. A list will go round at the party and all interested
can add their name to it. The price is about 40 Finnish marks per game.

New Year's Party:

We are planning on organizing a small new year's party after
Aggressive 2 for people staying around for a bit longer. Contact us if
interested about possible lodgings etc.

Organizers:

The party organizers consist mainly of people from Aggression,
Xtream and Future Crew. If you wish to contact us, see below.

Viking Line:

Viking Line has offered people going to the party special ferry
prices from Sweden to Finland and back. Contact Emphii/Xtream (see below)
for more information or check the Viking Line text on our WWW page.

Voting:

After all productions have been demonstrated each party guest can
vote for their personal favourites and return their vote to the party
organizers. Only one vote is allowed per guest and voting will happen
anonymously.

WWW page:

For all kinds of information see:

http://www.hut.fi/~shlehtin/aggression/

This page is updated continuously.

ZZZing:

There is no real sleeping place but there are some rooms set aside
where it should be more peaceful. The alternative, of course, is under a
table.

Don't know about this. Having just lent my one and only EPROM cartridge
to a friend to check out his cartridge port - I can't check.

> So what I seem to have is a new very small drive P with Fcopy3
> installed, not wanting to sound ungratefull but I can hardley
> see the point, is there any?

This seems about right. The drive is going to be about 128K in size - and
the contents entirely dependent on what your friend had 'blown' into the
chips. Don't know why its listed as drive P though.

Obviously he has a need for Fcopy3 to be instantly available at bootup -
even if no floppy or HD is connected. can't see why however.

The cartridge I've lent is a VT100 terminal emulator. Crude by todays
standards - but was designed to turn the original ST or STM into a dumb
terminal so it could be sold without any disk drives at all.

:-)

Roland.

>about network,
>direct cable or something like that.
>

Try a serial crossover cable and Ghostlink software. PC acts as a slave/server for the Atari. Combine it with HSMODEM6a (or whatever) and you might get some performance out of it.

Before I heard about Ghostlink I was considering something similar using the parallel port. It is possible to run 4 bits in parallel full duplex, but I never completed the task - especially since the author of Ghostlink was going to be doing something similar, but I think he gave up too.

With Ghostlink you can install your PC disk drives (floppies as well) as icons on your atari desktop.

I have tried this at 19200 baud and it works fine, although I find that just copying via floppy is almost as quick for small files.

I never managed to get HSMODEM to work, but then, my 80286 probably couldn't do much more than 19200 anyway and I haven't done one of the serial port hardware hacks to get faster serial I/O

The other method that I have used for PC <-> ST(e) transfer is the same serial cross over cable and zmodem.

I hope this helps

Unless you want to do hard disk recording, a STE is really quite good for
sequencing. You don't get the setup & compatibility problems that plague
PC's.

Also, there are some really good PD & S/W programs available.

I know loads of musicians who would like to get their hands on a ST but
they are really hard to come by here (please, no offers).

Well, the obvious answer to that is ... use Thing!
On a slightly different note ... does Magic4 support some of
the Unix-like properties of MiNT, lke pipes, loadable file
systems, etc?

Have you tried the (plain) MiNT 1.12 binary? Or any MiNT kernel
compiled with -DMULTITOS? That option isn't just for MultiTOS; it
turns off several MiNT features that caused some compatibility
problems, including some screen manipulations.

MagiC 3 supports *some* stuff like loadable file systems (though you cannot use Mint XFSes with MagiC - they need rewriting) and pipes, but not a lot. I think there's enough there to support the Drag and Drop protocol...

I think the best you will find for Pagestream is a 550C driver (I can email
one to you if you cannot find it). For 1st Word, AFAIR you can create your own
drivers so a printer manual should be all that is required.. :-)

Hope this helps...

STs and STEs have a bidirectional parallel port, so it should be
possible to use it for such a connection. The problem is that you
will have to write the software on your own.

Then you should perhaps remove all that neat stuff from the extensions folder that wasn't installed by the Apple Installer.

I have two Macs here (Quadra 950 and PM 7100) and they run pretty stable as long as I'm not launching programs where I know that they're making the machine instable.

>I'm thinking about getting MagicMac to run on my girlfriend's Quadra 630.

Many ATARI programs are not written for 68040 CPUs and might fail if they do self-modifying code. Also consider that MagiCMac does not emulate any hardware registers at all. Software must be prepared to use OS routines only.
So it depends on the software you're going to use.

Anyway, MagiCMac itself is very stable on a clean Quadra since it was developed on a Quadra. Known problems are with the PCI PowerMacs when Speed Doubler is installed.

There are english demo versions of MagiCMac available. E.g, you might find them on the Mac FTP servers, like info-mac and umich (mirrors of then are everywhere). You might use "archie" to look for "magicmac" and "magic-mac".

I messed up above. That is not an ICD ADSpeed I have, it is a ICD AdSCSI+ used to connect SCSI devices to a ST series computer. As mentioned above, I will not sell the aAdSCSI+ or SM1224 Color Monitor seperately *unless* the computer sells seperately. Thanks!

Theron

4195. MGIF 5.00 finally released!

Newsgroup: comp.sys.atari.st
Date: 1995-12-21 00:00:00 UTC
From: d8klojo@dtek.chalmers.se
Message-ID: <4bc7g7$huh@nyheter.chalmers.se>
Source record: 154089

After having been delayed for longer than I care to think about,
MGIFv5 was finally released a couple of minutes ago.
A more extensive release note will be posted to c.s.a.announce
sometime after Christmas.

I've uploaded MGIF500.LZH to atari.archive and ftp.uni-kl.de, and it's
naturally available at the usual place (see .sig).

If you have an Atari ST with a monochrome monitor or a Falcon/TT you
should definitely take a look at MGIF (it does not use any special
tricks for good display in ST colour modes).

Version 5.00 should work on any 8 bit graphics card (VDI) as well as in
any native Atari resolution, including BIGscreen, BlowUP etc.

GIFs, JPEGs, Targas, PPMs and (X)IMGs can be loaded and manipulated in
greyscales as well as in mapped and 24 bit colour.
Save in GIF, Targa, PPM and IMG format.
(A few file formats were left out above.)

- Extremely fast GIF loading
- Extremely fast display (especially in 256 colours)
- _Lots_ of (mostly) fast image processing operations
- Flickering in monochrome to give four greyscales
- GEM interface (without windows)
- ST-Guide manual
- Example files
- FreeWare!

And a lot more...

>no clue what I'm talking about 8^)

Maybe some combination of the last two. (: As I wrote, POP mail isn't a problem because the transfer would be initiated by your ST, and the STIK mailer currently being beta tested is supposed to work with POP. It's the more popular SMTP which requires some kind of "listener". This affects all the people whose service provider is Demon (and who didn't fork out a large amount of money for the extra POP mail service).

> P.S. Someone tell me (kindly preferably) if my header on this
>message is screwed. I'm having to use my BBS's e-mail system to send
>this as STiK does not have Newsgroup capabilities yet (One of the top
>items on my CAB wish list).

It did the job but wasn't the tidiest I've ever seen.. The specific faults I spotted were: the date wasn't in the correct format; there was no "References:" line (useful but not vital); the subject line had no space after the "Re:", and probably shouldn't even have had a "Re:" in the first place (trivial); and the "from" address had angle brackets but no real name component (also trivial).

:
: Try KGMD (Knarf's German MiNT Distribution) it includes an install program
: (it's in German but all you have to do is answer a few questions) that will
: format a Minix partition, install the basic setup, MiNTnet setup, GCC and
: manual pages painlessly. X11 is also available but you need more than 4 megs
: of ram to run it.

Maybe I'll try it... I wonder whether it supports Fast RAM..? X11, I mean.
I used to have a X11 set-up fully working (the Canadian distribution kit),
but the difference between that environment and my Geneva/GEM environment
felt too great. I felt I have two completely different computers inside one
computer.. For example, I had to make certain I don't let Diamond Edge to
optimize or otherwise doctor my Minix-partition. Too restricting, I felt..
Especially, as the tool-programs feel very clumsy to use after using GEM
interfaces of LHarc, Edge, etc.

:
: : This seems to be a joke for many UN*X/MiNT-gurus here, but Atari OS
: : isn't supposed to be a pain to install & maintain, and neither
: : incompatible with many applications. User-friendliness is the key
: : word here, unless we mean to take the place of MS-DOS in the future..
:
: If you are unwilling to learn some UN*X then don't bother with MiNT. When I
: first started playing with MiNT earlier this year I knew absolutely
: nothing about UN*X/MiNT. Now I use it more than I use GEM.

This is what I'm trying to say with my complaining ;-) ... Very many
people do _not_ want UN*X inside their Atari (otherwise they would have
purchased a SUN, or something like that..). For many people Atari is just
what they want, without those neat but very different UN*X-features some
people appreciate.

Isn't it possible for us to have a system _both_ as user friendly as GEM
is today - and as flexible as MiNT can be..? I hate to see two separate,
partly even incompatible worlds here! Things like long filenames should
definitely become something we users don't have to think about. They should
be a natural part of the system, supported by all programs. As long as we
only play with "nice, interesting, but not very useful for Mr. Average"
MiNT, nothing like this really happens. We only have a bunch of MiNT
freaks telling people how wonderful this system is - and responding to
criticizm: "you don't have to use it, don't complain.." - or: "Program
your own tools, if you're dissatisfied with those you have.."

We can't _all_ be programmers, for Heaven's sake !

There are us who like to write text, draw graphics, make music - instead of fighting GCC! One can't do everything... I would like to program, if I had time and brain for that. But right now I rather use my DTP tools, and wish I had a networking system under my Calamus, capable of long filenames, reliable and easy to use. Oh, it's interesting to try X11, even do something small with GCC. But what I _need_ to do with my Atari is music, Calamus, Papyrus, etc. My system needs to work perfectly with those programs. Needless to say, using MiNT, MiNTnet, MinixFS and Multi-TOS AES, things I mentioned work less than perfectly...

In other platforms you aren't expected to program your own programs, since many alternatives are available. I wouldn't like think of Atari users as a bunch of do-it-yourself hobby programmers who use their machines for playing & experiments, doing "serious" work on other platforms. For serious work, MiNT needs to become a serious system, capable of fulfilling needs of very many different people, also people who have never seen UN*X, or GCC...!

I probably repat myself, but this is a bigger problem some of us may wish to think it is..

Greetings, Merry X-mas, and other Nice Things =) !
Tommi

4203. STE, DMA & HDD corruption

Newsgroup: comp.sys.atari.st
Date: 1995-12-21 00:00:00 UTC
From: mbecroft@iconz.co.nz
Message-ID: <4bco82$p0a@status.gen.nz>
Source record: 154097

I have two STEs which have slowly developed this HDD corruption problem
over the past 3 years or so. Does anyone else have this problem and a fix?
It is not the DMA chip problem of the STE of a few years ago, but does
the DMS become faulty over time? And where is the DMA on the Motherboard?
Please post your ideas.

Can anyone help..

Please respond directly to the E-mail address as I am not a regular Atari user and am researching for someone else.

Thanks for your help.

4205. Falcon Locked DSP fixed!

Newsgroup: comp.sys.atari.st
Date: 1995-12-21 00:00:00 UTC
From: mbecroft@iconz.co.nz
Message-ID: <4bcon3$p0a@status.gen.nz>
Source record: 154099

Others who can't use their Falcon because the DSP has locked itself,
listen to this dubious fix!

It locked after turning off the Falcon when in the middle of the skulls DEMO
Thereafter the Falcon was all but useless even when `called tounlock the
DSP'.

We took out the floppy drive, plugged it back in and it now goes as good
as new! DSP going and Falcon flying!

I would be interested in ideas about why this has all happened?

4206. Falcon stuff

Newsgroup: comp.sys.atari.st
Date: 1995-12-21 00:00:00 UTC
From: azog@gti.gti.net
Message-ID: <4bcpo0$8if@gti.gti.net>
Source record: 154100

After months of searching for a 2.5" -> 3.5" IDE cable, Toad has them in their latest catalogue, for like $20. So I got it, and got my Maxtor 340mb drive working like a champ. Just a word to people who are still running the stock 80mb (or 60mb) drives: the Maxtor (and others) are loads faster than the Connors that came with the Falcons. For under $130, you can get your hands on a 540mb drive; it may be hard to belive, but without any accelerators, there is a noticable increase in performance!

So now my machine is in several peices, because the drive is too big to fit in the Falcon's original case. As well as the fact that I had to use an external power-supply to drive the thing.

I know there are several ready-to-buy products to put the Falcon in a larger case, but I also know that several people here have done the work theirselves. I am looking for some pointers on doing it myself: the style case (perhaps dimensions, etc), what you did for a power supply, and other stuff. I realize that I will have to modify the case for the Falcons external connectors, but that doesn't bother me. I am just looking for the best way to do it, without damaging either my Falcon, or having to buy several cases due to damage there.

I'll worry about the keyboard later! (just an extension cable would do me fine)

Hi there--

Since Supra is no longer in the Atari business I wound up with all our old Atari ST stuff. If you're interested in anything ask me and I'll see if I have it for you. Include a price range you're shopping in (more items or $ in one order encourage me to look faster. :-). Some of the stuff is a little grimy from sitting in the warehouse for a LONG time. My first pass seems to reveal:

ICD DMA->SCSI boards (for building HD's)
External Supra HD's
1040st's (work 100%)
1040st's (work, but keyboards have dead keys)
520st's (power up, but no video)
ST 354 external floppies (dead and alive)
Supra HD controllers
Atari Service parts (shifters, ROMs etc)
Mice (dead and alive)
Spectre carts with ROMs and disks
Magic Sac carts with ROMs
A a whole bunch of weird development stuff.
Mega-file 30 (working)
Lots of those metal Supra HD cases

From: cb092@FreeNet.Carleton.CA
Message-ID: <DJyupn.Htx@freenet.carleton.ca>
Source record: 153904

I'm selling a nice external SCSI hard drive box with a
built in 720 kb floppy drive. The box is Atari gray and
has about the same footprint a standard Atari colour monitor
(it nessles neetly under on of these units). It is about
4" tall.

The case has an internal power supply, fan and two bays.
Bay one holds the hard drive (any standard 3.5" SCSI
unit) It already has a 20 mb hard drive installed in it
(replace it with a bigger unit if you want, but 20 meg goes
a long way with an ST). Bay two is already populated with a
3.5" DS floppy drive, supported by a standard Atari controller
(also installed within the box).

The unit is priced at US$60 with both drives installed. You'll
need a Link or Link II to connect the hard drive to an ST, or a
standard SCSI cable to attach the HDD to your Falcon or
TT (not included). The standard ST/TT floppy cable is included
in the $60 price. Buyer pays shipping.

: Actually, I hate netscape. But that's just me. 'This page has been Netscape
: Enhanced' seems to mean these days 'if you don't have a PC running Windoze
: or a Mac then this page is unreadable'.

That isn't correct. I'm using Netscape with Unix and this version is much
better than the version for Windows (e.g. faster, more stable).

: : Also, a "forward" button, or menu item would be nice. Again, Netscape has
: : both "forward" and back. Sometimes I press back, but didn't really mean
: : to. I could easily select the link again, but it does make it easier...
: I've never seen a forward button on Netscape. Hmm.

Even Netscape 1.x has got a forward button. And Netscape 2.0 has it too.
Look at the top row of buttons. From left to right they are: Back, Forward,
Home, Reload, Images, Open, Print, Find and Stop.

: : Finally, this is two in one: a timeout feature. There's been times that
: : I selected a link, and the host is unreachable, or something happens that
: : I can't connect to it. A 60 second timeout would be nice. Related to this
: : is a "stop" button, or similar. Sometimes people have links to hosts that
: : are down or something, and a stop button is handy. When I press the stop
: : button in Netscape, it seems to continue loading local page.
: A stop button would be good, yes. Netscape never times out, incidentally.
: Other browsers do, but this ability was removed from netscape so that it
: 'would wait the required minutes or hours to go through a queue to some of
: the busier servers.

That isn't correct. If you wait long enough, Netscape also times-out. But
it is a long time-period.

Bye, MarkusS.

P.S. I think Stik and CAB are great. I'm only using Netscape on our worksta-
tions too. (Version 2.0b3)

Date: 1995-12-22 00:00:00 UTC
From: tparrett@slipper60.fast.co.za
Message-ID: <819654320_OASIS_@slipper60.fast.co.za>
Source record: 153910

Reading some of the postings re SMTP and its unpredicability I suggest that users switch to OASIS and link that to the PopMail version of Atari NOS for access to mail and news.
OASIS as supplied comes with SMTP and to get PopMail its necessary to replace the std NOS version with the PopMail version. I found it on the Demon site in the ka9q directory under contributions (or something like that). There is nothing in the way of set up help with the file. If anyone shows interest I'll provide a listing of my STARTUP NOS file which has additional lines to configure the PopMail features. The name of the popMail version of NOS is pop3_nos.zip

Have fun
PS. When I stop reading about all the problems with StiK/Cab then maybe I'll try it but until then I'll stick (no pun) with OASIS. I know its not a WWW browser but it does give full access to ftp so who needs WWW. It is slower anyway !!.

Nope.

The Atari parallel port doesn't implement enough control lines for PC
parallel devices (except printers) - and there are no Atari software
drivers for this type of drive anyway.

:-(

Roland.

(rgivan posting for Thomas)

If I understand it correctly it should be quite easy to make
a EPROM board from a 1024*1 EPROM. Isn't it just a matter of connecting
it to the address lines and data lines of the cartridge port, or do you
have to use four 256*1 EPROM:s?
I remember someone talking about a chip select, but it
could be that the four chips are multiplexed with a 74153? I don't
have the pinouts of the port at the moment so could someone check
to see that I'm not spreading bull.

While I'm at it I suppose that actually programing the EPROM(S) is
simply to take 128kb of programs and burn them in as they are? I'm asking
this because I've never used one to burn in code for the ST before.

Does the software autoboot (AUTO-folder?) or does it require a
patch to the TOS ROMs.

Thomas

4220. Problems connecting HD drive to Mega STe

Newsgroup: comp.sys.atari.st
Date: 1995-12-22 00:00:00 UTC
From: jules@cs.ruu.nl
Message-ID: <4bec7g$aqv@krant.cs.ruu.nl>
Source record: 154019
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi,

I'm experiencing some problems when trying to upgrade my Mega STe4 to a HD floppy drive. I've already done the following:

- installed a Sony MPF-520 HD drive
- replaced the WD1772 disk controller with an AJAX controller chip
- replaced the C301901-001 PAL with a revision -002
- insulated the center post of my Cxxxxxx-001 power supply (somebody told me this was necessary with the revision -001 supplies--it doesn't make any difference if I undo this modification
- flipped DIP switch #7

Unfortunately, I'm still experiencing the following problem:

- reading/writing/formatting DD disks works as it always did.
- reading HD disks sort of works but is terribly slow (at most 500 bytes/sec). The disk doesn't step its motor during this operation; it just appears to be sitting idly.
- writing/formatting HD disks doesn't work at all; the disk steps its motor across the entire disks for a couple of times, then reports failure.

I would be most grateful if anybody would have any suggestions as to what could be wrong and/or what I could do about it. Just in case: the motherboard is dated March 7, 1991.

Thanks in advance,

-- Jules

AFAIR, Supra's software does not automatically check for errors during formatting. SCSI drives will report errors, maybe the Supra software is ignoring them. For modern SCSI drives, I have found that AHDI gives better results than Supra software.

Is there some way you can try the drives on another machine (another Atari or MAC, or a PC with a SCSI adapter). This will confirm the drives are good.

Could this be a parity problem (guessing here!), because Supra's cannot handle parity?

> The Supra utilities didn't come with instructions, I assume that the

You can run it from the desktop also, but you have to install the drive icon manually.

Do you get a drive 'C' icon on the desktop when you boot from floppy?

Supra don't really support Atari's anymore, it might be hard to even get them to answer questions about the host adapters.

Since you have the software, it might be easier to buy a cheap host adapter. There was something called 'The Translator' on sale in the UK for about £40, just a bare bones adapter. There is also the ICD stuff & the 'Top Link II'.

There is a FAQ for hard drives, I suppose it could be on Umich.

Steve gave me no details what-so-ever other than he was amazed
at what they came up with and that it worked.
Their plans for the Hawk have changed often and I did not ask
what the final version will include. The cache, Videofunnel, fast
ram, and a spot for an upgraded DSP seem to still be in the picture.
He reaffirmed Cubase compatibility and a PDS slot (pass through).

Source record: 154022

Hi Tae,

as far as I remember, zero-x does support SCSI-transfer - for the ACSI, I suppose you need an interface same as for connecting SCSI-drives to the Atari.
To my knowledge most (or all?) of the recent samplers are supported. There are a number of demo versions out on the ftp archives, try UMICH or HENSA.

It seems a lot better to me. Two new things I was glad to see; desktop pics and built-in icon management. And it is very fast. All in all though, I prefer to use ease to MagicDesk and Thing. Does anyone know if Thing 1.0 is any good?

Hmmm, how about Crazy Dots 2? The beta test version I got a while ago did not work on CD2 or Matric Coco (which is an 8-bit). Disappointing because it looks like a top program...

While it might be nice to have this, someone would probably have
to be kind of lunatic to start writing a Mac emulator for the
Falcon - the market is nearly nil. There is, however, a working
Mac emulator for the ST and TT lines (Spectre), and it might
be possible to tweak it a bit to make it run on the Falcon.
Unfortunately, Gadgets by Small, the makers of Spectre, do no
longer seem to work on the emulator. Maybe someone could talk them
into selling the source code.

4231. How to? Finished coding -- how to submit WRD+2RTF?

Newsgroup: comp.sys.atari.st
Date: 1995-12-22 00:00:00 UTC
From: js@cs.vu.nl
Message-ID: <js-2212951245040001@js.home.phil.ruu.nl>
Source record: 154030

A couple of years I go, I released a fast hack I wrote called 'WP2RTF', a First Word Plus to RTF converter.

Needless to say, sometimes things went wrong, mainly because I had to reverse engineer the W+ file format on the fly. However, a kind soul sent me the real specification.

So I set myself to recoding the thing, and voila, there it is -- ST binary, and sourcecode that should compile just about anywhere. My question is, where can I put it up for distribution? I tried atari.archive.umich.edu, but that fails -- and on the mirror sites I can't find the atari stuff at all.

On a separate note, before I *really* release it -- would anyone care to try it out (and report to me) as a kind-of final test?

Cheers, JS
ps Please reply by mail to me personally (yes, I set the headers, but you might have a buggy newsreader :-))

Check the Power Supples, particularly the connector on the main
board. Clean them and make sure they are snug. My STe started acting like
that durning the warrenty period and it was the Power Supply going out. Replaced
it and it hasn't bothered since (3 years, 4?).

Yes.

First write down the name and path of the file.
Do not allow any prg to write any thing to the disk\partition you have deleted it from.

Find undelete.ttp (often supplied on free magazine disks or with any Hard Disk utilities and run it). Feed undelete the path as the command line.

I think thats how it goes....if you have diamond edge or st tools (I think) or one of a host of others there are friendlier ways of doing it but this works and is freely available AFAIK.

Good Luck and remember not to write to that drive.

all the seasonal greets

That's exactly the text file that came with mine as well. It really
doesn't *explain* anything. I know there was a STguide hypertext file
with the older version, but I think there are new features in version
6.4 (latest version????) so it really doesn't help much.

It really puzzles me how to get MIME decoding to work (I haven't yet
gotten it to work, so I've had to ask people send me the files again,
Uuencoded or by other means).

I must concede, as much of a die-hard Atari fan I am, they may
have dug themselves into a hole that will be their grave. Years
of poor managment by the Tramiels, broken promises of support, and
just a lack of trust between the consumer and the Sunnyvale-based
company have destroyed Atari, once the ruler of the video game empire.

The solution, however, will be a total restructuring of Atari, and a total
push for the Jaguar. This is the only way to redeem their reputation
and (hopefully) their company.

Unfortunatly, I do not see them doing this. That company is so mis-managed
that I am surprised they have been able to mount the effort to make
any kind of showing at all in the market.

Despite everything I've said, however, there is no-way that Tramiel
is stupid enough to turn his back on 150,000 Jaguar owners. I know
they have laid off a few people, but look at the facts. Would they
have pushed so hard to get their product into the Sears and Radio-Shack
catalogs if they were not even luke-warm serious about staying active
with the Jag. Would they have hired a company to create Jag-Wire for them
or started a magazine for the Jag enthusiast. That costs money, folks,
and for all the Tramiels might be, I don't see them wasting money.

Just a thought,
-Florp

4248. TT-Monitor cabling?

Newsgroup: comp.sys.atari.st
Date: 1995-12-22 00:00:00 UTC
From: gartmann@immunbio.mpg.de
Message-ID: <4bfc9j$dpg@n.ruf.uni-freiburg.de>
Source record: 154047

Hello,

my Atari-TT monitor PTC1426 is out of order. It is completely dark although the green LED is on and from behind I can see the tube glooming. I brought the monitor to a computer shop and they told me they will repair it. But after a while the just said they can't do it because they need some special part (which one they didn't tell me) and this very piece is not available anymore. So I took the monitor back and had a look into it myself. I found a red cable coming out of the "screen-transformator" (I don't know the exact term in English :-( ) hanging around. Where should I fix the other end of this cable? On the little card just fixed at the tube there is no cable connected to "G2" that leads to pin 7 of the tube. What should I fix there? On the main card in the lower right corner there is "G2" twice. One cable leads to the card on the tube but the second one is hanging around. Again, where should it be fixed?

If you have such a monitor I would appreciate it if you could have a look into it.

Regards,
Christoph Gartmann

OK - after a little use, I wonder if anyone could answer these 4 questions:

1) When I do a search (in this case on Lycos) using two keywords, go off to a suggested site, press BACK on deciding it's not what I want, I get a full reload based on a search of the first keyword only. What happened to the second word?

2) Why do I get multibombs on some GIFs which, if I press escape during loading will happily display as part images (interlaced and nmon-interlaced), but which refuse to load as full images, and is this connected in any way to similar crashes I get when downloading other files (eg WWW116.ZIP)? (OK, so that's two questions:-))

3)Why do I sometimes download sites which don't write to the (frankly enormous, but lets not boast about size, eh?) disk cache, even when hotlisted? I discovered this when trying to extract text information to fax onto someone else - the file contained a grand total of 0 bytes, rather than the lovely 21000 I was expecting to find.

4) (I've asked this before but...) Why oh why oh why does the program sometimes stop mid-load in order to send a BIGGGG bit of information back? eg. partway through loading a file, when I can even see the other end trying to send me stuff, my modem starts kicking out info. Given thet I usually average on a good night a cps rate of ~1900, and this lasts in excess of 40 seconds, I reckon I'm uploading 80k+ of info. What is my computer telling the world about me?!? It seems ratehr a lot, whatever it is, and so rude to interrupt someone else as well;-)

Answers on an xmas card please....

Merry times to everyone

Andrew (getting inquisitive after another bottle of wine.....)

Octopus is _easier_ to run than MBBS? Would you need an Atari computer
with multiple modem ports to run Octopus as multi-line, or can you use
an ST with multitasking installed. I use the DC-Port on an ST now, but
that's proprietary for MBBS and 9600+ support is just not there.

It is available under Lattice - but its much better IMHO to build seperate binaries. The overhead with the autodetection code is quite high - and certainly doesn't help those users who *don't* have an FPU.

> SIMMs from when I bought the machine.

Did they? I can't say I've ever seen a 512K SIMM - and a seen a good few dozen SIMMs.

AFAIK 1Mb STEs came with 4 256K SIMMs - *not* 2 512K SIMMs. 520STEs certainly came with 2 256K SIMMs. 1 512K SIMM would not have had enough data bits to supply the full 16bits of the data bus.

Anybody else found 512K SIMMs in their STEs?

:-)

Roland.

Hi all

I am using FizzDizz,
Can anyone tell me in simple terms how to run the program and it automatically dial a number,
Imagine I only have one number in there that I use it for, well rather than boot the program, then go to the autodial then dial the number, is there a way to run the program and thats it, it does it all from eeerm whatever?

Yes I have RTFM, but RTFM does not ensure understanding TFM :)

So simple terms please, rather than "use a script" or see such and such a section, please talk me through the process,

Many thanks in advance :)))))))

From: stosser@neon
Message-ID: <4bflnu$6so@neon.airtime.co.uk>
Source record: 153915

Hi

This posting is NOT designed to cause arguments, offend or have everyone jumping down my throat,but it is a honest question I would like to see debated, I felt this had to be made clear as I know Falcon owners love there machines as much as I love my STe,

Why do Falcon owners and Magazine/Diskzine etc reviewers all moan about software made on STFM's or STe's not working on the Falcon?,

How can a person with a lower spec' machine possibly be expected to take advantage of the obvious supremacy of the Falcon, yes I would love a Falcon myself, and would then use its extra specifications,

But at the moment I and many others cannot even test our software to see if its Falcon compatible,
Yes yes I know, a good programmer should be able to do it, hmmm maybe we arnt all that good, but a program made on a STFM or an STE should not be knocked just because it wont work on a higher spec machine, we arnt all as good as the Starball authors :) and many other exeptions to the rule:)
Yet still my work gets the old "Shame it wont work on the Falcon" or "lows: not Falcon compatable" and many many, "Could not get it to work on the Falcon, not even with backwords" or whatever you use,

Anyone else ?......keep smiling though :))))))

BTW, any Falcon owners making programs for the Atari STFM520 ?

Cheers....!ynoT http://www.airtime.co.uk/users/stosser/

4261. 4 joystick adaptor on parallel port - How?

Newsgroup: comp.sys.atari.st
Date: 1995-12-23 00:00:00 UTC
From: mbecroft@iconz.co.nz
Message-ID: <4bghud$imm@status.gen.nz>
Source record: 153918

I have heard of an adaptor which can easily be constructed, which allows four joysticks to be connected to the parallel port of your computer.

Does anybody have details of how to construct such a unit and/or how to access it from software? Please reply with details, or address to contact.

Thankyou for any help!

-Mario Becroft <mbecroft@iconz.co.nz>

4262. On/Off outputs for ST (like Robokit) - How?

Newsgroup: comp.sys.atari.st
Date: 1995-12-23 00:00:00 UTC
From: mbecroft@iconz.co.nz
Message-ID: <4bgi67$imm@status.gen.nz>
Source record: 153919

I am interested to know if there is any way of controlling some switches (to connect to, for example, a relay) from the Atari TOS computer. I have a Robokit interface, which has 8 digital outputs, but this ties up my Cartidge port. It also is limiting to have only 8 outs.

Is there a simple way of gaining more outputs via the joystick port, serial port, parallel port, or some other port? I have an Atari TT030, if this makes any difference.

Thankyou for any suggestions!

-Mario Becroft <mbecroft@iconz.co.nz>

There is a demo available from SoundPool, item code 600-01. It is also on
CIX and may be available for ftp somewhere.
It supports SCSI connection to some samplers, I think the usual s9000 etc.

Dunno what happens here, I used WWW108 to get hold of WWW116. It
repeatedly crashed in different places during the download. I kept
trying and eventually got it. WWW116 seems to suffer from a similar
fault but seems to do it at the same point during the download which
will be easier for the author to debug I suppose.

WWW116 seems to have a bit of intelligence. Once it has got a
screenful to display, it displays it, even though it hasn't got the
whole page. Perhaps this feature is involved with the GIFs?

>3)Why do I sometimes download sites which don't write to the (frankly

:>http://www.gti.net/azog/

Good to hear that Toad is now selling that cable! If you HAVE the
original 2.5" IDE cable that came with the Falcon it is not too hard
to splice it to standard 3.5" IDE cable and hence to a 3.5" hard
drive. If anyone is poised to do this I'll dig out the wiring chart.

If you DO NOT have the original cable, you will need to locate a
44 pin plug for a 2.5" hard drive with at least a couple inches of
cable attached.* I BELIEVE this is referred to as 'PS2' cable with
44 c., but I never bought any since the minimum purchase is $30.00.
Toad's cable is much easier if you can order from them.

I know of two 3.5" IDE hard drives that will fit directly into the
Falcon without having to remove the power supply. They are the
ST 5850A and the ST51080A which are 850mb and 1080mb respectively.
One of the unique features of these drives is the height: 3/4".
The length: 5" and width: 4" let it fit nicely inside the Falcon
case. These drives are Seagates and are very fast.

The Falcon p/s provides +12v for the fan. If you run the fan off a
small wall-wart p/s you may have enough to satisfy the (modest)
+12v requirement of the 3.5" hard drive. Check the voltage

and current in any event.

* Laptop repair shops might have a spare remnant.

ICD RateHD Prg gave me 11ms on an 850 Decathlon and 8.5ms on a
Micropolis 4110A. You're way ahead on throughput, however, as
I used a stock Falcon - TOS 4.1 using ICD Pro driver.

Good to hear that Toad is now selling that cable! If you HAVE the
original 2.5" IDE cable that came with the Falcon it is not too hard
to splice it to standard 3.5" IDE cable and hence to a 3.5" hard
drive. If anyone is poised to do this I'll dig out the wiring chart.

If you DO NOT have the original cable, you will need to locate a
44 pin plug for a 2.5" hard drive with at least a couple inches of
cable attached.* I BELIEVE this is referred to as 'PS2' cable with
44 c., but I never bought any since the minimum purchase is $30.00.
Toad's cable is much easier if you can order from them.

I know of two 3.5" IDE hard drives that will fit directly into the
Falcon without having to remove the power supply. They are the
ST 5850A and the ST51080A which are 850mb and 1080mb respectively.
One of the unique features of these drives is the height: 3/4".
The length: 5" and width: 4" let it fit nicely inside the Falcon
case. These drives are Seagates and are very fast.

The Falcon p/s provides +12v for the fan. If you run the fan off a
small wall-wart p/s you may have enough to satisfy the (modest)
+12v requirement of the 3.5" hard drive. Check the voltage
and current in any event.

* Laptop repair shops might have a spare remnant.

d> that's proprietary for MBBS and 9600+ support is just not there.

It's my understanding that you need an Atari computer with multiple ports in
order to use Octopus as multiline. AFAIK, there's no support for something
like a DC-Port. But what good is multiple lines without 9600+ support anyway?

If you use Calamus S or SL, then I'd find somebody who owns PC Corel Draw...
Those colour vector graphics look marvellous, and most of them can easily
be exported in colour GEM metafile format. It seems, C.D has some bugs
that now & then corrupt some files converted this way, but generally it
will work out fine!

Merry Christmas !

New Computer???
Is there any chance a new Atari system will come out? If not, MagiCMac seems to be the best way to preserve Atari well in too the 21st century, I use it on my Quadra 660AV and it is FAST and my machine is SLOW in the Mac world, just imagine using it on the 150mhz PowerComputing clone, 512 megs of RAM, Disk Array, 128bit Graphics card, etc, etc.

Digital Video???
I am looking for something to Edit digital video and add some basic effects, I like Premier but it is so SLOW (not to mention cinepak compretion but that is another story all to gether). This would be usefull for color correction on animations and easily cutting and pastings sections in and out in to a final project.

Yes, It has conncetions for a serial mouse, two atari
joysticks and an atari mouse.
>
>Why are there incompatibilities ???

Videomaster Falcon
Screen blaster (the one where a lead goes to the joystick port).
Probably any program/hardware that uses the joystick for an input
output other than joysticks or mouse (mice ?) :).

>
>My PC-keyboard converter from DDD, plugs directly into the keyboard-plug

This sounds the same. The driver is burned into eproms on the card.
It is Chro-Magic's "Gizzmo's" (Ram Gizzmo, Multisync Gizzmo ect..) own
code and not the same as ataris. It works well and the keyboard response
is fast. I guess the developer didn't take into consideration "all" of
the toy us atari users have. It works well for mounting your Atari into
a tower case as the ribbon leads are 18" long. The card size is about
2.5"* 2.5".

If all you want is room for an external drive, there is an
external IDE kit for the Amiga and well as the adapter
cable you purchased. I had seen it in an old Amiga User
magazine add. I think is was about 80.00 U.S. and had an
external cable, case, and powersupply. Fitting a Falcon
in a tower looks cool when its done, but it is a LOT of
work.

MB> (mbecroft@iconz.co.nz) -Keeping Atari Alive in New Zealand-

Brian - I don't know whether this will help or not. The ST previous to this TT is now sitting on my wife's desk. I bought it used about two years ago, and had (and still have) considerable trouble with disk corruption on its Megafile 30. For a long time I believed that the hard drive itself was headed south, but inquiries pointed me to the ZRam 2.5M upgrade. After re-seating chips and tearing hair, we finally determined that at least 5 of the chips on the Zram board were marginal. They flunked the 'freeze test'. As I have not done anything about it, they continue on their merry way, and I use this TT instead. But the ST in question has had, and continues to have, more disk corruption in a short time than this TT gets in months, and the TT is used every day.
I tried to make this message short; here is a shorter version: check out your memory chips. They can cause all sorts of problems.

Greetings, Professor Nielsen.

Guess what? The package arrived! Didn't have some of the stuff I expected, though - did you tell me that you had ldw, for instance? Whatever, I guess that what I see is what I get. Thanks!

I did receive your email about goony drivers and old hippies. I didn't feel a response was necessary; I have seen traffic from Los (gridlock with occasional gunfire) Angeles to the Bien Hoa- (chickens, goats, sampans, and US pickups) -Saigon road. What is surprising is that *anybody* is still alive. :)

I saw a post in csas today - 'wanted to buy - TT'. It was from Canada. He could have saved both of us a lot of trouble with Vance, Darren, and the other 998 clowns if he had spoken up earlier. OTOH, I still love the box, and am damn glad I have it.

The package came with all kinds of official-looking rubber stamps on it. I guess we're still paying for the circus.

Merry Christmas to you and yours.

S> asking price.

Al Petersen is the North American distributer. His BBS number is
1-718-833-0828. I believe it sells for $90. A little expensive, but well
worth it. It's powerful, yet easy to use, and runs in both a TOS or a GEM
environment. In the GEM environment a certain amount of multitasking can be
done even when using a singleTOS.

U > Thanks for any help

Sure thing, unless you have written more files to the same disk, and maybe even then. *Do not* do any more writing to this disk until you try the following: Undelete.ttp (available with the Knife ST package, and maybe elsewhere) or ST Tools (shareware). I find ST Tools very easy to use for undeleting files, but undelete.ttp is useable, too. There are other undeleters, I think, but I have used these two successfully.

C > source code.

Dave Small may respond directly, so this may be extraneous.
According to him, the source code is his, not Gadgets by Small's,
and he says he is still working on it. He probably expects to get
the Spectre to work on the Falcon sooner or later, but last I heard,
it is the Mac System 7.x that is causing the grief.

4289. Time for full Internet?

Newsgroup: comp.sys.atari.st
Date: 1995-12-24 00:00:00 UTC
From: Guido Caliandro <clna18l1@bologna.nettuno.it>
Message-ID: <Pine.HPP.3.90.951224025102.27279A@bologna.nettuno.it>
Source record: 153946

Hi,
I'm afraid these are very annoying questions fore more of you, but
please help me!!

I'm into the net from February 1995.
My provider gives both full internet (slip/ppp including pc/mac
clients) and host connection (terminal emulation with unix clients)

My decision has been for the host connection, and CoNnect is my
terminal emulator on my FALCON and my ST-BOOK.
The browsers that are installed in my provider's system and that I
use are:

- lynx (www - ftp)
- telnet
- ftp
- pine (mail - news)
- finger
- talk
- write (similar to talk)

Now I have to subscribe to my provider for next year, and CAB made a
bit of confusion in my mind:
I used it with in a slip account of a friend of mine and it works
great!!

and here's my problem:

In full internet, how can I get in all the resources that I have
with my host connection?

I'm not so expert to install different operative system.

- Please could someone gives me a list of the necessary files for
having all those resources?

- Is PPP really faster and better than SLIP?

- What about Linux? Is there a simply way to install it?

Thanks for your reply and merry Christmas!

Guido Caliandro <clna18l1@bo.nettuno.it>

P.S. Please cc your reply to my e-mail address: I didn't find any
off line reader in pine format!!

HSModem doesn't fix _everything_ :)

Try typing:

AT&F&C1&D2&Q5&K3&W

Into the modem. Then set the comms program to 19200 Baud, RTS/CTS
(Hardware) flow control.

Make sure you _do_ have HSModem or some serial fix installed of course :)

If this doesn't work, find someone local to have a look at it for you!

I doubt it, that's exactly what they are. TOS 1.4 instead of 1.2 or
older. Blitter chip, more memory, and better casing. The actual working
of the machine wasn't much different. (IIRC It was only the Mega-STE
that had the quicker processor in it!?)

Basically, it was what the STFM _should_ have been!

: Thanks on advance

This was almost certainly sent to you by someone using Eudora. This has become a real problem for me. And I have found out from my System Administrator that it is a problem for people all over our campus, no matter what hardware they are using. Apparently Eudora for some platforms works differently than Eudora for other paltforms on this point, plus it depends how individual users have configured them. Anyway, for us the problem is even more serious as there is no Eudora for TOS. I wish I new exactly what the encoding scheme was, how it differs between Mac and Windows, etc. Actually, I wish the makers of Eudora hadn't chosen this apparently non-standard encoding scheme to use for INTERNET e-mail! Can you have the person who sent you the file re-send it UUEncoded? This would be easily un-encoded on your TOS machine, even using ESS Code.

Dig it...

I bought a Mega 4 STe w/TOS 2.06 a while ago. Nice system.
Unfortunatly, I bought it without manuals. I opened the RAM compart-
ment, and there was a HD power cord there. I called Toad...

The guy at Toad told me that the power cord was just fluff.
"Mega STe's were not sold with HD's." I believed him.

I later read that some TOS 2.06 Megas *were* sold with HDs.

Question:

Can I slap a SCSI in there? Is there an onbard controller?
If so, where's the interface? Can I use any SCSI? Someone give me
all the poop here...

Guido Caliandro (clna18l1@bologna.nettuno.it) wrote:

: Hi,

HiHi! :)

: I'm afraid these are very annoying questions fore more of you, but
: please help me!!

Well, I can TRY... Don't expect too much..;)

: I'm into the net from February 1995.
: My provider gives both full internet (slip/ppp including pc/mac
: clients) and host connection (terminal emulation with unix clients)

: My decision has been for the host connection, and CoNnect is my
: terminal emulator on my FALCON and my ST-BOOK.
: The browsers that are installed in my provider's system and that I
: use are:

: - lynx (www - ftp)
: - telnet
: - ftp
: - pine (mail - news)
: - finger
: - talk
: - write (similar to talk)

: Now I have to subscribe to my provider for next year, and CAB made a
: bit of confusion in my mind:
: I used it with in a slip account of a friend of mine and it works
: great!!

: and here's my problem:

: In full internet, how can I get in all the resources that I have
: with my host connection?

At the moment, the only programs that are available for the STiK
slip-program are Cab and IRC. Meaning, that if you choose to get the
SLIP-connection, you'll only be able to view the WWW-pages or speak a lot
in IRC. Applications like FTP, Telnet etc. are being developed for STiK,
but I have no idea when they are going to get these programs finished...

So, I warmly recommend you to get the "traditional" host connection.
Ofcourse, that's just my stupid opinion, so maybe you should wait and
listen to someone else too..;)

: I'm not so expert to install different operative system.

: - Please could someone gives me a list of the necessary files for
: having all those resources?

Well, as I said, they don't exist yet..:(

: - Is PPP really faster and better than SLIP?

Yes, it is. STiK is supposed to use PPP some day too...

: - What about Linux? Is there a simply way to install it?

If I'm not completely wrong, Linux is an operating system like TOS, DOS, Unix... And probably quite unixish... I can't figure out why you would like to install it on your Falcon, but if you're going to do it, I think you'll have quite a jungle ahead... But I'm shure you'll find someone else who can tell you more about this one..:) (Check out comp.os.linux and groups like that.)

: Thanks for your reply and merry Christmas!

You're welcome! And merry Christmas for you too!

: Guido Caliandro <clna18l1@bo.nettuno.it>

: P.S. Please cc your reply to my e-mail address: I didn't find any
: off line reader in pine format!!

MULTIMEDIA AND THE FALCON 030

How to add audio samples to Apex Media or any other graphic
programs

My fist computer was a 1040ST with one megabyte of RAM. I used Notator from C-Lab for professional scoring of guitar methods and composing. Since 1989 I have owned a collection of Atari computers including: a 520,1040ST, Mega 2 and a Mega 4 which all still work.

I had been aware in the increase of video and graphics quality of home computers 9 specially IBM) and began to think of their possible application in creating multimedia presentations. My ST. MIDI setup was powerful and possible the best (including real time music notation) but high quality graphics was out of the question.

So, when I heard of Atari planning to produce the new Falcon 030 I got excited. According to the brochure, this baby was going to be a true multimedia machine. With great high color graphics and stereo 50 kHz 16 bits Audio the possibilities were endless.

When I got my money saved up and finally got hold of a Falcon 030 with 4 megabytes of RAM and a 80 megabytes hard disk I was to say the least very happy (I got me the Falcon as my birthday present) I had the bird in my hands and was ready to experiment. I wanted to know really how great was this machine from Atari.

being a musician I fist wanted to test the Falcon's sound quality. I recorded some of my classical guitar solos, as well as jazz band recordings I had on DAT. I also recorded very quiet samples and just silence to test for noise and distortion.

I was greatly impressed with the Falcon's audio as it sounded to me as good as the quality of my two Sony 75ES DAT's. I however noticed some distortion that I latter corrected by adding the audio attenuators resistors for the inputs that Atari recommends in page 10 of the SAM manual. (Radio Shack Part # 274-300a 40db attenuators)

I also added L and R IN and OUT phone jacks in order to use professional cables and connectors. Later on , I expanded my system by adding Logic Audio, a Quantum 540 Megabytes SCSI HD, an NEC 74-1 Multispin CD ROM drive and 14 megabytes of RAM.

I had no daub that on the Audio side I had a powerful system costing much less than a MAC or IBM setup.

THE VIDEO SIDE

I began my test of the Falcon's video and animation capabilities by searching for FLC/FLI animations on the Internet I found several animations and demos that started to reveal to me the great power of the this machine. Some of these demos and animations are:

-Are you
-Eko-Eko
-Popeye
mouse.prg

I also got a CD ROM containing true color and 256 colors animations. The best of these CD's is the Animation Festival from Wizardware Multimedia Ltd.

Mouse.prg was a very small animation but very impressive. This demo showed me that the Falcon could handle simultaneous video and audio very well. It was when I got to work with Apex Media (a Christmas present from my girl friend) that I got really excited about doing animation, video capture and editing on my Falcon.

So now I had great audio recording software and great graphics software, the question was how to put the two elements (audio and video) together to do some Multimedia work.

I had about two hours of original music recorded and also many hours of HI8 video. I wanted to use Apex Media to do some video editing including transitions and fades , but the problem was that either Apex media or the Expose digitizer did not support Audio!

I wrote several letters asking if it was possible to put together FLI/FLC sequencing audio. I wrote to computer programers and I was told that the falcon could not handle the high speed data transfer necessary for Audio/Animation. I refused to believe this because I had seen these demos and mouse.prg proved that it was possible.
I experimented with WAV and FLI players and finally after all the work I got results.

SAM COMES TO THE RESCUE

Your Falcon comes with a program called SAM. SAM (System Audio Manager) is a combination of a very simple but powerful PRG. ACC combination that can be used to play small or large samples on your Falcon.

The engineers who designed the Falcon's Audio System are in my opinion true geniuses. After you do some experimentation with SAM you will realize that when it comes to sound (and video) the Falcon does incredible, reliable and fast true multitasking.

The system works so well that it behabes as if the AUDIO/VIDEO functions are independent entities (and maybe they are. As an example you could play a long digital audio track while writing or reading to the hard disk, Loading a program, working within a program. You can even change resolutions and the Audio will keep playing without a glitch!

So, here I am going to show you how to use SAM to play your Digital audio tracks from within Apex Media or any other program. You will be able to play your animated sequences with music, and even change sound tracks with the touch of a key. You will be able to listen to the audio while you draw, download a file from the Internet, or load a large graphic file into Apex Media! IT IS BEAUTIFUL, IT WORKS, YOUR FALCON IS GREAT.

Lets begging by reminding you that SAM loads all the the sample files you are using into RAM when you boot the computer. For this reason and for simplicity it is better to start by just using two or three samples. Later on, you might like to load

several samples, and this depends on how much RAM you have in your computer. You can have as many samples as you like in your SOUNDS folder, but only those you have actually assigned to events or keys will be loaded into memory. I have 14 megabytes of RAM on my Falcon so I have configured SAM to have a 5 or 6 megabytes buffer to load 3 minutes long mono audio tracks.

It is a good idea also to use samples that use the same sample rate. For example, 20Khz 8 bit samples are very good for the Audio/ Video application we are talking about. You will need to configure SAM , and this

After you have recorded your samples in AVR or WAV form. A sample frequency of 20Khz 8 bits is fine for this application. Make sure that they are placed; in the sounds folder you intend to use. You can use the original sounds folder in your HD. partition C or create a new one anywhere you prefer. If you are not using the sounds folder in partition C you need to reconfigure SAM. This is done by opening the SAMFIG.ACC and clicking in EXTRAS and then on CONFIGURE. Size to feat, will size your buffer automatically . (IMG 3)

You can play your samples from within any application by assigning them to any key of your computer keyboard . Once you load the program you want to work with, the sample is played by pressing any key you assigned a sample to. For example, the down arrow key is used in Apex Media to start the animations so I assign a sound track to this key to start the sample in synch with the animation.

To assign a digital sound sample to a key follow these steps:

1-Enhable the SAM.PRG that should be in your AUTO Folder and also the SAMFIG.ACC on the root directory and reboot your computer.
2-Call the SAM Setup ACC and click on Extras. (IMG 1)
3-Select "Define Keys"
4-Select "New key Set" and name the key set. (IMG 2)
5-Press the key you want to assign the sample to (for this example you could use the number 1 key on the numeric pad on the right of the keyboard) and click the mouse button.
6-Now you will see the name of your key set on the "Current Key Sets" window
7-Click OK

NOTE: You can create any number of sets containing one or more keys, but to stay simple just define a set with one key for now.

8-Scroll the System Events Window to find the set you just created and select it. (IMG 1)
9- Assign the Sample by selecting it from the "Sound Assignment window, click OK

SAM may need to reconfigure the memory buffer and you may need to reboot your computer for the samples to be activated. Use the built in Recording feature to record your own new samples.

Please read the instructions on the Atari System Audio Manager manual for more details on using SAM.

Once you EXIT the SAM Setup Acc. you will be able to play the
samples by pressing the keys you assigned the samples to. You can
play this samples from within any program. If northing happens make sure that
the sound buffer is sized correctly and make sure that you rebooted your
computer.

Load Apex Media and load a FLI/FLH animation and press your
sample Key. Surprise! You have got Sound and Video. Your Falcon
is a great machine!

Also you can play another sample on the fly. Try it, works very
smoothly. I have played samples 1 minute long and even changed
resolutions and the sample kept going without a glitch.

If you own the Neodesk Desktop you can do some really neat things using macros.
For example you can Install a FLIC player program as an application and then
define a macro by clicking on the Menu Item Begin Macro . Then double
click a FIIC file to play it, after the animation is over click on END Macro and
assign the Macro to a key. If you assigned a sample to this key, next time
you play the macro using that key both the animation and sample will
play at once.

I hope you find this tips fun and helpful.
Raymond Lohengrin Tue September 5 1995

NOTE: NOW AVAILABLE " FRIENDS" RECORDED ON THE FALCON 030
This is a new album completely recorded on the Atari Falcon 030. It contains over 21
pieces for Spanish and jazz guitar and Spanish guitar and flute. The performers on this
recording are Jorge Chicoy (electric guitar), Chris Walker (flute) and Raymond
Lohengrin (Spanish guitar) All the music in this album have been recorded for the first
time. The music has a "New Age" character with Spanish and jazz influence. To order
please send $9.95 for 60 minutes cassette tape or $19.95 for both an audio tape and a
digital copy on DAT.

Raymond Lohengrin was born in Manhattan and moved to Cuba at an early age.
He studied the guitar at the music conservatory in Habana. He also studied the guitar
with Eli Kassner professor at the University of Toronto, Canada. Raymond Lohengrin has
been teaching the guitar for over 17 years. His works for flute and guitar are published
by L. PIPER Publications. He lives in Gainesville, Florida.

Jorge Chicoy is the leading Cuban jazz guitarist and has performed in Europe with
Joe Pass and Michael Legrand. Chris Walker holds a Masters Degree from the University
of Miami. He played with the American Ballet Orchestra for many years.

To order please send check or money order to:

The SCSI adaptor is plugged into the pins near the FDC. Inquire at BEST
Electronics, if T**d gives you less than satisfactory support.

If you're using digital recording, Falcons or macs are a must, but most of my work is done on an atari st 1 meg, Although I usualy have all continuous data filtered out unless I specifically want it.

They are extremely compact no hastle systems compared to macs or PCs. A hard drive is only really needed for digital sound data.

Also, one of Trevor Horn's main engineers still uses an atari st, and the rest of the list is still huge (more so in europe 'cos we pay about twice as much for our systems).

4310. Where to get what you want: (WWW v1.16 etc.)

Newsgroup: comp.sys.atari.st
Date: 1995-12-24 00:00:00 UTC
From: steve_w@atlantis.actrix.gen.nz
Message-ID: <DK41EM.89I@actrix.gen.nz>
Source record: 153967

For those who don't know, or who haven't bothered to look very hard :)
here is where you can get the WWW v1.16 package, and the latest (?)
english version of the Junior-Office fax package. Both seem to be a
frequent request.

For those without WWW access, FTP to:

ftp.cnam.fr

then look in

pub/Atari/Telecomm/

Junior Office v3.4 (English) can be found at:

http://web.cnam.fr/ftp/pub/Atari/Telecomm/jroff34e.zip

The Atari WWW internet access package (v1.16) can be found at:

http://web.cnam.fr/ftp/pub/Atari/Telecomm/www116.zip

Always look on:

ftp.uni-kl.de (FTP or Gopher)
atari.archive.umich.edu (FTP or Gopher - gopher://gopher.archive.umich.edu)
ftp.cnam.fr (FTP/Gopher/WWW)
micros.hensa.ac.uk (FTP/Gopher/WWW)

for ST stuff, if it's not on one of those four sites, then it's not going
to be simple to find!

Junior office is also on Hensa, but seems to have been taken off-line or
something, as trying to get it results in a less than 1K file.

Atari-Archive is _never_ accessable via FTP that I've found, but is via
Gopher, and is _usually_ pretty quick. All of the 4 sites are pretty
fast, but do have their off days.

XI. THE ART OF ASCII <-> BINARY CONVERSION

XII. CLOSING

THE ART OF ASCII <-> BINARY CONVERSION
ESS-Code is an extremely flexible application; this section of the manual discusses (in detail) each of the four conversion methods supported by ESS-Code, and compares them.

UUEncode/UUDecode

SYNOPSIS -- Speed: Very Fast
Expansion: Poor (25%-30%)
Segmentation: Yes
Reconstruction: Automatic

This method of conversion is one of the first to gain popularity, and is thus one of the most widely accepted/used conversion methods to date. It is supported on every computer platform, and provides reasonably good error checking. It is very fast, but not very efficient. The main advantages of using this conversion method are the speed, the ability to break up the output generated into small segments, and the ability to automatically reconstruct the segmented output. The main (perhaps only) disadvantage of using this conversion method is that it generates output that is 25% (or more) larger than the original binary information.

BTOA-Encode/BTOA-Decode

SYNOPSIS -- Speed: Slow
Expansion: Good (20%-25%)
Segmentation: No
Reconstruction: Manual

While this method of conversion is popular, it is not as widely used/accepted as UUEncode/UUDecode. It is vastly slower than UUEncode/UUDecode, but it generates more compact output. The main advantage of using this conversion method is that it provides slightly better error checking that UUEncode/UUDecode. There are numerous disadvantages, though, such as the lack of automatic segmentation or reconstruction.

SHIP-Encode/SHIP-Decode

SYNOPSIS -- Speed: Average
Expansion: Good (20%-25%)
Segmentation: Yes
Reconstruction: Semi-Automatic

While this conversion method is not as widely accepted/used as any of the other conversion methods, it is used extensively on HP-UNIX platforms. It is faster than BTOA-Encode/BTOA-Decode, and offers a nearly identical expansion rate, but has very light error checking. It can create segmented output, and has semi-automaic reconstruction of

segmented output. There are two variations of this conversion method;
the 'Fast' conversion algorithm is somewhat faster than the default
conversion algorithm, but (oddly) has a nearly identical expansion rate.

MIME-Encode/MIME-Decode

SYNOPSIS -- Speed: Fast
Expansion: Average (20%-30%)
Segmentation: Yes
Reconstruction: Automatic

This conversion method is rapidly becoming more popular than any
other conversion method to date. It is fast, but has a low expansion
rate. This conversion method, like UUEncode/UUDecode, has very good
error checking. It can generate segmented output, and reconstruct that
output with no user intervention. One of the main advantages to using
this conversion method is that it is supported on nearly every computer
platform; UNIX, Macintosh, IBM, Amiga, Atari, and others.

Time | MM.SS.XX | 00.15.11 | 00.58.59 | 00.43.22 | 00.26.52 |

Conclusions

Each of the four conversion methods is acceptable, but your specific situation may indicate which of the four conversion methods is best for you. The average user will probably prefer to use UUEncode/UUDecode, since it is the fastest of the four conversion methods, and offers automatic segmentation and automatic reconstruction of segmented output. People who use UNIX often should probably consider using MIME-Encoding; it is very common on UNIX systems, and is rapidly replacing all other conversion methods. If you are paying for data transfer by the kilobyte, though, SHIP-Encoding is probably the best solution for you. It creates extremely compact output, and offers automatic segmentation and semi-automatic reconstruction of segmented output. The error checking is light, but this is usually not a problem.

NEW FEATURES & BUG FIXES
[ESS-Code 6.0]

NEW FEATURE: ESS-Code now supports MIME-Encoding/MIME-Decoding. The MIME conversion method is rapidly replacing all other conversion methods; it is not as fast as some, but it generates very compact output and is extremely reliable. The MIME conversion method is supported on the UNIX, Amiga, Macintosh, IBM, and Atari computer platforms.

NEW FEATURE: ESS-Code now has an expanded command line interface; the previous command line interface is still present (for use as an installed application). The new method consists of eight possible commands; the commands are not case sensitive, but the commands and arguments must appear in exactly the order shown below:

-uue [source] [destination file]
-uud [source] [destination file]
-btoa [source] [destination file]
-atob [source] [destination file]
-ship [source] [destination path]
-unship [destination file] [source] [source] [...]
-mime [source] [destination file]
-unmime [source] [destination file]

For control over the segment size, use the "SEGSIZE" environment variable. If ESS-Code is called in command line mode, it will set the segment size according to the value in that environment variable.

NEW FEATURE: The entire ESS-Code manual is now available at any time from within ESS-Code (if the ST-Guide accessory is installed). By making the online help external, the overall program size is reduced and the quality of the online help is vastly improved. If you want to move the "ESSCODE.HYP" file out of the ESS-Code directory, you must define the "ESSHELP" environment variable; it should contain the full pathname of "ESSCODE.HYP".

[ESS-Code 6.1]

NEW FEATURE: ESS-Code can now handle MIME-Encode/MIME-Decode requests
from the operating system, or when ESS-Code is called as
an installed application. Valid extensions for a
MIME-Encoded file are ".M", ".MIM", & ".MIME" (case
sensitive).

[ESS-Code 6.2]

BUG FIX: ESS-Code will now work with the Falcon (in any
resolution)!
The solution to this problem was presented by Christian
Grunenberg, the author of EnhancedGEM (the GEM library
that ESS-Code uses).

BUG FIX: ESS-Code will now move files to the proper destination
location if SHIP-Encoding is used.

[ESS-Code 6.3]

NEW FEATURE: At the request of several users, ESS-Code has been
modified
to conform to the emerging standard followed by GEM
archive utilities. If it is executed directly, or
executed by the desktop as an installed applications, the
GEM-Interface will be utilized. If ESS-Code is invoked
as a TOS program (.TTP) or given arguments for the CLI
interface (-uue, -uud, -ship, -unship, -btoa, -atob,
-mime,
or -unmime) then a TOS-Interface will be utilized. The
TOS interface is not as powerful as the GEM-Interface, by
any stretch of the imagination, but it allows ESS-Code to
be called by archive shells where it previously could not
be.

BUG FIX: ESS-Code will no longer explicitly state the path of the
ESSCODE.HYP file -- instead, it will merely pass the name
of the file and allow ST-Guide to locate it. If you do
not
want this to happen, create an environment variabled
called
"ESSHELP" and set it to the complete path of the
ESSCODE.HYP
file.

INTRODUCTION

* * * I M P O R T A N T N O T I C E ! * * *

As a direct result of the growing investment of time and effort
placed into this application, ESS-Code is now a SHAREWARE product.

Users who register ESS-Code will receive a disk with the latest
version of ESS-Code (optimized), and a registered (optimized,

personalized) version of MasterBrowse (which also includes
MasterPrint, AutoDate, ACC-Pad, ShadowTerm II, and a coupon for a
free catalog from Suzy B's Software and a $3 credit toward the
purchase of a disk from the Suzy B's Software collection).
The continued development of ESS-Code depends solely on
user contributions; if no such contributions are received, this
application will not be developed further.

For more information on registration, please read the
"Registration" section of this manual.

* *

This program was designed to allow computer users to exchange
binary files over computer networks that do not support the
transmission of binary data. This can be done by converting the binary
file to an ASCII file, then converting the ASCII file back to its
original binary state after transmission.

There are four popular methods of conversion; UUEncoding,
UUDecoding, MIME-Encoding, MIME-Decoding, BTOA-Encoding, BTOA-Decoding,
SHIP-Encoding, and SHIP-Decoding. Since each of these conversion
methods is an accepted standard, there are a wide variety of
encoding/decoding utilities for every computer platform.

If output size is not an issue, the best conversion method to use
is UUEncoding/UUDecoding. This method is fast, reliable, and allows
large files to be segmented (and re-assembled) automatically.

If output size is an issue, however, the best conversion method to
use is MIME-Encoding/MIME-Decoding. This conversion method is not very
fast, but produces very compact output. It is rapidly replacing
UUEncoding/ UUDecoding as the conversion method of choice, because it
is has all of the power of UUEncoding/UUDecoding and is nearly as
widely supported.

Why should you use ESS-Code instead of one of the many other
utilities currently available?

Here are six good reasons:

1) SPEED - ESS-Code is much faster than other coding programs
that I have tested. In some cases, the difference is as
much as 469%! (Yes, that is correct.)

2) APPEARANCE - ESS-Code uses GEM! This means that you are
given a nicely formatted progress display (which shows the
output file, the input file, the currently active
parameters, the source and destination path, and a
"percentage" meter in both numeric and graphic form that
indicates how much of the current file has been processed.
Since it is a GEM program, you can access your desk
accessories at any time, and set your options using

pull-down menus. ESS-Code uses NON-MODAL window dialogs and alert boxes, so you can use your accessories or applications (or even other ESS-Code dialog boxes) while inside a dialog box! With MultiTOS, all dialog boxes (and alert boxes) can be iconified.

3) FLEXABILITY - ESS-Code supports UUEncoding, UUDecoding, BTOA-Encoding, BTOA-Decoding, SHIP-Encoding, SHIP-Decoding, MIME-Encoding, MIME-Decoding, RAW-Splitting, and RAW-Concatening of files. All of your file conversion needs are handled by one program. Should the need arise, ESS-Code can even execute as a TOS program (with a TOS interface).

4) COMPATIBILITY - While conversion methods have remained roughly the same, the Atari ST has not. ESS-Code has support for the ARGV command line standard that Atari has adopted, as well as support for the default command line standard used by older ST systems.

5) OPTIONS - ESS-Code has more options than any other encoding or decoding program available for the Atari.

6) HELP - Using the ST-Guide HyperText accessory, the entire ESS-Code manual is available at any time from within ESS-Code.

REGISTRATION
OR: Why should I send this person money if I have the program already?

I would like to start this section of the manual by saying I am not going to try to make you feel guilty; I would like to say it, but I will not.

Like many authors of Shareware products, I have come to learn that very few people register Shareware software. I do not know why; I can only guess the reasons. The reasons do not really matter, though, because the end result is always the same. On GEnie, MasterBrowse is regularly downloaded by over 150 users. The numbers are much the same for CompuServe and Delphi, and much higher on the Internet. Only 34 people have registered MasterBrowse, though.

I hope that more people elect to register ESS-Code. There are many incentives to do so, but the largest incentive of all is that there will be no further development of this product unless some registrations are received. I cannot say it any more clearly; I love to write software for this system, but I cannot continue to do it without your support.

Users who register ESS-Code will receive an optimized version of ESS-Code, a registered (and optimized) version of the popular text file viewer MasterBrowse, a series of utilities (AutoDate, ACC-Pad, MasterPrint, ShadowTerm II, and a coupon for a free catalog from Suzy

B's Software.

To register ESS-Code, send $15 (Canadian/US) to:

Michel Forget
12209 Dovercourt Avenue
Edmonton, Alberta
CANADA
T5L 4E1

If you do not live in North America (and you are writing to this address instead of the address for users in the United Kingdom), please send an international money order or the equivalent of $15 in your own currency. Please do not send a personal cheque unless you live in North America.

If you live in the United Kingdom, you can send 14 UKPounds (cheque or money order) to Denesh Bhabuta:

ESS (c/o Denesh Bhabuta)
203 Parr Lane
Unsworth
Bury
Lancashire
BL9 8JW

INSTALLING & USING ESS-CODE
ESS-Code is a very versatile application, so there are several ways that it can be invoked:

1) The simplest way to use ESS-Code is to execute ESSCODE.PRG and then select the options you would like to use and initiate an encoding or decoding operation.

2) If you have a hard disk, you may want to install ESSCODE.PRG an an application. For best results, please ensure that the current directory is set to "top window". Since TOS 1.2 does not handle installed applications correctly, it may be neccessary to edit the DESKTOP.INF file (add the full pathname of ESS-Code to the line containing the filename ESSCODE.PRG).

3) ESS-Code can also be installed on the desktop as an icon; this allows an entire group of files to be processed in a single pass. Simply drag the desired files to the ESS-Code icon and release the mouse button. ESS-Code will automatically decide which files should be encoded and which files should be decoded. Depending on your preferences, ESS-Code will also decide which conversion method to use or ask which conversion method should be used.

4) ESS-Code can easily be invoked from a command line interpreter. Commands are not case-sensitive, but must be in the correct order and contain the correct number of arguments. If ESS-Code

is invoked this way, it will use a TOS interface, which conforms
to the emerging standard among GEM archiver utilities.

The following commands are available:

-uue source destination_file
-uud source destination_file
-btoa source destination_file
-atob source destination_file
-ship source destination_file
-unship destination_file source [source] [...]
-mime source destination_file
-unmime source destination_file

This method of invoking ESS-Code is not reliable when used with
segmented input/output.

OPTIONS
CONTENTS

A. Confirm Termination
B. Confirm Overwrites
C. Progress Displays
D. Unix Line Termination
E. TOS 1.4 File Selector
F. AutoSave Options
G. Use Fast SHIP Encoding
I. Include Paths
J. Specify Segments
K. Select Target
L. Default Conversion Method
M. Segmentation

Confirm Termination
This option determines whether or not ESS-Code will ask for
confirmation before terminating.

Confirm Overwrites
This option determines how ESS-Code will behave if an existing file
will be overwritten by an encoding or decoding operation; if it is
enabled, you will be given the option of aborting the operation.

Progress Displays
This option determines whether or not ESS-Code will show progress
displays. Other than saving screen space, there is no real advantage
to turning progress displays off.

Unix Line Termination
This option will force ESS-Code to terminate ASCII lines with a
linefeed (Unix) instead of a linefeed/carriage return (IBM/Atari).

TOS 1.4 File Selector
If this option is enabled, ESS-Code will display prompts in the

file selector.

AutoSave Options
If this option is activated, ESS-Code will save your options when you exit the program.

Use Fast SHIP Encoding
If this option is enabled, ESS-Code will use an alternate (faster but less efficient) conversion method during SHIP-Encoding operations.

Include Paths
If this option is used, ESS-Code will include the complete path of the source file in the encoded data. Thus, when decoding, the file will be written to the same path. This option should usually not be used, since it is unlikely that the system that will receive the file will have the same directory structure as your system.

Specify Segments
This option (when selected) causes ESS-Code to prompt the user for the name and location (using the file selector) of each piece of the file to be UUDecoded. This option will mainly be of interest to users of Hermes UUCP or UPoint, who will no longer have to copy messages out of their news directory, and then waste time renaming the segments.

Select Target
This option allows you to choose the destination path for any encoding/decoding operation. This option is mainly for floppy users who want to decode to a ramdisk or a second floppy disk and CLI users (who must specify a destination on the command line).

For those who want the file selector to always show the same path (which is very useful for those who always select the same target), the environment variable "ESS_DPATH" can be defined. It is a "\" terminated pathname.

Default Conversion Method
This option determines which conversion method ESS-Code will use when processing a group of files (such as when the user selects "Process Batch" or when ESS-Code is passed files on the command line).

Segmentation
An encoded file can be divided into pieces, which will be automatically joined together when being decoded. This makes it easier for network mailing software to process the encoded file. You can choose one of the preset sizes, or set your own. (Unless you are sure it will work, you should not use segment sizes larger than 50K).

The segment size can also be set with the environment variable "SEGSIZE" (which contains the maximum number of kilobytes for a segment).

ACKNOWLEDGEMENTS
There are many people who are deserving of recognition for their

aid in creating this application:

First, I would like to thank Steve Yelvington, the author of
UUCODER 1.0 (the program on which ESS-Code was based).

Another person deserving of recognition is Christian Grunenberg,
the author of the excellent EnhancedGEM Library which is the core of
ESS-Code. Christian is also responsible for the solving of the
Falcon problems; his observations were absolutely correct, and solved
the problems completely when I was almost ready to give up.

I would also like to thank Ofir Gal, Traci J. Ingram, Gerhard
Hoelscher, Carsten Friehe, the users of the MausNet, the users of the
Internet, Mark Adler, Steve Wells, Michael Mies, John G. Myers, and RSA
Data Security Incorporated. In addition, I would like to thank the fine
people of the GEM-List, who have contributed greatly to my understanding
of the way the operating system works.

DISCLAIMER
ESS-Code does not come with any warranty, express or implied. If
you use ESS-Code, you do so at your own risk. Neither the author of
ESS-Code (Michel Forget) nor any other party will accept responsability
for any equipment damage, data loss, or other unforseen consequence of
the use or mis-use of ESS-Code.

DISTRIBUTION
There are two limitations placed on the distribution of ESS-Code:

1) When distributed, ESS-Code must contain all files found in the
original archive.

2) ESS-Code may not be distributed on the cover disk of any
magazine without the express written permission of the author.
This limitation does not apply to electronic (or non-profit)
magazines.

CONTACTING THE AUTHOR
If you would like to contact me with bug reports, suggestions, or
comments, you can do so through the following addresses (in order of
personal preference):

Internet: mforget@elfhaven.ersys.edmonton.ab.ca
mforget@worldgate.edmonton.ab.ca

Mail: Michel Forget
12209 Dovercourt Avenue
Edmonton, Alberta
CANADA
T5L 4E1

CLOSING
I hope that you are pleased with ESS-Code, and decide to continue
using it after you have experimented with it.

I have invested more than a year of my life in the creation of this program, though, so I _also_ hope that you will seriously consider sending in the requested donation.

If the Atari is going to remain a viable system in the future, it needs more Shareware, Donation-Ware, Freeware, and Public Domain applications to compensate for the lack of commercial products available. In order to make programming for the Atari viable, though, the Atari community needs to show support for the programmers of these applications.

-Michel Forget
Electric Storm Software

SUZY B'S SOFTWARE INFORMATION
Suzy B's Software: "A Honey of a Deal"

Suzy B's Software
3712 Military Road
Niagara Falls, N.Y. 14305
U.S.A.

Phone: 716-298-1986
716-297-8514

Suzy B's Software is buzzing onto the scene of the Public Domain and Shareware supply services with a difference. Supplying single-sided or double-sided disks as requested, we will fill the disks with compressed self-extracting files (compatible with all TOS versions).

That in itself gives you a good deal, but Suzy B's Software goes on to give you what the owner, Susan Burkley, calls "a honey of a deal." She asks, "How many times have you wanted a utility and a game from a P.D. service but had to buy two disks to get them both? At Suzy B's we put your individual selections on a single disk so you can pick and choose and get more of what you want. Do you want a game, a children's program, a picture file or two, the most recent version of ST Writer, and a NASA press release? You can have them all on one disk! All our files are compressed in a self-extracting format to give you even more of what you want. Right now we have about 8,000 files from which to choose -- our catalog is about 950 pages long -- 2.75 Megabytes of ASCII text, and it keeps growing! It's a lot more work for us, but you get a honey of a deal!"

MasterBrowse
MasterBrowse Summary

If you register ESS-Code, you will receive the FULL, REGISTERED, OPTIMZED version of MasterBrowse!

Everyone who owns a computer has, at one time or another, needed to view the contents of a text file. The text file viewer supplied

with Atari computers will allow you to do this, but it is lacking in many respects.

MasterBrowse is a replacement text file viewer for any Atari computer, in any resolution except low (though this restriction is not enforced). It offers many features that the Atari text file viewer does not:

o MasterBrowse has a friendly, easy-to-use, 100% GEM automated installation program.

o MasterBrowse has an extremely fast GEM user interface which makes use of raster copy screen updates, GDOS/SpeedoGDOS fonts, pull-down menus, windows, windowed dialog boxes with keyboard shortcuts and extended editing, colour, round radio buttons, checkboxes, context sensitive online help, and more.

o MasterBrowse works with MultiTOS, MultiGEM, Mag!X, and Geneva. With MultiTOS or Geneva, MasterBrowse can ensure that only one copy of MasterBrowse is in memory at a time. If another copy of MasterBrowse is launched, the copy of MasterBrowse already in memory will be instructed to display the files. The utility that makes this possible (the "client-program") can be configured to call an alternate viewer for special types of files, such as pictures or sound files.

MasterBrowse also understands the MultiTOS Drag & Drop Protocol.

With Mag!X, MasterBrowse can communicate with the desktop to ensure that only one copy of MasterBrowse is in memory at a time, as with Geneva and MultiTOS.

o MasterBrowse can use the command line to open documents (or to open a document batch). The ARGV, xArg, and standard command line formats are supported.

o MasterBrowse supports the View Protocol, by Peter Seitz, which allows other programs to instruct MasterBrowse to display a file instead of using their own default viewers. Currently, the following programs support the View Protocol: STZip, Lharc Shell, ShowImage, GemView, and DiskList.

o MasterBrowse allows you to have a virtually unlimited number of documents open at the same time, restricted only by the number of available windows and the amount of free memory.

o MasterBrowse provides keyboard shortcuts for every menu entry.

o MasterBrowse allows you to change the entire keyboard configuration; every key MasterBrowse uses can be changed!

o MasterBrowse provides you with a Quick Document Access feature found in no other program. With this feature, you can instantly load any of the last seven files that have been opened (in case

you need a document again after closing it).

o MasterBrowse allows you to (optionally) save your configuration automatically when you exit the program, or even save a document batch that will automatically be loaded the next time you use MasterBrowse.

o MasterBrowse allows you to use all of your familiar movement keys. You can use the arrow keys, the application keypad, or even the space bar and the return key.

o MasterBrowse allows you to move in any direction inside a document, as you would expect. What you might not expect is that you can tell MasterBrowse how far it should move when the movement keys are pressed. How about moving two lines down instead of one? Or perhaps three lines suits you better?

Do you still want more power? Keep reading.

-You can jump to a specific line, a specific page, the start of a block, the end of a block, or any of ten personal "bookmarks" that MasterBrowse supplies for each text window.

o MasterBrowse allows you to move through a document (by lines or pages) using a special Quick Scroll Mode. It uses the shift, control, and alternate keys so that the scrolling speed is not limited by the key repeat rate.

o MasterBrowse offers unparalled power when it comes to searching! In addition to the ability to search for up to three strings at the same time, starting at the top of the document or at the current position within the document, MasterBrowse allows the use of Unix (TM) regular expression matching (wildcards). A search may be conducted in reverse mode or forward mode. If you desire, you can specify which of the three search strings will be case sensitive and which will not.

o MasterBrowse also has powerful block operations. You can mark a block and then save it to disk, print it, or write it to the clipboard. You can control how the block is marked on the screen. MasterBrowse can also be configured to remove the block markers after a block operation is completed or to leave the markers unchanged. Blocks are marked using the -MOUSE-, exactly as they are marked with text editors. More? A block can even be extracted from a larger document and placed inside a MasterBrowse window with a single keypress! In addition, MasterBrowse can append blocks (or entire documents) to already existing files.

o MasterBrowse is a master printer. It can print a document (or a block) with page headings, page numbers, line numbers, a description of the file or block, a synopsis, or any combination of the five. MasterBrowse can even print an identification string for those people who share a printer between more than

one computer. You can also save a block or an entire document to disk (or the clipboard), with all of the same options available. MasterBrowse can even be configured to use the special features of your printer, such as bolding, italics, underlining, colour, and specialized fonts. You want even more power? MasterBrowse can print on both sides of the printer page, and indent your text.

o MasterBrowse gives you complete control over your windows. You can cycle through them, change their titles, shrink them, close one, close them all, or get information about them all using the keyboard (or the mouse). MasterBrowse also allows you to remove the vertical window scroll bar, the horizontal window scroll bar, or both scroll bars (since a window that has no scroll bars can scroll more than twice as fast as a window that does have scroll bars). In addition, each MasterBrowse window can have different scroll bar settings. The size of a window can be changed by clicking in the bottom right-hand corner of the window, even if the window does not have a "sizer" gadget.

o MasterBrowse supports batch files! If you use a certain group of documents often, just load them up and tell MasterBrowse to create a batch file. One double-click on the batch file, and they will all be loaded again.

o MasterBrowse saves the positions of the first seven windows (if you want it to), so you have complete control over where your documents appear and how your screen looks.

o MasterBrowse allows you to load and save bookmark lists.

o Every window has a set of block markers and a set of ten bookmarks to itself.

o MasterBrowse also has support for the clipboard! A block can be written to the clipboard (with or without formatting) or the clipboard can be read into a MasterBrowse window.

The features listed above -barely- scratch the surface of MasterBrowse!

MasterPrint
MasterPrint Summary

MasterPrint is a program created from the fabric of MasterBrowse; it offers all of the printing power of MasterBrowse, without the excess overhead of a text file viewer. This program can interface seamlessly with MultiTOS, and can work in the background with any multitasking operating system.

AutoDate
AutoDate Summary

AutoDate is an AUTO folder program that can effortlessly keep
track of the date. The only thing you, the user, are required to do is
hold down your shift key once a day while booting your system. You
will never have the wrong system date again!

ShadowTerm II
ShadowTerm II Summary

ShadowTerm II is a full-featured terminal program, styled after the
very popular terminal program Interlink.

ACC-Pad
ACC-Pad Summary

ACC-Pad is a full-featured desk accessory notepad; it was extracted
from ShadowTerm II, one of the first applications I wrote.

> Mega-STE that had the quicker processor in it!?)

Only the MSTE has the 16Mhz CPU. Original MSTs had TOS 1.02 also. TOS 1.4
didn't come along untill later. For that matter - early MSTs didn't even
have the blitter chip fitted!

The MST was and is a nicely repackaged STFM. Worth having - but not really
comparable to the MSTE IMHO.

:-)

Roland.

> were not sold with HD's." I believed him.

MSTEs were sold both with and without hard drives. If the HD compatment on the righthand side of the case has an LED like the power one - that MSTE has the mounting bracket for a HD. Otherwise its the type that never had a MSTE fitted.

You used to be able to buy kits to upgrade this compartment to a HD one. Gastiener had a single one at the recent Atari shows in the UK. This is just a new plastic compartment lid and some brackets.

On top of this - you need a host adaptor (maybe one in the kit - but otherwise something like the ICD Link2) - and of course a HD mechanism.

So ..

> Can I slap a SCSI in there?

Not without a host adaptor.

> Is there an onbard controller? If so,

Maybe - but unlikely unless somebody has just stripped the disk out.

> where's the interface? Can I use any SCSI? Someone give me all the
> poop here...

Any SCSI 1 or SCSI 2 which doesn't require bus arbitration. For genuine Atari host adaptors you need a drive which can have parity disabled on. 3rd party interfaces vary in this respect.

All IMHO and AFAIK,

:-)

Roland.

Hello!

I had the same problems with Binhex and ATARI. After a long search I found a Programm for Atari called Binhex 1.0. But this doesn't work together with Binhex 4.0.
Therefore we chose a software wghich works without problems between the three platforms IBM-PC, ATARI and MAC. This is the software uuencode/decode.
If you use Eudora it is important that you have this beginning line:

Description:

BEGIN-------cut here-------CUT HERE-------PART 01

Otherwise Eudora don't recognize the uuencoded file.

I searched a long time for Binhex 4.0 (ATARI Version) and I can say that this version doesn't exist.

You can help yourself with Binhex 4.0 for IBM-PC. The exchange between Mac and IBM-PC works without any problems. Afterwards you can load the file in the ATARI.

Or use UUENCODE/DECODE.

If you are interested I can send you UUENCODED the Binhex1.0 for ATARI. But, how I wrote before, it doesn't work together with Version 4.0. But perhaps youi find someone who is able to update this old 1.0 Version. If you find someone, I will be very interested to get this new version.

Shall I send you Binhex 1.0 for ATARI?

Gerd

BinHex is something very common on the Macintosh platform. I have a C-source
to decode BinHex and I have simple TTP on my TT to do it.

4319. Drivers for HP DJ 600..850..?

Newsgroup: comp.sys.atari.st
Date: 1995-12-25 00:00:00 UTC
From: thietavu@news.abo.fi
Message-ID: <4bn98c$dut@josie.abo.fi>
Source record: 153976

I just purchased HP DeskJet 660 Color; a fine printer, but it seems HP intends to turn its customers into PC users =(...

The printer itself is a bit plastic-looking, but otherwise well made. The main problem is this: (for us Atari users)

In their infinite Wisdom, HP has decided not to make the printer configurable _at all_ outside the Windows/Dos environment...

Yes, you cannot turn on the draft mode, choose different fonts, or virtually anything from the printer itself. The old printer drivers for DJ 550C, etc. do work pretty well, but some important functions are simply not available for us. One of these is the alignment of b&w and color cartridges, only available in Windows/Dos drivers.

This all leaves me pretty mixed feelings... The printer itself is great, but its value for Atari users is questionable. I can't accept HP's product policy - and the fact they don't even provide the necessary PCL codes in their manuals, or even in their customer service (I tried today - no help for newer DeskJet models available).

What shall we do? It seems, most new printers will be integrated into Windows-environment. More and more... Until one day other computer users won't be able to use these printers at all.

The only good news is this: we can still use HP printers, and even get nice results from them by using LaserJet 4 and DJ 550C drivers. But the bad news is that we can't align the ink cartridges, use any economy- or draft mode, use any special paper types (which need some special driver support), ...

Can't say I'm happy. Feels like that damn PC-world is slowly putting a rope around my neck: there's no way out. It's Windows and Bill Gates, or nothing. That's the way printer suppliers want it to be - easier for them, I guess.. Harder for us others.

Now, what we _really_ need, is a good driver program for DeskJet 600 and 850 series, preferably somehow integrated into NVDI. Can someone make one - or will all we have be emulations of older HP printers..?

Tommi

: In full internet, how can I get in all the resources that I have
: with my host connection?

For ALL the applications that you want....you'd have to go for PC or MAC
at this point in time. STIK/CAB dont have ALL the client programs that
you need.

You would have to use CAB for your browser, and then log in to your SHELL
and run all the other stuff, which means you need some rudimentary knowledge
of the UNIX O/S.

: - Is PPP really faster and better than SLIP?

It is supposed to be more stable.

: - What about Linux? Is there a simply way to install it?

Yep, buy the CDROM (Atari Version) and then you can run the X-WINDOWS
version of Netscape. Mind you, you will still need a pretty thorough
working knowledge of UNIX to configure it all and a LARGE Hard Drive!

4324. FS: Falcon 030, ST Capable Multisync Monitor, ST Books!

Newsgroup: comp.sys.atari.st
Date: 1995-12-25 00:00:00 UTC
From: kendall@rmii.com
Message-ID: <4c75o1$oil@natasha.rmii.com>
Source record: 153981

For Sale:

Falcon030 4/80 and software! - $500
14" Princeton Ultra 1400 Multisync monitor (w/ST cable) - $200
ST programming books, see below and make me an offer I can't refuse.

Or buy both computer AND monitor for $600!

All prices include S/H (except the books unless sold with something
else...)

Falcon 030 details:

Hardware Includes:
16MZ 68030 (sorry, not 32MHz)
4MB RAM (standard)
80 MB internal HD (standard)
Screenblaster hardware/software
Atari RGB color monitor adapter
VGA montor adapter
Unused RAM Gizmo with docs, original box, original styrofoam peanuts!
All original docs/software - some original disks, but not quite all.
Unopened case
Lightly used

Software, docs and original disks:
Productivity
Straight Fax 2.0.
Registered Connect, best terminal program ever made.
Registered Superboot 8.0 (nothing extra, but hey!)
Old Photo Show program for Kodak Photo-CD's
Diamond Edge hard disk repair software
Atari Works (came with computer)

Games (ST games, most work on Falcon)
Falcon flight simulator, with mission disks counterstrike & firefight
Battletech
Powermonger
Oids
Microprose Civilization (runs with compatability programs on Falcon)

This machine was used for about a year, thn I had to get another machine
for work related stuff (one guess what kind). Sadly, I no longer use it,
and could use the money. Hopefully it will go to a good home, and someone
else can squeeze a few more years of valuable service out of it.

Monitor details:

Princeton Ultra 1400 Multisync montior - first used on my STE for high
and low resolutions, this montitor is about 2-4 years old, again with
light use (no use at all in the last year). It worked very well for my
STE, and went up to something like 800x600 on my Falcon. I'll even throw
in the Monitor Master box that allows you to hook up an ST to the monitor,
and switch between high & low res (not on the fly!)

Books:
The Atari Compedium, still has registration card.
Atari ST Applications Programming (Bantam)

Abacus:
GEM Programmers Reference
Atari ST Internals
Atari ST Machine Language
Compute:
ST Applications guide - programming in C
Tech. Ref Guide, vol. 1 - VDI
Tech. Ref Guide, vol. 2 - AES
Learning C programming graphics on the Amiga and Atari ST
Compute's second book of Atari ST.

I'd rather like to sell the books as a set, but if there's one you're
just dying for (the compendium), feel free to ask!

In general, I'd like to sell all of the computer stuff togenter, but if you
are interested in any one piece just ask me and I'll consider it.

Happy New Year to everybody!

>that calls the Naval observatory, gets the real time, and
>synchronizes the system clock? Any ideas? E-mail me at
>bdc2@po.cwru.edu

The program you're looking for is on the Suzy B's CD if nowhere else. If there's no one around you who has the CD, I could UUE the file to you. But isn't this just the excuse you've been looking for to get a generic CD and a copy of ExtenDOS? (grin). Seriously, you can get a slow (1X or 2X) CD drive for under $100 now - I got a 3X for $200. Of course you need a SCSI adaptor, but those can be had cheaply as well. With the lack of local support, having a few Atari specific CD's can do wonders for your shareware collection! ;)

4327. >>>>> DECODERS ETC. FOR PC, ST & AMIGA!

>but i dont know how this is done.

Eeeerm ho, I see <?>

>Is it such a big effort to hit F2 and then F5 after the program has
>loaded?

No!, But then again its not such a big effort to do a lot of
things, but it is boring to do it half a dozen times every day of
every week of every year,
To double click on FizzDizz and it loads, runs, dials my
provider, then the script kicks in and it goes straight to the e-
mail and downloads it, then logs off, well that would be nice?

O,K, Lazy to the extreme I know, but ever heard the saying "Why
have a Dog and Bark Yourself?"

Nice speaking to you John after seeing your name many times, hope
you had a merry Christmas and are going to have an even merrier
new year :))

Cheers....!ynoT http://www.airtime.co.uk/users/stosser/

4333. COMPLETE ST system for sale

Newsgroup: comp.sys.atari.st
Date: 1995-12-26 00:00:00 UTC
From: sanskrit@tx.technion.ac.il
Message-ID: <DK7J46.3z8@discus.technion.ac.il>
Source record: 153990

Hello,

I have the following items for sale, I prefer to sell
most of these items as one package. I haven't thought
about price yet, and although I live in New York, I
won't be back there until March, but I figured I'd
get the ball rolling now.

Just let me know if your interested, and give me a
fair price, I will then see what my other responses
are and get back to you.

MEGA ST 4
SLM-804 LASER
MEGAFILE 20
MEGAFILE 30
2 ATARI MONOCHROME MONITORS
1 COLOR MONITOR

The system is in Excellant Condition, it looks
NEW and was used mostly to type papers in
while I was in college 3 years ago. I have
2 megafiles and 2 montiors because I used
to have a mega2 machine as well, which I
sold. The Laser printer will need a new
drum and toner, since the drum is worn and
I never used more than 2 toner packs.
I also have quite a bit of software, but it's
been sitting in boxes for sometime, and I don't
recall most of the titles.

Please let me know.
Pradeep

Yes, that would be the way to design a "new" Falcon, but I would guess
that they used some of Atari's custom chips, ie, Combel, DMA, ect..
Mabey that is why they are trying to deal with Atari (if any of it
is true).

I have the demo of Phoenix 2.0 running on my Quadra. It
renders very fast with a 50mhz DiiMo installed. The demo
of Chronos 3D will not work (mabey a newer version?).
If NEON is configured to run under MagicC Mac, that would
be heaven. Apex probably would not run much faster. I find that
the DSP in the Falcon is hard to beat when utilized by a
program such as Apex. There is MPEG fever for the Ataris, but
I have not tried it on MagicC Mac. That would enable you to
create MPG's using pictures rendered in Phoenix. There is an
030 version, and the source is supplied. You can recompile
with LatticeC 5.60 and Devpac 3 as each can handle the 040
for futher optimize the speed.
Using HowFast, I don't see the Mac
SCSI outperforming the Falcon by very much, if at all.
I think that Tommi has proven the IDE can be very fast in the
Falcon.

I know what you mean about Premier and Photoshop.
They look great on paper and in add's but they are VERY slow
even on a 50mhz 040 (under the Mac OS). I honestly thought
that something was wrong with my machine :).

If there are some projects in the works for MagicC Mac (graphics,
sound, ect...), to my knowledge, they have not been announced or

released.

Mike

These are graphic files for use with Spectrum512, a program that
gave 512 colors on a ST low rez. screen, looked great, but I don't know
of anything that will handle them on an IBM PC type system! There was a
program that turned them into GIF's, but it also only ran on an atari ST,
STe, Not even sure if it ran on a TT or Falcon!

Vern, To get the menus and stuff to read in English just trash
cab.rsc, then open the rsc folder and copy the cab_e.rsc to the directory
that you just trashed the cab.rsc out of and rename it to cab.rsc! That's
why they have a rsc folder in the disribution package! They have a
French, German and Enlish version in there!

4340. Another use for WWW116

Newsgroup: comp.sys.atari.st
Date: 1995-12-26 00:00:00 UTC
From: aa860@ccn.cs.dal.ca
Message-ID: <4bp1ru$hdn@ra.isisnet.com>
Source record: 153997

Not having a slip connection, or likely to get one in the near fiture, I still find WWW116 a great program for checking my HTML files before uploading them to CKDU-FM's website. My Internet server is a text only browser, a colleague of mine has previously added the colour etc using her IBM and netscape for the benefit of those out there with fancy equipment.

Now it occurs to me that CAB all by itself is a potential multimedia program for the Atari! I've used a couple - Hyperlink, Hype, St-Guide and the Hypergem from ST-Format. CAB has the promise by using HTML of being cross platform compatible which is very interesting and gives a few more years solid use out of the Atari. Does anyone else have experience doing multimedia on ST/E's using any of these programs? Any comments would be appreciated. I would also add that each of the programs I mentioned did some aspects well but had certain limitations, cross platform compatability being a big one!

4342. Re: Are Ataris good for midi music?

Newsgroup: comp.sys.atari.st
Date: 1995-12-27 00:00:00 UTC
From: gregor@shelly.goldengate.net
Message-ID: <c1b7cb$11834.155@goldengate>
Source record: 153854

The Atari ST as a midi machine? Way behind the "curve" but still the best. Try
to make a mac or pc do the same for a similar price. In order to make a pc or mac do what this old mega does, I would have to spend the price I paid for this machine on hardware, not to mention software!
I had to disappoint my old man over Xmas. He's giving me his loaded Zeos 486 with all the frills and thrills.
"I've gotta figure out what I'm do with the machine and where I can fit it into my set-up...It's so BIG..."
"Well, you can throw away your atari now that you got a real computer!"
"This Mega has a few more midi years left. I can't throw away an old friend. BTW...Where do I plug in the midi cables...Com 1,2.3, or 4?"
"err...well...err...you'll have to buy an interface...."
"Sorry, dad, the machine doesn't replace my mega...with my xmas bonus, I'll buy the cards etc to make it an add on to my midi system....How big is the hard drive?"
Atari has always been the most user friendly midi machine.

Hallvard Tangeraas (hallvart@sn.no) wrote:

: In article <4b9ff0$b41@osiris.wu-wien.ac.at>
: Whats the difference between the 68882 and 68881 ??? Sysinfo suggests
: that the FPU fitted is an SFP004 or compatible (something I'd never
: come across until you mentioned it).

I have tried CAB (not online though) and it works fine. I think the source of your problem may be the wrong FPU; the 68882 is the succesor of the 68881, twice as fast and pincompatible, bit it seems that it is not 100% software compatible with the 68881). Try to get hold of the 68881, it very cheap DM 40, when I bought it).

SFP 004 is just the name Atari gave to its 68881 card; Atari used a different method for this FPU to be used with the ST (called I/O mapping); Motorola, however, had a different way using Line F calls (don't get me fixed on this, but this is how I understood it from arecent discussion in Mausnet); from the 68020 onwrads, this is done automatically, the 68000 needs a driver for this (probably the "Line F emulator does exatly this); remember however, that most (all?) compilers do know only the combinations 68020 + Line F FPU (68882), or 68000 + SFP 004 (i.e. 68881)
So you shopuld get yourself the other FPU.

Regards,

Alfred

Thomas Neuburger (thomasn@best.com) wrote:

: Despite everything I've said, however, there is no-way that Tramiel
: is stupid enough to turn his back on 150,000 Jaguar owners. I know
: they have laid off a few people, but look at the facts. Would they
: have pushed so hard to get their product into the Sears and Radio-Shack
: catalogs if they were not even luke-warm serious about staying active
: with the Jag. Would they have hired a company to create Jag-Wire for them
: or started a magazine for the Jag enthusiast. That costs money, folks,
: and for all the Tramiels might be, I don't see them wasting money.

There were probably 2 to 3 million ATARI TOS computers sold , in some
parts of the world their market share was 95% in the music
market. Germany, for example, was by far the largest and most important
Atari market (for ALL products!!!) with avery well known brand name and
an established distribution net, with lots of support from third party
developers.
And they dropped the computer line and they dropped Geramyn as a market.
Do you really belive that those 150000 Jags will make them decide
differently?
Remember, the Jag is now the only produvt, Atari is doing money with, till
they may complete and establish themselves in the PC games market. And
then just wait for the Jaguar support.

Regards,

Alfred

I have two monitors for sale.

1 Atari SC1435, color, stereo monitor. It's in excellent condition. Supports ST Low and ST Medium resolutions. $250.

1 NEC 3D. This monitor works very well as a 5-in-1 solution for ST Low, ST Medium, ST High, TT Low, and TT Medium. I used this on my TT and it can also be used on the Falcon. In excellent condition. $250.

I'll pay shipping, but I'm more interested in selling locally in the San Francisco Bay Area.

Let me know if you're interested via e-mail.

Thanks!!

Ed Krimen

4351. AdSCSI Plus for sale

Newsgroup: comp.sys.atari.st
Date: 1995-12-27 00:00:00 UTC
From: azog@gti.gti.net
Message-ID: <4bt1ts$hgo@gti.gti.net>
Source record: 153863

I've got an AdSCSI+ sitting around that I don't need anymore. In case you're unfamiliar with this: it's a host adapter that allows you to use SCSI drives on any ST computer. The "plus" part of it is also a battery-backed real-time clock. Basically you plug the SCSI 50 pin flat cable into the host adapter, and then plug the 15-pin cable into the Hard Drive port of your ST, and you're off. Includes manual and disks and hopefully cable.

Since I haven't used this in a very long time (since I got my Falcon in 1993), I am offering this with a money-back warrenty. The deal is this: send me a check, and I'll send you the unit. I'll give you a week to play with it. If after two weeks goes by, and I don't hear from you (via e-mail), I'll take that as you're being happy. If you're not happy with it, send me e-mail, and I'll either rip up the check or return it, your choice.

The price is negotiable. These sell for $99.00 new in the latest Toad catalogue, so best offer over $50 get it. Or if you've anything to trade (SVGA cards for a PC, Falcon compatable games, Jag games, or whatever).

Yes, there is an update - I bought it at TOAD and it works fine. With
the update you can also merge IMG files into A4 format.

4356. Touch-Up/Migraph hand scanner

Newsgroup: comp.sys.atari.st
Date: 1995-12-27 00:00:00 UTC
From: steve_w@atlantis.actrix.gen.nz
Message-ID: <DK8H9p.8F3@actrix.gen.nz>
Source record: 153999

I got myself a migraph hand scanner the other day, and although it seems to work okay, (not wide enough to scan a page usefully, but what can I expect for about $80 - brand new). Anyway, as always, it's nice to have the latest version of the software. The one that comes with it is copyrighted 1992, and is version 1.84.

Is there a later version of this software (Touch-Up) for my 4meg STe?

The main manual is copyright 1990, but the v1.8 update manual gets as recent as 1994. Hmmm, I just found the registration card stuck at the bottom of the packet the disks were in, does Migraph still exist? If not, and if there _is_ a new version of the software, is there any kind soul willing to send me a copy? If they are still around, I'll try asking them! :)

Thanks - and merry christmas to all, and happy new year! I hope no-one gave you a PC for christmas, I'll pity you, I've got to work with the horrible things all day :(

Windows-95 - Just say NO!

>
With STiK you're stuck ;-) that's right. However, a WWW browser should
also support things like ftp, telnet, and so on. In the case of CAB this
is CAB.OVL's task, a module still to be supplemented.

>
> : I'm not so expert to install different operative system.
>
> : - Please could someone gives me a list of the necessary files for
> : having all those resources?
>
> Well, as I said, they don't exist yet..:(

Well, that's plainly not true. It just involves a fair bit of work to
install MiNT (easy) to have a few Unix extentions and put MiNTNet on top
of it (a bit tricky) in order to have a fully Internet qualified
maschine. You'll have ftp, mail, telnet, even nfs.
Of course, this is commandline based (although you can run it in a
window), but you should be used to it from your terminal connection.
However, there isn't yet any graphical web browser, but some people are
working on a CAB-Interface (CAB.OVL) for MiNTNet.
In my opinion this is a real alternative, because it implements much more
functionality, but you might be afraid of the installation hassle.

> : - Is PPP really faster and better than SLIP?
>
> Yes, it is. STiK is supposed to use PPP some day too...
>
MiNTNet already supports PPP.

Throw away the CAB.RSC from the main directory, and dig in the RSC directory for the english resource file. There are three files in the latest release (WWW116.zip) named something like CAB_G.RSC, CAB_E.RSC, CAB_F.RSC, for G)erman, E)nglish and F)rench, or similar. Copy it into the main directory and rename it (remove the trailing, language indicating letter).

Hello!

Are you a PC, Atari ST or Amiga user looking for a uu-, xx- or base-64
-decoder or a GIF- or JP(E)G viewer?

Or are you new to the net and need a WWW-browser or some de-archivers?

Check out my home page:

http://www.sci.fi/~jysky

I've collected the absolute necessities into nice little packets. You'll
find a *GREAT* uu-, xx- and base-64 decoder for PC and Atari ST,
uu-decoder for Amiga, GIF- and JP(E)G viewers, WWW-browsers etc..!

All the programs are free- or shareware and 100% complete packages!

Check it out!

>: you have visited a site, should there?
>
>: Is there a remedy for this?

There is a remeedy because I used it but unfortunately I'm not sure what it is
as I tried lots of stuff. Some of the tings I tried are:
1, Make an empty 0000001 file in your cache folder,
2, Change your cache folder to another path,
3, Delete your CAB Cache log file (cache.cab) if there is one,
4, Do the lot of above and then flush your cache and reboot.

If any of this works then please tell me and sorry if it doesn't!

If it really is software only - then its going to run painfully slow on even a Falcon. Internet stuff might work - but you can forget about any of the new fancy Multimedia stuff. Even with a decent 486 based PC - some of this stuff struggles. Most new PC software really requires a Pentium, 16Mb RAM and a large fast HD.

:-(

Source record: 153872

Hello Atarians,

I am in need of a copy of Tentrax for my flatmate who is an Atari owner/user. He had a copy of it (legal, of course), but being more of a musician than a computer boffin, he accidentally formatted the original disk. Now he has all his music data files but cannot load/edit/save them anymore.

He is quite a talented musician and perhaps bound for commercial success, so a quick response would be appreciated.

Alternatively, the web/email/snail mail address of the people that made Tentrax would suffice.

Alternatively, is there some public domain conversion program that will translate the Tentrax data files to a standard midi format ? This would even suffice.

Thankyou in advance,
Craig

Hi there,
Hope you all had a good X-mas. And I wish you a great atari filled 1996!
I am looking for a cd-rom filled with Atari-ST/STE/TT software. All my
old disks are fading and I am frantically copying them on new disks but
this is a costly and time consuming job. Isn't there a cd-rom outthere
with atari software/shareware?
Greetz,

: best. Try: to make a mac or pc do the same for a similar price.
~^

Indeed! For the price of a 1040ST w/ monitor you can buy a midi interface
for the MAC or IBM (computer not included).

There is a lot of good quality PD and Shareware software for the machine,
readily available over the net (although I wish it was all ZIPped because
Lynx doesn't seem to want to download LZH files as binaries).

And since so much of the great software for the machine is now
discontinued, you can get one-eyed copies of this software without
feeling guilty (not to mention free).

~^
: I had to disappoint my old man over Xmas. He's giving me his loaded Zeos

: "I've gotta figure out what I'm do with the machine and where I can fit
: it into my set-up...It's so BIG..."
~^

Well you can always use it for games. That's what my PC is used for. The
PC platform makes one heck of a nice (but expensive) game machine. For
midi I still use my old 1040ST.

Sure, I've got no hard drive, sure it's only 8MHz, sure it's got only 1
meg. But as weenie as that sounds when it comes to midi it runs circles
around my PC.

There is no way you can match the ST in the price:performance ratio,
especially for midi.

I had Falcon Speed, at 286 emu. It did run Windows 3.1.
Microsloth Word BARELY would fill the screen. However
File Maker Pro worked very well as did other DOS and
non Microsloth products, ie, Grapher, ect.
Cons were limited hard disk partitions, no CD Rom
and software that bangs the hardware directly won't work,
al-la Netscape and Winsock.

Hi Steve

You will have to be careful though as I have a Golden Image hand scanner
that came bundled with V1.84 of Touch Up, the problem is that V2.51 does
not work with it very well.

You should use the *latest* version of JPEGD.PRG, which is dated Dec 25 1994!
There was a buggy version out there dated some days ago, which had this
color artifact bug. The current version is OK!

The version date (or number) of JPEGD.PRG is shown at startup, so please
check this out.

I don't actually know where you can get the current version (it is free,
of course), but registered user's of 1stGuide, of which I am the author,
will get it automatically on the master disk from me.
(Have a look at http://quest.jpl.nasa.gov/PNG/pngapvw.html)

I've never heard of any other scanner being bundled with Touch-Up other
than Migraph's own scanner. TouchUp, AFAIK, was done primarily to support
the Migraph scanner; I don't know how well it supports other hand scanners.

There are quite a few CD-ROMs that are filled with Atari software. One
of the best is the 2-CD collection from Suzy B's Software. Send a
message to "greg@delphi.com" for their latest catalog/newsletter. Greg
Kopchak heads up It's All Relative.

You did use the -vdi (or better -vdq, if it works) switch, I hope.
Without that switch MGIFv5 will not use the VDI at all and will fail
miserably on anything other than (relatively) standard Atari graphics hw.
(I normally do direct screen access.)

Both -vdi and -vdq work perfectly on my PowerMac at work under the demo
version of MagicMac. Unfortunately, I don't know anyone with an ordinary
graphics card, so I can't try it out for myself. Since the VDI code
definitely works with one 'card', it would be surprising it it didn't on
another, though (IMO).

If anyone has any problems with this (using the -vdi switch), please get
in touch with me by email.

They are Uncompressed Spectrum 512, Spectrum Extended & Spectrum Compressed pictures respectively and quite simply this format was specifically coded to display more than the normal number of ST colours on screen at once and I would very much doubt that they can be used on the PC.

Hi,
I can help. I have 3 Atari CD's from England and I would be delighted to
let you borrow or use my 3 CD's :- Transmission (Falcon mostly), Gemini and
the Whiteline Gamma PD CD's. You can also buy your own from England. I can
give you addresses if you like. I should also be getting my CD Writer back
from a friend in February. Anyone else who wishes to access these CD's and
lives within easy distance of the Hague can copy any of the PD from these CD's
if they want.

4394. Fun SCSI problem

Newsgroup: comp.sys.atari.st
Date: 1995-12-28 00:00:00 UTC
From: dhbutler@stat.mps.ohio-state.edu
Message-ID: <4bv76n$da4@osustat.mps.ohio-state.edu>
Source record: 153896

OK, maybe "Fun" is not the best choice of words... Maybe "extremely frustrating" would be better... Yes, much better I think.

I have a Falcon (C-Labs, 14mb), and external SCSI drive, and an external RENO SCSI cdrom drive. I just received my ExtenDOS driver from TOAD a couple of days back. However, whenever I attatch the RENO (Media Vision) drive to the chain my Falcon refuses to boot. Not only that, but each time it does this it completely BLOWS AWAY my drive C! I have to reconstruct the partition with the ICD utilities and (sometimes) restore some of my files from a ZIP drive backup! Normally I would suspect a SCSI ID conflict or something similar. However, I have already eliminated Termination, Cables, or SCSI ID conflicts from being possible causes. All cables work fine when connected to other devices. Only the last device is terminated, and the SCSI ID#'s are all set correctly. About the only thing I have not done is hook it all up in a different physical order. But I've gone through this so many times now that I'm paranoid to even hook it up again. Maybe the drive itself has gone bad?

Help!

Thanks,

-David Butler

> Does anyone else find that the MagiC vt52 window causes problems? It
> seems to cause a crash after exit very often.
> Is there another program I can use which runs TTP and TOS in a window?

I found only one problem which is responsible for crashing and it was
when the Bconstat (CONSOLE); command is used heavy in a loop in
combination with Bconin (CONSOLE);

A long time ago i've reported it to ASH but they say that i have to
check my source code... so i don't use Bconstat (CONSOLE) when i'm
running under Mag!C in VT52.

VT52 does crash after programm exit when Bconstat is used heavy and
when the user did enter approx 20-30 lines of text using the keyboard
with Bconin (CONSOLE). It looks really strange but i compared a few
old source codes they did work without problems and the difference
was Bconstat...

The simulair GEMDOS functions seems to have the same problem.

I don't know other good VT52 programm, TOS2GEM isn't good enough to
take the task of it.

Greetings,
Koos

4399. ST Software Sale

Newsgroup: comp.sys.atari.st
Date: 1995-12-28 00:00:00 UTC
From: Terry.May@rebel.genesplicer.org
Message-ID: <743_9512290135@genesplicer.org>
Source record: 153901

I have the following software for sale (all include original disks and manuals):

Atari Works (high density disks) ...$20
CodeHead Utilities 5
CodeKeys macro tool 5
Degas Elite 5
LookIt & PopIt 5
MultiDesk Deluxe 10
MultiTOS 15
PC Ditto 3.0 (software) 10
Spectrum 512 10
STipple Image File Viewer 5
STyle Image Manipulator 5
TV Sports: Football 5

Prices do not include shipping. Prepaid only.

Package deals available upon request.

I need space for new hardware! And $$$'s to upgrade exhisting
hardware! So the unneeded equipment has to go! Not to mention,
I could use the room.... It's getting crowded in here!

F O R S A L E

* 1040STf *

720K Internal Drive
TOS 1.4 ("Rainbow TOS")
2.5mb RAM (Upgradable to 4mb)
Z-Keys
IBM (External) Keyboard included!
Tweety Board!! (For "Stereo" sound)
Original Box
Power cable
Z-Keys Documentation
Great Condition!!
NOTE: This computer has the nicest, CLEANEST upgrades to it that I
have ever seen. And I've seen a many!
Asking $250 + shipping

* Futures Systems 3.5" floppy drive model GTS-100 *

External double sided drive
Power Supply
Full black case
Good Condition
LED display
These types of drives work exellently!!
Asking $75 + Shipping

** OR ** OR ** OR ** OR ** OR ** OR ** OR ** OR ** OR ** OR ** OR **

$300 for the package, and you pay shipping ... Plus I'll throw in
at your discretion (for FREE!) :

* Magazines *

(10) Current Notes Magazines

* Chips *

PAL chip. Came out of the Mega Ste, still works! (Replaced it, even
thought I didn't need to. Didn't know that at the time. So I have a spare
here) And this one will support the high density drive!
Number is: C301901-002.

Floppy Drive Controller Chip. Still works! Just upgraded to the AJAX chip, so I don't need this one! The number is: WD1772-PH

Tos 2.05. Works great. Just upgraded the Mega STe to TOS 2.06! TOS 2.05 will work in any STe!

* Joysticks *

(6) Misc Joysticks

F O R S A L E

P L U G N' P L A Y
H A R D D R I V E S E T U P !

50mb Seagate hard drive
44mb Syquest removable hard drive with (see below)
(5) 44mb Syquest carts
AdSCSI Plus host adapter
DMA cable and software
Case, fan, and power supply

All Fully cabled and ready to go! It's a Plug N' Play situation!

The Seagate and/or Syquest can easily be replaced with a larger drive.
Power switches on back and front for convience.

I cannot swear to it, but from the looks of it, a manual, and how
nicely it was all put together, I would say this setup was put together
by TOAD Computers.

Asking Price: $300 + Shipping

: Is there a later version of this software (Touch-Up) for my 4meg STe?

HI there Steve!
I run a migraph hand scanner with Touch Up 2.51.
It works fine
We have used it in the Club Magazine which you receive!
And TOAD advertise upgrades to it in their catalogue (not sure on the
very latest)
Check it out on their WWW page perhaps?
Hope this helps.

Hello,

The three Whiteline CD's (alpha, gamma & delta) are very useful. They
are cramned with shareware. Some of those shareware prog are even
licenced. Apart from those progs you'll also find a huge number of
Calamus fonts, true type fonts and Signum fonts.
You can find those cd-roms, and others, at
Comex sales agency
Morettistraat 30
6291 XL Vaals
The Netherlands
Tel: 043-3066475
Fax: 043-3062151

or at

4404. 14.4 Modem on ST - How?

Newsgroup: comp.sys.atari.st
Date: 1995-12-29 00:00:00 UTC
From: mbecroft@iconz.co.nz
Message-ID: <4bvcv1$qnq@status.gen.nz>
Source record: 153811

We are upgrading our BBS which runs on a 4meg STE to a 14k4 Modem. However, it won't work and we need help. The BBS previously used a 2400BPS Modem. The 14k4 modem works fine on the TT030.

The modem will respond to keypresses, and seems to dial and connect perfectly. Once online, however, the modem does not seem to recieve any characters. Pressing a key causes the "SD" light to come on, but even when the remote computer should be sending characters, the "RD" light remains off.

We have tried HSModem, but this only prevented the modem from responding at all.

The same problems occured with RTS/CTS flow control on or off.

Any help very much appreciated.

4405. HELP! with my TT

Newsgroup: comp.sys.atari.st
Date: 1995-12-29 00:00:00 UTC
From: smiller@farad.elee.calpoly.edu
Message-ID: <4bvm70$11j@isnews.csc.calpoly.edu>
Source record: 153812

I just got a new TT and I am running into major troubles, so if anyone can help with the following I would appreciate it.

#1 my new TT (as opposed to my old, nicely running TT) has TOS 3.06 2megs of ST ram and 16megs TT ram (atari board)

I am attempting to put my setup on my old TT onto my new one and several problems have arisen:

A: XBOOT will no longer work, it just gives me a bunch of bombs

B: WARP9 will not work on the new machine

C: StudioPhoto loads and then jumps back to the desktop

D: I don't know what my NOVA board will and will not work with (I needs Yat's email address)

If you can help with any of the above I would GREATLY APPRECIATE it :)

thanks

Unfortunately not. I would grap a _good_ book on TOS harddisk formats,
and a good disk editor, and look whats gone wrong. Be very careful if you
never used a disk editor before. I guess it'd be a rather time consuming
task even for experts.

Of course, as there is no physical distinction between drives c and f, if
both are on the same hard disk unit.

Cheers Peter

I have just successfully completed the Atari World mod to my serial port
and......it WORKS :-)

I don't have a comms program that supports a port speed of 38,400 :-(

What can I use?

Thanks, Julian.

4408. FS: Atari stuff cheap

Newsgroup: comp.sys.atari.st
Date: 1995-12-29 00:00:00 UTC
From: NEKU72A@prodigy.com
Message-ID: <4c021i$baq@usenetp1.news.prodigy.com>
Source record: 153815

I'm selling the following Atari items. POSTAGE IS EXTRA. In a lot of cases the postage will probably exceed the cost of any hardware purchased.

IMPORTANT - Everything is sold "as is". Any known defects are listed.

ATARI HARDWARE - All hardware items include all of the neccesary items needed to hook it up (Cables, power packs, etc.) unless otherwise noted.

ATARI 130XE Computer $15
ATARI 1027 printer $5 defective - 1st 40 columns print normal 2nd 40 columns are scrambled.
ATARI 1020 Color Printer $10 - missing manual, needs new color pens. You may still be able to get the pens from Radio Shack as their color printer uses the same pens.
ATARI 400 with 32K no power pack or accessories. $3
It should still work, but there is no way for me to test it.
ATARI 800XL defective $3
Has power pack, but is missing other accesories. Screen turns green when it is turned on.
ATARI 800XL defective $4
Same as above, but it has all the accesories.
ATARI 810 Disk Drive defective $10
Drive doesn't work. It spins but doesn't read.
ATARI 520ST defective $20
Computer boots up, but can't communicate with the disk drive. I don't know if the problem is with the drive or the electronics in between. Also, missing power pack.

MPP-1150 Parallel Printer Interface $5
Connects Atari 400, 800, 600XL & 800 XL to a parallel printer using the 36-pin Centronics standard. It also worked with my 130XE.

ATARI ST SOFTWARE - All software includes the original packaging and runs on the 520ST.
$4 each or $3 each if you buy 7 or more.

Dungeon Master
Dungeon Master Chaos Strikes Back
Time Bandit
Shadowgate
Bard's Tale 1
Arctic Fox
Paladin
Day of the Viper
BoulderDash Construction Kit
Moebius

Night Hunter
Bubble Ghost
Shanghai
Puffy's Saga
Populous
Bloodwych
Questron II
Demon's Winter
Phantasie III: THe Wrath of Nikademus
AD&D Hillsfar
AD&D Heroes of the Lance

GFA BASIC 3.0 $5

PUBLIC DOMAIN ST SOFTWARE - Approximately 30 disks of PD software, mostly from Bre Software and Accusoft. $10 for all

MAGAZINES: 50c each
ST LOG
1988 May Jun Jul Aug Sep Oct Nov Dec
1989 Jan Feb Mar Apr May Jun Jul Aug Sep
ANALOG - Each issue includes a 32(?)-page ST LOG pullout magazine.
1986 Apr May Jun Jul Aug Sep Oct Nov Dec
START
1989 Sep Dec
1990 Mar Apr May Jun Dec
1991 Jan Feb Apr
ATARI INTERFACE Aug 1990, Feb, Mar, Jul 1991
ATARI EXPLORER Jul 1992
ST X-PRESS Oct 1989
ST FORMAT (British) Nov 1993

ATARI 8-Bit software - $10 for all of the following.
Ballblazer, Lords of Conquest, Gauntlet, Micro League Baseball, Galaxian cartridge (no box or manual)

I find it _very_ stable. Have a look at your settings under MagiC 2.0.
If you have Ease also, switch off the Ease VT52 switches.

Btw, are you trying to run NOS in a window, or is this happening to
lots of other programs as well?

>
Sometimes its hard to figure out what is meant. Lets get to the point :
STiK doesn't do any connects, it just provides the means for it (the
TCP/IP stack). The connection is handled by CAB.OVL. The same holds for

> cab begins reading a page
>
CAB doesn't read any page from internet, in fact, CAB doesn't even know
how to talk to STiK. This again is done by CAB.OVL. The sequence is :

1. The user types in an URL (or selects one from an already read page).
2. CAB calls CAB.OVL and passes the URL as parameter.
3. CAB.OVL disassembles the URL, decides which host to connect to and
initiates the connection by calling STiK with proper IP adress and
port number.
4. When connected CAB.OVL requests the document by sending the appropriate
command, using STiK.
5. The document comes in via STiK, and is saved into a cache file by
CAB.OVL (filename has been supplied by CAB).
6. The connection is closed by CAB.OVL and control is transfered back to
CAB, which reads the file from the cache folder.

During the whole procedure of fetching a WWW page the only thing CAB
itself does is displaying the corresponding status message ("Connecting
to ...", "Read Data XXXX/YYYY Bytes", ...), being told to do so again by
CAB.OVL.

So please lets separate things that should not be mixed. I very often
hear people complaining about errors and blaming CAB although CAB
obviously cannot be blamed ('cos it's simply not involved).

> same problem on WWW116 as well.
>
Obviously, since STiK and CAB.OVL have not been changed in this release.

Thank you for explanation.

Then the problem must be that CAB.OVL doesn't write the right thing to the
cache folder, but why?????

Yours /SN

Is there any Digital video I could use, I am running MagiCMac on a Quadra 660AV? What formats are there? Is there a basic Quick Flix like editor?

4414. Re: Time for full Internet?

Newsgroup: comp.sys.atari.st
Date: 1995-12-29 00:00:00 UTC
From: tparrett@slipper60.fast.co.za
Message-ID: <820253684_OASIS_@slipper60.fast.co.za>
Source record: 153821

In reply to the query from Guido Caliandro (clna1811@bo.nettuno.it)

Why not try OASIS. It provides email (send and receive),Newsgroups, and full ftp access. The programme in its curent version (1.35e) uses ATARI NOS. In order to use popMail as required by some service providers one needs to dump the normal ATARI NOS programme and replace that with the PopMail version of NOS. This is available on the Demon site. The file name is pop3_nos.zip.
I've been using this for three months and the set up is quite reliable.
It did take me a while to get going as most of the help files that come with the OASIS package are related to Demon and I found the configuration a little difficult. I believe that we can look forwards to a version of OASIS that includes WWW access in the not too distant future. In the meantime why not use what is available. By the way OASIS runs under slip and ppp.

Have fun
Ted Parrett

4419. GEM for PC Gold Pack - Rare, Unopened and Cheap! - Two Copies Left

Newsgroup: comp.sys.atari.st
Date: 1995-12-29 00:00:00 UTC
From: cb092@FreeNet.Carleton.CA
Message-ID: <DKD7II.Awx@freenet.carleton.ca>
Source record: 153826

As some members of USENET readers may know I've done a fair amount of
experimenting with the Atari Desktop's first cousin, GEM for the PC.
This software product (by the same people as wrote GEM for the Atari) makes
a humble DOS machine launch programs, copy files and generally operate
just like an ST.

The big difference is that the PC runs IBM applications not Atari programs.
In other words, instead of clicking on the name or icon for Word Perfect 4.1
for Atari, you do the same deal and launch WP 6.0 for DOS. The new desktop
on your PC looks very similar to that of your ST.

GEM for the PC runs any IBM compatible application what can be run from the
DOS prompt (even those that won't run in Windows or under DOS Shell).
Additionally, it can run special GEM for PC applications which take advantage of
this interface's common font sharing capabilities, desktop accessories, etc.
(like those of the ST).

Recently, I was fortunate enough to have a chance to buy six unopened copies
of this software, dating back to the final release of this software (in 1989).
Four copies have sold, leaving me with two packs left, as of December 27.
Both are unopened and include original licences and original 3 1/2 726K disks.

The package consists of the GEM for PC Desktop software itself (a three disk
set), plus seven native GEM for PC applications, as follows:

GEM Desktop Publisher - a two disk set similar in characteristics to Timeworks
Publishing Partner, but with a lot more zap; at least when run on a 386.

GEM Graph -

GEM Word Chart - Posters, maps, graphs, etc.

GEM Draw Plus - Advanced drawing capabilities

Bitstream Fontware - Same fonts as featured on the ST (Dutch, Swiss, etc.).

Bitstream Fontware Installation Kit for GEM 3, and

GEM Filter Pack PCX to IMG and IMG to PCX - this one runs even on PCs
that don't have GEM Installed. Great for people who want to get new PCX
files, from the IBM, world into their ST.

I got a good deal on this stuff from a friend and am willing to pass the
savings along to any interested USENET readers and "cling-ons". Specifically
I'm selling these unopened Gold Pack sets (11 disk packages) for US$35 each!

If anyone is interested I'll also include a copy of the earlier version of GEM
for the PC which is a dead ringer for the original ST Desktop (but which

displays in lower resolution than GEM for PCs version 3 and which can't run all of the noted GEM-native applications, included in the Gold Pack).

If you've got to use a PC at work or home, you might as well make the most of it. GEM for the PC is a step in the right direction. Once these last two copies are gone, they are gone, so if you are interested, let me know soon.

Thanks

Keith M.

Hi there!

Are you a PC, Atari ST or Amiga (Mac supported soon!) user looking for
a uu-, base-64, mime etc. (de)coder or a good .GIF, .JP(E)G and .AVI
file viewer?

Or are you new to the Net and looking for a WWW-browser or some
(de)archivers?

Or maybe you'd like to get a 1.4 MB list of anonymous FTP-sites?

Check out the Internet Survival Kit at -> http://www.sci.fi/~jysky <- !

You'll find a *great* uu-, xx- and base-64 (de)coder for PC (DOS and MS-
Windows), uu-, mime- etc. (de)coder for Atari ST, uu-decoder for Amiga,
file viewers for many file formats, including .GIF, .JP(E)G & .AVI,
WWW-browsers etc... All the programs are either free- or shareware!

You'll also find about complete list of anonymous FTP-sites with
discriptions of each site. The size of the list is 1.4 MB!

NOTICE: The access to the site may not work until 2. January 1996, because
SciFi is changing its Internet-provider right now. However, after
the break, connections to SciFi should work very well and fast..:)

Right, let me see if I got this right... vt52 crashes under the right (or wrong) conditions. Is there another terminal program which will work? Since MagiC reads the INF file to see which terminal is defined I surmise that an alternative might work (vt0100 would be good for many purposes I suspect). If this is correct, can anyone suggest a good alternative please?

Thanks to Koos and Guy for the thoughts...

4423. Flash - GEM for PCs can be an interface for OS/2 Warp!

Newsgroup: comp.sys.atari.st
Date: 1995-12-29 00:00:00 UTC
From: cb092@FreeNet.Carleton.CA
Message-ID: <DKD8pw.CCo@freenet.carleton.ca>
Source record: 153830

As many USENET readers know, GEM (developed by DRI in the mid
80's) can be used to sit on top of TOS (as it does in the ST environment)
or on top of DOS (using the GEM for PCs product). In either case,
GEM is a graphical user interface which hides the relatively arcane operating
system (be it TOS or DOS) from the user, in normal operations. When GEM
for PCs in installed on a DOS box a PC launches DOS applications the same
way as one lauched GEM applications in the Atari world. File copies, etc.
are also performed in the same way as one would with an ST, Falcon, or TT

The unexpected surprise is that GEM for PCs can also be run on top of
OS/2 WARP. This discovery means that, instead of GEM being constrained
by the inherent limitations of DOS, it can let rip with a 32 bit multitasking/
mutithreaded OS. You can directly address as much RAM as your system
has going for it and you can launch DOS, GEM (for PCs) AND OS/2
applications directly from an ST-like desktop. File copy operations, etc.
are handled just like on an ST (format a 1.44 floppy, read data from your
PCs CD ROM, etc. just like you had a HIGH POWER ST).

Due to OS/2 protected multitasking charateristics, you can also be running
windoze applications at the same time. However, they have to be launched
from the OS/2 workspace shell, not from the GEM desktop. I'm still
experimenting to see how far I can go with this new discovery. I'll
be trying to disable the OS/2 workplace shell next so that the machine boots
straight into the GEM desktop (running on top of command mode OS/2 Warp)
What fun! If anyone else does any work in this area, please let me know
what you come up with. I think there is some real potential here!

Regards,

Keith M.

From: dave@mbha.demon.co.uk
Message-ID: <820271714_OASIS_@mbha.demon.co.uk>
Source record: 153831

Sorry about the last mispost on this subject. Don't know what
happened. The post should have looked like this...

From the fact that MagiC reads the terminal program name from the INF
file, it ought to be possible to use another one. A vt100 possibly?
Does anyone know of a suitable alternative program? I think reverting
back to vt52 version 1.3 crashes fewer times but it is still a bit of
a lemon IMHO. <sigh>. Any thoughts anyone?

From: steve_w@atlantis.actrix.gen.nz
Message-ID: <DKD4xC.Mu0@actrix.gen.nz>
Source record: 153834

Okay, I've got a fair idea what this stuff is worth, but I'm open to offers on it all, so....

Spectre-GCR, Mac-plus emulator with ROMs (needs hard-disk and 2meg of RAM to be practical). Works really well for stuff that works on the older Mac's. (Reads Mac' 800K disks if nothing else! ;) Includes System 6.0.5 installation disks (the proper ones!) as well as various other vital mac utilities.

Happy-Copier cartridge. Will copy any protected disks. Comes with software and copying routines. Won't have to worry about corrupt disks as much!

ICD-Link cable. Will let you plug virtually any standard SCSI drive straight into the back of the ST without any modifications to anything, just plug & go. (Plug a ZIP drive straight in!)

Vidi-ST/Vidi-Chrome digitiser. Real-time video digitizing from camera, video, or TV. In up to 512 colours on an STFM, 4096 on an STe, or 19200+ if you use tricks and the program "Photochrome). Includes Vidi-ST, Vidi-Chrome, the digitizer itself and cable.

STOS - The games creator software, manual plus various tidbits.

Make me offers! Just remember, you'll have to include shipping in the offer amount, which considering most of this stuff is pretty small, won't be too much. (About $5 to the states I'd imagine).

Anyone in New Zealand gets preference :) Try finding Vidi on the open market :)

Email me here if you're interested. Sensible offers only, like I said, I know what it's worth, but won't want as much as it's worth! ;-)

I have a inherited many boxes worth of Atari hardware, software, and manuals. There is far too much software (disks and catridges) to list, but here is the hardware. Make offers. Take a bunch (all?) of it, and I'll give it to you dirt cheap!

E-mail is preferred.

Qty Description
---
1 Atari 1040ST complete system (computer, disk drive, mouse, MONITOR, cables, and software.)

3 Disk Drive 810
1 Disk Drive: Percom Data w/ PS
4 Disk Drive: 1050
10 Power Supplies for disk drives, dattasettes, and Atari 800's
2 TV/Game Switch boxes
17 Data cables
3 Parallel printer interface
2 Video to TV converters
2 Video to monitor cables
2 RCA cables for TV
1 16k memory module for 800
3 Datasette 1010
2 Computer power supplies
4 Atari 800 computers
2 Daisywheel printer 1027
1 Atari 800XL computer
3 Atari 850 serial interface
1 Atari 600XL computer
2 Atari 1200XL computer
2 Atari 410 datasettes with p/s and data cable
1 Modem 1030 w/ p/s
2 Hayes smartmodem power supplies (no modem though)

1 Indus GT disk drive

And then there are mounds of disks, catridges, and manuals. Most is for the 8bit systems, but there is a box full of Atari ST software too.

>there some reason why turning the hard drive on and off would do this?
As you may have figured out by now, it is not a good idea to power up or down your hand drive while the ST is runing. You have trashed your FAT (file allocation table) at best, if not your hard drive partition information. If you run Diemond Edge, Cleanup, or Hard Disk Sentry on the drive, you may be able to restore your data. If not, I hope you have a recent backup. Your only alternative is to repartition the hard drive and start over (here is where owning Diamond Back and using it regularly becomes worth the $$$ invested).

Good luck!

Bob

You might get more responses if you could work something into the Subject field of your message, e.g. info on Atari ST needed. Also, if you could indicated the model you have it would help also - look on the top of the case. Should say STfm STEfm or something like that.

For a good overview of what's available for the ST (or any Atari computer) give Toad Computers a call (1-800 448-8623 email info@toad.net and ask for their catalog or visit their web page http://www.toad.net). They're not the only dealers in the world, but a great place to start.

I may have an extra manual laying around at home or something which might help you. There's also a very good intro to the ST book available - you might ask Toad about that also - I might have it at home - can't remember.

Anyway, hope this gives you a start. There is plenty of help on this newsgroup and lots of other places. Genie has a very active Atari group also.

> Whats the difference between the 68882 and 68881 ??? Sysinfo suggests
> that the FPU fitted is an SFP004 or compatible (something I'd never
> come across until you mentioned it).

Computation wise, the '882 is faster. But not by much, in my experience.
(awaiting flamemail on that point)

The '881 and '882 are completely compatible software wise, so code
written for the '882 will run correctly on the older '881. AS LONG AS THE
SOFTWARE IS PURELY USER-MODE SOFTWARE.

However, it does not work so well if the software happens to be _system_
software, which must be run in SUPERVISOR mode. A number of changes were
made to the exception structures that the '882 produces that makes code
written for the '881 misbehave.

(I don't have my CPU book here with me, but I believe that what I have
written above is accurate)

Source record: 153655

I have the following three midi-related programs for sale. They are all for use with an Atari ST. I have the original disks and docs for each program. The prices below include shipping, and I will entertain group-purchase price-savings.

If you are interested in any of the programs, or have questions about any of the three, feel free to send me email at: ggreenbe@mailbox.syr.edu.

Thanks,
Gerry

****
Dr. T's OmegaII -- $40. Billed as the "complete desktop midi composition system", the package includes two sequencers (KCS and Tiger), a Mixer, Song Editor, and QuickScore (a music notation display and printing utility). The programs can be run simultaneously using Dr. T's Multi Programming Environment (if you have enough memory...2.5 meg allows Omega to load KCS, Tiger, Mixer and Song Editor when you start up).

CZ Android -- $20. This is a Casio Synthesizer Voice Patch Librarian/Editor/Generator Program for the ST. The software will work with the following Casios: CZ101, CZ1000, CZ3000, CZ5000, CZ1, and CZ230S.

MidiPlay -- $20. This is a "real-time midi record/playback system simultaneously supporting all 16 channels of midi information including velocity ("touch"), pitch bend, program changes and pedal data. [It] has the capacity to store 250,000 midi note/events -- approximately 3 hours of music -- in a megabyte of RAM." "Runs on color and monochrome monitors and when using a TV as a monitor."

Thank you so much, Peter. I'm sure that your explanation is of great
value for all of us. Now we know that the troublemaker is neither STIK
nor CAB but CAB.OVL!! Thank you so much!!!
There's just a tiny little thing remaining: Could you please tell us
how to solve the problem we are facing with CAB.OVL? It says that it
can't load CACHE/0000001'....

I> old disks are fading and I am frantically copying them on new disks
I> but this is a costly and time consuming job. Isn't there a cd-rom
I> outthere with atari software/shareware?
Hi,
I can help. I have 3 Atari CD's from England and I would be delighted to
let you borrow or use my 3 CD's :- Transmission (Falcon mostly), Gemini and
the Whiteline Gamma PD CD's. You can also buy your own from England. I can
give you addresses if you like. I should also be getting my CD Writer back
from a friend in February. Anyone else who wishes to access these CD's and
lives within easy distance of the Hague can copy any of the PD from these CD's
if they want.

>at all.

That's the best was you can do. Hsmodem is a very fast Driver
for HighSpeed Modems. you must MFP.PRG konfig. with SETTER.TTP
MFP.PRG needs some Parameters. Otherwise you have Problems.

>The same problems occured with RTS/CTS flow control on or off.

Your'em sure rts/cts is wired in your modemkable?
Please check this out.
Rts/Rts *must* be looked in the Modem- and Terminalsetup!
Lock the serial Speed between this Modem and your Atari
for this Tests to 19K2 or 38K4.

Please show me your Modemparameters / Setup

regards
Robert

>
```

Hi Guy...

Yes and yes. It seems whenever I run anything in vt52 then soon after exiting I get problems (normally a lockup, sometimes a reboot). It really is annoying. I have Ease and have switched off the terminal window for tos/ttp. Also I am running MagiC 4, and the most recent version of vt52 (1.8) is even worse than the older version (1.30) which I have reverted to because it is more stable.

Any thoughts?

I need just a keyboard. If ya got a dead 1040, I'll take the whole thing, but I just need the keyboard. Keys can be missing, but all keys and JS ports must work.

And to those I owe money, it's going out this monday! Um, all accept the guy from Ohio that I bought a HD from well over a year ago. I lost your address AGAIN! Even though the HD went to HD heaven, and the power suply had to be replaced, and the controller was quirky, the case is still cool! Every time I had money, something came up which needed attention. I really have to get everything squared away! I think I have...

4445. GDOS driver for HPDJ?

Newsgroup: comp.sys.atari.st
Date: 1995-12-30 00:00:00 UTC
From: andrew@ajrose.demon.co.uk
Message-ID: <820348260_OASIS_@ajrose.demon.co.uk>
Source record: 153664

Does anyone know where I might find an HP Deskjet GDOS driver? To clarify, I've never really bothered using GDOS, relying on Pagestream and Calligrapher which have their own built-in routines. I now want to print out some CAD designs from MasterCAD, but only have .SYS files for Epson and Atari laser printers.

If you know where I could find a suitable driver, or have one up and running, please e-mail me

Thanks

Andrew

PS I'm (naively?) assuming that for straight graphics printout (no fonts required) I need only find a driver and add it to my Assign.sys file (the one used by NVDI 2.51). Correct me if I'm wrong!

Is there anywhere on the net I can get these drivers for the IOmega ZIP-Drives, or do I have to somehow get onto GEnie? If anyone has them, I'd really appreciate it if they could send them to me so that I can try one of these things out. They're 4 times faster than my hard-disk, with half as long access time, that's pretty impressive :) (Although, I've only got a Megafile-30, so you can't expect too much :)

Surely they're not commercial... are they?

I don't know of an accessory Chess game, but if you use a multitasking
OS, you might try GNU Chess with the GEM interface. I think it's on aaue,
called gemchess.lzh or similar. This is the only one I can find that is
GEM friendly and runs under a multitasking OS.
If you use SingleTOS, then this will of course be little help, sorry.

AA> 530mb. I'd like to make an 800 mb partition. Is this possible ?
AA> Any help would be greatly appreciated.

Hi Arthur,
I haven't been able to go higher than 512MB per partition with SCSI-tools if I want to keep Cubase Audio-compatibility (8kB-sectors) and I doubt there is a way around it if Steinberg don't re-write the recording routines.
With 16kB-sectors it should be possible with 1GB partitions if I remember correctly, but these can't be used with Cubase Audio at all...
You can imagine how many partitions I've got :(

I have a beta version of Telnet that is almost ready for release, but I
am looking for beta testers. I'd like to know what the Atari community
thinks before I upload it to all the various sites around the world.

So, if you want to have a copy, there are two terms to the contract:

1) You _must_ tell me what you think. Please e-mail me at jbaumgar@coil.com
2) Don't distribute it yourself. I realize that no security precautions
have been taken by me, but please don't. I only want people who are
interested in beta testing to use it for now. There will be an official
release available in a week.

The file is located at http://www.coil.com/~jbaumgar/ai.html

Thanks!

From: Steph@wuss.demon.co.uk
Message-ID: <820289458_OASIS_@wuss.demon.co.uk>
Source record: 153844

On the subject of making WWW115 work:

1. Make sure you have 'enabled' STiK & have 'connected'. (Obvious, I know)
2. Now start CAB.APP
3. It should work!

Troubleshooting:

1. Set CAB to flush the cache on exit.
2. Exit, disconnect STiK, & start again.
3. If all else fails, reboot. Some crashes seem to lock the serial port.

Once you get your system running, you shouldn't face any more problems. Until
your next crash, that is.

Hope this helps.

It seems some moron has taken over channel Atari, made it invite only
and a maximum of 1 person, thus locking everyone else out,
I have spent the morning on channel#irchelp who although a very nice and
helpfull bunch couldent actually get the channel back, although they say
they will try when a net split occurs,

Meanwhile I started channel#atarist and channel#atari2 but no one
responded, perhaps a bit early,
it is now midday uk time, i will be back on around 6 hrs from now, if no
one else has sorted it out or started another channel, then I will start
channel#atarist again and see if anyone responds,

BTW if anyone finds out who has caused all this then leave a message
with ataribot for me, I would love there address ;))

Cheers......!ynoT

I've got DRI GEM somewhere at work. I'll have to dig it up.
I have flat out refused to abuse myself with WIN 95, and
O/S 2 felt a little cumbersom to me. But your right, with
GEM on top I may get out the O/S 2 CD again.

Thanks for the info

Mike

You should see MagicC Mac on my Quadra 900 with a DiiMo 040/50mhz and 128k CPU cache. According to GemBench, there is nothing faster (running TOS at least). I can't even stand to work on the Mac side. Even with the faster 040, the Mac OS is still slow. Adobe Photo Shop and Preimer are so slow you would think they are running on an 8088 :). DA's Vector, Papyrus, Atari Works, ImageCopy, Kobold, Phoenix, TrueImage all run BLISTERINGLY FAST. Some times I see smoke comming from the CPU box :). (Will the plug get me a copy of DA's Layout TC?). GT-LookII and Calamus SL on order! Is NEON ever going to get ported over to work under MagicC?

Mike

Source record: 153851

In <4bv76n$da4@osustat.mps.ohio-state.edu> David H Butler wrote:

>again. Maybe the drive itself has gone bad?

That was one way.

Secondly, use the "Kobold" Copy-Utilitiy and copy a lot of data/files
from "C" to an emty folder on any other Partition/Drive.
Kobold have a little Utility on his Disk, so you can
compare any Data between "C" and your Copyfolder after this Work.
(Use Kobold's TREE_CHK.PRG to compare any Data)

Write all the Files/Data back and compare again.
So you have a chance to lokate this problem.
Try again this Steps with Drive "D" ect..

You have this errors only on Drive C i think your
Drive in going down. (Better you make a Backup first)

Otherwise you must search this Problem in your SCSI/IDE-Hardware.

Use Ataris CHKDISK to check out this Drive!?

Hi, sorry for my english. (I'm learnig by Internet) :/
(Learning by doing) :-)

I managed to fix this problem, unfortunatly like Paul in the last reply
(hi Wo) I tried a few things at once, but hres the best bet,

Your CACHE is automaticaly set WRONG, in the latest versions, it is now
in megs and there are two options, Size, and Free, if size and free are
the same then you are knackered, size must be way larger than free, if
you are on a floppy system then more problems as it seems to be a minimum
of 1 meg cache and a minimum of 1 meg free which wont work?
Changing the above worked for me, sorry if its a load of bollocks to the
rest?

The people having the exact same problems, are you running a floppy or
hd set up, please list your cache settings,

If this helps or indeed you have sorted the problem, then please post how?

Hope something here helps :)

Cheers......!ynoT

4468. Questions about Falcon 030 Multimedia

Newsgroup: comp.sys.atari.st
Date: 1995-12-31 00:00:00 UTC
From: afn14016@freenet.ufl.edu
Message-ID: <4c52pf$kaj@huron.eel.ufl.edu>
Source record: 153675

The article I wrote for the ST Informer shows that the Falcon 030
can play true color FLH/FLC/FLI animations and long (4 minutes and longer)
audio samples.

The questions:

After you have an animation or digitised motion video and audio ready
how can they be linked together so that audio and video are played?
(other than the method I explained on ST Informer No 95)

Why there are AVI for IBM and Q-Time for MAC and nobody has develop
a similar format for atari computers?

The demo prg mouse.prg is an example of 50kHz audio and FLI video
played simultaneosly. Can anybody tell me hor to produce
and audio/video program.

We have Video Master and Expose but now we really need a way to
share the multimedia work we do with our ST's and Falcons. It would
be nice to produce AVI or MPEG-2 on the Atari computers.

I would appreciate any help with this as I am getting ready to
buy Expose for Apex Media on Falcon.

Thanks, Raymond

4470. Junior office drivers

Newsgroup: comp.sys.atari.st
Date: 1995-12-31 00:00:00 UTC
From: dickie@mistral.co.uk
Message-ID: <820413670_OASIS_@mistral.co.uk>
Source record: 153677

Does anybody know if there is available a Class 2.0 driver for Junior Office (as opposed to Class 2). I know I can use Class 2.0 with Coma, but I prefer Junior Office's way of composing faxes. My USR modem will only work with either Class 1 or 2.0, and the Class 1 driver with Junior Office seems to be not always reliable.

Regards,

Richard.

ad329@freenet.hamilton.on.ca (Chris Cracknell) writes:

>Is the newest version of 5-2-5, the one that supports Sound Desiger (ST)
>samples available yet? And if so, where?

The latest version of 525 is version 2.17, which supports now
Sound Designer. This version is not 'publically' available, because we
wait for the next big upload until version 2.2.

But anybody who desperately needs Sound Designer support can get the
version directly from me via email! Esp. if we get a registration ;-)

Version 2.2 should arrive in january, whith Yamaha tx16w and Wave adpcm
support.

Bye, Harald

>version of vt52 (1.8) is even worse than the older version (1.30)
>which I have reverted to because it is more stable.
>
>Any thoughts?

NOS does not work very well in a window. It takes quite a bit of
tweeking to make it do so (MagiC 2.0, VT52 1.30, Ease 3.1c, Oasis
1.33E) and even then it will still occasionally lock up. Worse, is
that it usually terminates normally but is virtually guaranteed to
lock the machine or cause a reboot at any time from a few seconds
after to hours after!

I have NOS installed twice. One works in a window so I can pull stuff
from the window to the clipboard. Needless to say, this can and does
cause problems, even though it is executed directly.

For normal use, I renamed NOS.TTP to NOS.PRG and installed it single
tasking which works reliably with the predefined command line:

-d G:\OASIS -s 40 startup.nos

where G:\OASIS is the default NOS directory to use (ie the path to
where the Oasis folder with NOS in lies).

It is not possible to get Oasis 1.33E to execute NOS directly. If it
is possible under Oasis 1.35E then try not doing so - true parallel
processes should be launched by shel_write() but I would hazard a
guess that Oasis uses Pexec() which will leave the AES at a loss to
find certain information aside from leaving MagiC confused about the

single/multi tasking status of the NOS child process.

Having installed NOS single tasking, execute it directly, not via Oasis. When NOS quits, execute Oasis then use the "Unbatch" option - hopefully this will work fine like it does for me.

Having got a reliable single tasking NOS, it is then possible to start trying to obtain a multitasking one but you must bear in mind that NOS is multitasking as well so it is perfectly possible there will always be conflicts.

4479. Help downloading ST files with Mac

Newsgroup: comp.sys.atari.st
Date: 1995-12-31 00:00:00 UTC
From: omeli002@maroon.tc.umn.edu
Message-ID: <omeli002-3112951308500001@dialup-10-c-44.gw.umn.edu>
Source record: 153686

I'd like to be able to download some utility that will enable my 1040STe CPU to recognize my external, Mega File 30, hard drive.The HD use to have a system on it that booted successfully until i deleted a file called SHDRIVER.SYS, and now i'm trying to revive the HD and am having problems.

I am DOS formatting a floppy on my Mac then downlodaing files from an Atari Archive with the Mac and Netscape.Sometimes, on the Mac side, i can use Stuffit Expander 3.5.2 or ZipIt 1.3.4 for .arc or .zip files.I can extract the files on the Mac side then transfer to Atari. Only the programs are not running. Sometimes i get TOS error #35...?

On the Atari side i'm try'in to use a basic "starter pak" for extracting various archived Atari files .zoo,.lzh,.arc,.zip,
e.t.c. The app. is called starter.tos and contains several archivers...
I'm still unable to extract any files....HELP !

Any thoughts,help,suggestions would be greatly appreciated.

Thanks !!!

4481. FS:COMPLETE Atari ST Mega4 System w/64 MIDI channels&Spectre GCR

Newsgroup: comp.sys.atari.st
Date: 1995-12-31 00:00:00 UTC
From: jerbil@Gramercy.ios.com
Message-ID: <jerbil-3112951545070001@ppp-35.ts-2.nyc.idt.net>
Source record: 153688

FS: COMPLETE Atari ST Mega4 System w/64 MIDI channels & Spectre GCR
==========
Great for MIDI musicians
(Price below)

A "COMPLETE SYSTEM" - NO add-ons needed - for someone "just getting
into" computers.

All items are in excellent condition. I used this system to produce a
number of musical albums, and, to develop several ST programs. I am
very fond of this ST but have been forced to use the Macintosh platform
due to my business and client compatibility (Mac OS 7.0 & higher).

Hardware Includes:

Atari St Mega 4 Computer (4 Megabytes on the board) - w/manual
TOS Operating System 1.4 (Installed) - w/manual
Atari Keyboard (w/Numeric keypad and F-keys)
Atari Mouse (rugged)
Alpha Data Mouse (a real "smooth" feel)
Internal Floppy Drive - Double Sided - 720K
One Golden Image External Floppy Drive - Double Sided - 720K - w/manual
14" Monochrome Monitor (Looks great. Fairly new.) - w/manual
Two Megafile 30's (a total of 60 Megabytes of Storage!) - w/manual
Seikosha SP-1000A 9-pin dot matrix printer (w/new ribbon andf manual)
Supra Modem 2400 (2400 Baud Modem) w/manual
Modem Port Switch Box (connects the Supra and Export simultaneously)
IDC 16-Mhz Accelerator Board (!please note-it's not installed!)
Spectre GCR cartridge & cable: MACINTOSH EMULATION!! (See:below)
All cables (MIDI if requested) included.

Music Hardware/Software:

E-Magic's EXPORT Box: Provides an additional 48 Midi Channels
Dr. T's KCS OMEGA Software w/manual (supports EXPORT box):
Keyboard Controlled Sequencer (KCS) w/MPE modules **
** The Interactive Graphic EditoR (T.I.G.E.R.)
** Midi Mixer
** XOR Patch Editing Program (from "Mark Of The Unicorn")
** "Song Building" Editor
** Tempo Master
** Text Mode Editor
** Time/Date Setter
(All MPE modules run WITH the KCS main program - very powerful.)

Atari programs/extras include:

Opus Spreadsheet - a Lotus type Spreadsheet w/Online help menus
Informer - A great database (loads comma separated text files)
Degas/Degas Elite/Seurat - easy-to-use drawing programs
EdHak 3.0 - a very versatile and powerful text editor
Page Stream (v 1.8) - the popular publishing program for the ST
Tons of DESK ACCESORIES and UTILITIES!!
100 blank floppy disks!!!

You get a Mac too!

Spectre GCR - Macintosh Emulation!
Reads Macintosh formatted disks.
Use Macintosh software that runs under system 6.0.8 or earlier:
- Filer Maker Pro (The best Database anywhere)*
- Word Perfect 3.0 (The best Word Pro anywhere)*
- Excel Spreadsheet (from Microsoft)*
*These 3 programs are installed for you to "test drive"
GCR supports the Seikosha Printer (and an Atari Laser if you get one).

Asking: $ 950

** You pay shipping. (I'm on Long Island,NY if you wish to "pick-up".) **

From: chriswil@southern.co.nz
Message-ID: <4c753o$hnr@orm.southern.co.nz>
Source record: 153691

Hi Everybody...

I am considering purchasing a Hewlett-Packard Deskjet 400 printer for use with DTP software. I use NVDI 3 for vector fonts on my Falcon, but have noticed that no driver for NVDI directly supports this printer. Does anyone own a DJ400, and is it possible to use this printer to the fullest of its capabilities (full dpi, colour upgrade etc...), with the current NVDI version I use (v3.01).

Thanks in advance for your replies...

Chris Wilkinson, secretary of the Canterbury Atari Computer Enthusiasts group, Christchurch, New Zealand.

Body handling: HTML body converted to readable text

Happy New Year !

I reckon Steph Taylor has sorted your '00000001' problem. Though I
haven't TRIED it myself (hey, it'd cost me a phone call), the DOCS
supplied with the programs seem to indicate that you MUST fire up stik
and get connected BEFORE you load up CAB.
While it is possible to connect from within CAB, CAB/OVL
works out whether or not you are connected when you first start the
browser, and sticks (oops!) with that. It's the most sensible method
from a programming point of view (though not too user-friendly).
In short, connect from the desktop then open CAB.
(It has just occurred to me that CAB probably takes a fair few seconds
to load from floppy, which is why some of you are trying to connect
from within. Sorry, people.)
I reckon that oughta solve the problem.

Can I try another one ? The message I read after Steph's said some
stuff about the caches. According to the DOCS again, this was wrong.
The 'Keep Free' option does not apply to the cache, it applies to the
disk (/partition). The 'Kept Free' is the amount of space that CAB
will leave empty on your disk, presumably for other programs' use.
e.g. Say you've got a 30MB disk, Cache size set to 10MB, Keep Free set
to 10MB. If your disk has 15MB of other programs and data on it, then
WWWCACHE should only grow to 5MB (total used = 20MB), in order to
keep 10MB free on the disk.
Ok, so you're on a floppy. It looks as though you should set Keep
Free to 0MB pretty sharpish!

(Irrelevently: In the dial.scr file, I have my dial code set to
AT&D0DTnumber
This (on Hayes-compatible modems) means that it is possible to reset,
via keyboard, button, or switch, without dropping the modem
connection and having to dial again. You then ENABLE stik before
loading the browser. Sometimes you still get the RESOLVING HOST
lock-up though. Have we solved that yet? Oh yeah, you may have to
turn your modem off to drop the connection. Watch those phone bills.)

Try 3. If the CAB author (Alexander Clauss, right?) reads this, then
may I congratulate him for fixing the
bug, which caused www115
to crash if it encountered
twice in a row. However, this
was often due to CAB interpreting
and

as
the same HTML tag. It looks like CAB only checks its recognised words up to the first space or '>', and this could cause problems if other HTML extentions are encountered. Suppose they introduce and result in everything being squeezed in the title line. Okay, daft example, but you get my point.
Another bug encountered, presumably due to the CAB / OVL interface: Two or three bomb crash at the end of receiving some document (or graphic). It has often saved to the cache already (as the highest number) and can be viewed successfully by using the FILE option. Sometimes whether or not you turn graphics on or off effects this crashing, and the same sites may crash on some sessions and not others. (I'm having trouble with Yahoo at the moment.)

Thanks for reading this far!

>hear people complaining about errors and blaming CAB although CAB
>obviously cannot be blamed ('cos it's simply not involved).

You are of course pretty much right but it seems to me that you did not actually
experience this problem as the immediacy of the error seems to rule out the
other parts. AFAIC CAB.OVL actually is the part that takes data to and from
CAB-STiK via the SLIP connection, however this error is reading from the cache
of previously visited sites, I understand that CAB (or maybe OVL) actually looks
into the cache to see if the site had been visited previously and if so loads it
up, this is before any connection appears to have been even attempted as you
click on OK in the URL box and up pops the error after a quick flicker on the
Hard Drive activity light. I might be completely wrong but I hope not, any
ideas???

Someone asked in this thread what it means to be thrown a "\"

Basically it is a humorous remark somebody might make if you forget to put the slash in front of an IRC command, and thus what you type is broadcasted to everybody. For example, if you are doing a whois or a private message, and you forget to use the slash to denote the IRC command, everybody on the channel will see what you were intending to do and it can be kind of embarassing. To humorously alert you to your error, people will toss you (give to you) a "\" (it might be the forward slash... I haven't used IRC in a long time).

Great! Easy, wasn't
it?

j> I don't have a comms program that supports a port speed of 38,400
:-

Don't fret. The prog may not have a box for setting 38400 but it will
support this speed if you are using RTS/CTS (almost certainly) and if you
have fast enough serial software installed (HSMODEM, MagiC
etc.).

You won't really se it in action until you do a download (or whatever) and
have a measure of the overall transfer
rate.

You do have a 28.8K modem, do you? You are unlikely to see much difference
if the DTE is 14400 or
below.

4496. GDOS driver for HPDJ?

Newsgroup: comp.sys.atari.st
Date: 1995-12-31 00:00:00 UTC
From: hsideras@mettav.demon.co.uk
Message-ID: <6744_hsideras@mettav.demon.co.uk>
Source record: 153703

Hi Andrew, on 30 Dec 95 you wrote:

a>
a> Does anyone know where I might find an HP Deskjet GDOS driver? To
a> clarify, I've never really bothered using GDOS, relying on Pagestream
a> and Calligrapher which have their own built-in routines. I now want to
a> print out some CAD designs from MasterCAD, but only have .SYS files for
a> Epson and Atari laser printers.
a>
a> If you know where I could find a suitable driver, or have one up and
a> running, please e-mail me

Sorry if I'm being dense, but while Calligrapher has its own built-in
routines for GDOS I'm under the impression that the .SYS drivers are entirely
GDOS compatible. This is backed up by the fact that STFAX uses the exact
same driver for ordinary GDOS and Calligrapher.

So, I think the answer to your question is that you'll find the GDOS driver
you want on your Calligrapher master disk.

a> PS I'm (naively?) assuming that for straight graphics printout (no fonts
a> required) I need only find a driver and add it to my Assign.sys file
a> (the one used by NVDI 2.51). Correct me if I'm wrong!

I think so...

There are several ways to do so. But the easiest is probably just
using CAB (WWW116.ZIP). It stores them in the cache folder.
Names are XXXXXXXX.GIF mostly.
